

# Mark Scheme (Results)

Summer 2019

Pearson Edexcel International Advanced Level  
In Statistics S1 (WST01/01)

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## PEARSON EDEXCEL IAL MATHEMATICS

### General Instructions for Marking

1. The total number of marks for the paper is 75
2. The Edexcel Mathematics mark schemes use the following types of marks:
  - **M** marks: Method marks are awarded for ‘knowing a method and attempting to apply it’, unless otherwise indicated.
  - **A** marks: Accuracy marks can only be awarded if the relevant method (**M**) marks have been earned.
  - **B** marks are unconditional accuracy marks (independent of **M** marks)
  - Marks should not be subdivided.
3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
- ft – follow through
- the symbol  $\surd$  will be used for correct ft
- cao – correct answer only
- cso - correct solution only. There must be no errors in this part of the question to obtain this mark
- isw – ignore subsequent working
- awrt – answers which round to
- SC: special case
- oe – or equivalent (and appropriate)
- d... or dep – dependent
- indep – independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper or ag- answer given
- $\square$  or d... The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
6. Ignore wrong working or incorrect statements following a correct answer.

**Special notes for marking Statistics exams (for AAs only)**

- If a method leads to "probabilities" which are greater than 1 or less than 0 then M0 should be awarded unless the mark scheme specifies otherwise.
- Any correct method should gain credit. If you cannot see how to apply the mark scheme but believe the method to be correct then please send to review.
- For method marks, we generally allow or condone a slip or transcription error if these are seen in an expression. We do not, however, condone or allow these errors in accuracy marks.
- If a candidate is "hedging their bets" e.g. give Attempt 1...Attempt 2...etc then please send to review.

Question Number	Scheme	Marks
<p><b>1 (a)</b></p> <p><b>(b)</b></p> <p><b>(c)(i)</b></p> <p><b>(ii)</b></p>	$\bar{x} = \frac{58}{40} = \underline{\underline{1.45}}$ $\sigma^2 = \frac{84.829}{40} - 1.45^2$ $= 0.018225 \quad = \text{awrt } \underline{\underline{0.0182}}$ <p>New mean = <u>145</u></p> <p>New <math>\sigma = \underline{\underline{13.5}}</math></p> <p><b>Reason</b> e.g. mean of two extra children is the same as the original mean  <b>Conclusion</b> the mean is therefore unchanged or = <u>145</u></p> <p><b>Reason</b> e.g. extra children <u>more than 1 sd</u> from mean so increased spread  <b>Conclusion</b> therefore standard deviation will increase</p>	<p>B1</p> <p>M1</p> <p>A1</p> <p>(3)</p> <p>B1ft</p> <p>B1</p> <p>(2)</p> <p>M1</p> <p>A1</p> <p>M1</p> <p>A1</p> <p>(4)</p> <p><b>[9]</b></p>
<b>Notes</b>		
<p><b>(a)</b></p> <p><b>(b)</b></p> <p><b>(c)(i)</b></p> <p><b>(ii)</b></p>	<p>B1 for a correct mean (accept an exact fraction)  M1 for a correct expression for <math>\sigma^2</math> (or <math>s^2</math>) (ft their mean and condone inside square root)  A1 for awrt 0.0182 (NB <math>s^2 = 0.0186923\dots</math> awrt 0.0187)<b>Correct ans only</b> 2/2 [No fraction]</p> <p>1<sup>st</sup> B1ft for new mean = 145 <u>or</u> 100×their <math>\bar{x}</math>  2<sup>nd</sup> B1 for new s.d. = awrt 13.5 (accept <math>s = 13.6719\dots</math> or awrt 13.7)</p> <p>1<sup>st</sup> M1 for a suitable reason. May see recalculation e.g. <math>\frac{"145" \times 40 + 130 + 160}{42}</math> (o.e.)  e.g. “both 15 away from the mean” <u>or</u> “both same distance from the mean” <u>or</u> “mean of new values is 145 <u>or</u> the same”</p> <p>1<sup>st</sup> A1 for 145 or 1.45 or “no change” but M1 must be seen  [no further comment needed if answer matches their (b) or (a)]</p> <p>2<sup>nd</sup> M1 for a suitable reason but must have idea that the “gap” (= 15) &gt; 1 st. dev. [ft <math>\sigma &lt; 15</math>]  2<sup>nd</sup> A1 for stating standard deviation will be <u>greater</u> (o.e.) [M1 must be seen]</p> <p><b>Calculations</b> (You may see)  e.g. <math>\Sigma y^2 = 84.829 + 1.3^2 + 1.6^2 = 89.079</math> leading to <math>\sigma = \sqrt{0.01842\dots} = 0.13575\dots</math> or <u>13.6</u> (cm)  <u>or</u> <math>\frac{89.079}{42} = 2.1209\dots &gt; \frac{84.829}{40} = 2.1207\dots</math> but <math>\frac{\Sigma x}{n}</math> stays the same so <math>\sigma</math> greater  <b>BUT</b> M0A0 unless we see mention of 15 (cm) or 1.5 (m) being more than 1 sd</p>
