## INTERNATIONAL A LEVEL

## Statistics 3

## Exercise 6A

$1 \mathrm{H}_{0}$ : There is no difference between the observed and expected distributions.
$\mathrm{H}_{1}$ : There is a difference between the observed and expected distributions.
2 a $H_{0}$ : The observed data are drawn from a discrete uniform distribution. (The dice is fair.)
$\mathrm{H}_{1}$ : The observed data are not drawn from a discrete uniform distribution. (The dice is not fair.)
b The observed and expected results are:

| Number, $n$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Observed $\left(\boldsymbol{O}_{\boldsymbol{i}}\right)$ | 27 | 33 | 31 | 28 | 34 | 27 |
| Expected $\left(\boldsymbol{E}_{\boldsymbol{i}}\right)$ | 30 | 30 | 30 | 30 | 30 | 30 |
| $\frac{\left(\boldsymbol{O}_{\boldsymbol{i}}-\boldsymbol{E}_{i}\right)^{2}}{\boldsymbol{E}_{\boldsymbol{i}}}$ | 0.3 | 0.3 | 0.033 | 0.133 | 0.533 | 0.3 |

$X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=1.6$
3 a $\mathrm{H}_{0}$ : The observed data are drawn from a discrete uniform distribution.
$\mathrm{H}_{1}$ : The observed data are not drawn from a discrete uniform distribution.
b If the distribution of students is uniform then each year group would be expected to have:

$$
\frac{750}{5}=150 \text { students }
$$

c The observed and expected results are:

| Year | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Observed $\left(\boldsymbol{O}_{\boldsymbol{i}}\right)$ | 190 | 145 | 145 | 140 | 130 |
| Expected, $\boldsymbol{E}_{\boldsymbol{i}}$ | 150 | 150 | 150 | 150 | 150 |
| $\frac{\left(\boldsymbol{O}_{\boldsymbol{i}}-\boldsymbol{E}_{i}\right)^{2}}{\boldsymbol{E}_{i}}$ | 10.667 | 0.167 | 0.167 | 0.667 | 2.667 |

$X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=14.33$
4 a The observed and expected results are:

| Mutation present | Yes | No |
| :--- | :---: | :---: |
| Observed $\left(\boldsymbol{O}_{\boldsymbol{i}}\right)$ | 117 | 43 |
| Expected $\left(\boldsymbol{E}_{\boldsymbol{i}}\right)$ | 120 | 40 |

b $\quad \mathrm{H}_{0}$ : The underlying probability of 'Yes' is 0.75 .
$\mathrm{H}_{1}$ : The underlying probability of 'Yes' is not 0.75 .

## INTERNATIONAL A LEVEL

## Statistics 3

4 c $X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=\frac{3^{2}}{120}+\frac{3^{2}}{40}=0.3$
5 a The observed and expected results are:

| Result | H | T |
| :--- | :---: | :---: |
| Observed $\left(\boldsymbol{O}_{\boldsymbol{i}}\right)$ | 28 | 22 |
| Expected $\left(\boldsymbol{E}_{\boldsymbol{i}}\right)$ for fair coin | 25 | 25 |
| Expected $\left(\boldsymbol{E}_{\boldsymbol{i}}\right)$ for biased coin | 30 | 20 |

b For fair coin:

$$
X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=\frac{3^{2}}{25}+\frac{3^{2}}{25}=0.72
$$

For biased coin:

$$
X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=\frac{2^{2}}{30}+\frac{2^{2}}{20}=0.33
$$

c The value of $X^{2}$ is greater for the fair coin so it is more likely that John has been using the biased coin.

6 The observed and expected results are:

| BMI profile | Underweight | Normal | Overweight | Obese |
| :--- | :---: | :---: | :---: | :---: |
| Observed $\left(\boldsymbol{O}_{\boldsymbol{i}}\right)$ for men | 4 | 70 | 80 | 46 |
| Expected $\left(\boldsymbol{E}_{\boldsymbol{i}}\right)$ | 4 | 70 | 72 | 54 |
| $\frac{\left(\boldsymbol{O}_{\boldsymbol{i}}-\boldsymbol{E}_{\boldsymbol{i}}\right)^{2}}{\boldsymbol{E}_{\boldsymbol{i}}}$ | 0 | 0 | 0.889 | 1.185 |
| Observed $\left(\boldsymbol{O}_{\boldsymbol{i}}\right)$ for women | 6 | 81 | 65 | 48 |
| Expected $\left(\boldsymbol{E}_{\boldsymbol{i}}\right)$ | 4 | 70 | 72 | 54 |
| $\frac{\left(\boldsymbol{O}_{\boldsymbol{i}}-\boldsymbol{E}_{\boldsymbol{i}}\right)^{2}}{\boldsymbol{E}_{\boldsymbol{i}}}$ | 1 | 1.729 | 0.681 | 0.667 |

For men:

$$
X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=2.074
$$

For women:

$$
X^{2}=\sum \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}=4.076
$$

The men have a lower $X^{2}$ statistic so more closely match the English distribution.
