

1. The points  $A$ ,  $B$  and  $C$  have position vectors  $3\mathbf{i} - 4\mathbf{j} + 2\mathbf{k}$ ,  $-\mathbf{i} + 6\mathbf{k}$  and  $7\mathbf{i} - 4\mathbf{j} - 2\mathbf{k}$  respectively.  $M$  is the midpoint of  $BC$ .

(a) Show that the magnitude of  $\overline{OM}$  is equal to  $\sqrt{17}$ . [2]

(b) Point  $D$  is such that  $\overline{BC} = \overline{AD}$ . Show that position vector of the point  $D$  is  $11\mathbf{i} - 8\mathbf{j} - 6\mathbf{k}$ . [3]

2. The equations of two lines are

$$\mathbf{r} = \begin{pmatrix} 3 \\ 0 \\ 2 \end{pmatrix} + \lambda \begin{pmatrix} 1 \\ 1 \\ 3 \end{pmatrix} \text{ and } \mathbf{r} = \begin{pmatrix} -1 \\ 8 \\ 2 \end{pmatrix} + \mu \begin{pmatrix} -3 \\ 1 \\ -5 \end{pmatrix}.$$

Find the coordinates of the point where these lines intersect. [4]

3. (i) Write down a vector equation of the line through the points  $A(5, 1, 9)$  and  $B(8, 7, 15)$ . [1]

$P$  is the point  $(11, -2, 15)$ .

(ii) Show that triangle  $APB$  is isosceles and find angle  $PAB$ . [4]

The point  $D$  lies on the line through  $A$  and  $B$ . Angle  $PAD =$  angle  $PDA$ .

(iii) Find the coordinates of  $D$ . [4]

4. Points  $A$ ,  $B$  and  $C$  have position vectors  $\begin{pmatrix} 1 \\ 2 \\ 3 \end{pmatrix}$ ,  $\begin{pmatrix} 2 \\ -1 \\ 5 \end{pmatrix}$  and  $\begin{pmatrix} -4 \\ 0 \\ 3 \end{pmatrix}$  respectively.

(a) Find the exact distance between the midpoint of  $AB$  and the midpoint of  $BC$ . [4]

Point  $D$  has position vector  $\begin{pmatrix} x \\ -6 \\ z \end{pmatrix}$  and the line  $CD$  is parallel to the line  $AB$ .

(b) Find all the possible pairs of  $x$  and  $z$ . [4]

5. The points  $A$  and  $B$  have position vectors  $\begin{pmatrix} 1 \\ -2 \\ 5 \end{pmatrix}$  and  $\begin{pmatrix} -3 \\ -1 \\ 2 \end{pmatrix}$  respectively.

(a) Find the exact length of  $AB$ . [2]

(b) Find the position vector of the midpoint of  $AB$ . [1]

The points  $P$  and  $Q$  have position vectors  $\begin{pmatrix} 1 \\ 2 \\ 0 \end{pmatrix}$  and  $\begin{pmatrix} 5 \\ 1 \\ 3 \end{pmatrix}$  respectively.

(c) Show that  $ABPQ$  is a parallelogram. [3]

6. The points  $A$ ,  $B$  and  $C$  have position vectors  $\mathbf{a}$ ,  $\mathbf{b}$  and  $\mathbf{c}$ , relative to an origin  $O$ , in three dimensions. The figure  $OAPBSCTU$  is a cuboid, with vertices labelled as in the following diagram.  $M$  is the midpoint of  $AU$ .

Prove that the lines  $OM$  and  $AS$  intersect, and find the position vector of the point of intersection. [9]

7. Points  $A$  and  $B$  have position vectors  $\mathbf{a}$  and  $\mathbf{b}$ . Point  $C$  lies on  $AB$  such that  $AC : CB = p : 1$ .

(a) Show that the position vector of  $C$  is  $\frac{1}{p+1}(\mathbf{a} + p\mathbf{b})$ . [3]

It is now given that  $\mathbf{a} = 2\mathbf{i} + 3\mathbf{j} - 4\mathbf{k}$  and  $\mathbf{b} = -6\mathbf{i} + 4\mathbf{j} + 12\mathbf{k}$ , and that  $C$  lies on the  $y$ -axis.

(b) Find the value of  $p$ . [4]

(c) Write down the position vector of  $C$ . [1]

		and hence $ABPQ$ is a parallelogram (AG)	A1 (AO 2.2a)	<div style="border: 1px solid black; padding: 5px; display: inline-block;"> <p>stated Both statements needed, dep M1M1</p> </div> <div style="text-align: right; padding-right: 10px;"> <p>Vectors</p> </div>
			[3]	<p><u>Examiner's Comments</u></p> <p>Only a minority of candidates answered this question in the most efficient way, using the vector forms of one pair of sides. Many found the vector forms of both pairs of sides. Then they commented either that <u>both</u> pairs consisted of two parallel lines, or they found the lengths of all four sides and commented that both pairs consisted of lines of equal length. Some candidates found the vector form for two opposite sides and then stated that because these two sides are parallel, <math>ABPQ</math> is a parallelogram. A few candidates made sign errors while finding vectors. Some did not use correct vector notation. Some candidates (quite reasonably) replaced the column vector notation by the <b>i, j, k</b> notation. Some candidates discussed the "gradients" of opposite sides.</p>
