## General Certificate of Secondary Education June 2013

## **Mathematics**

43603H

**Unit 3 Higher tier** 

# Final

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for standardisation each examiner analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from: aqa.org.uk

#### Copyright

AQA retains the copyright on all its publications. However, registered centres for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to centres to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

### **Glossary for Mark Schemes**

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

М	Method marks are awarded for a correct method which could lead to a correct answer.
Α	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
В	Marks awarded independent of method.
Q	Marks awarded for Quality of Written Communication
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded within the scheme for a common misinterpretation which has some mathematical worth.
Mdep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent.
	eg, accept 0.5 as well as $\frac{1}{2}$
[ <i>a</i> , <i>b</i> ]	Accept values between $a$ and $b$ inclusive.
3.14	Allow answers which begin 3.14 eg 3.14, 3.142, 3.149.
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

#### Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

#### Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a candidate has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the candidate. In cases where there is no doubt that the answer has come from incorrect working then the candidate should be penalised.

#### Questions which ask candidates to show working

Instructions on marking will be given but usually marks are not awarded to candidates who show no working.

#### Questions which do not ask candidates to show working

As a general principle, a correct response is awarded full marks.

#### Misread or miscopy

Candidates often copy values from a question incorrectly. If the examiner thinks that the candidate has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

#### **Further work**

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

#### Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

#### Work not replaced

Erased or crossed out work that is still legible should be marked.

#### Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

#### Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

PMT

### Unit 3 Higher Tier

Q	Answer	Mark	Comments
1	$\pi \times 3.5 \times 3.5$ or $3.14 \dots \times 3.5 \times 3.5$	M1	ое
	or $\pi \times 3.5^2$ or $3.14 \ldots \times 3.5^2$		
	38.4(8) or 38.4(6)	A1	$\frac{49}{4}\pi$ or 12.25 $\pi$ or 12.3 $\pi$
	38.5	B1 ft	ft their answer of 2 d.p. or more

2	<i>x</i> + 2 <i>x</i> + 90 + 138	M1	oe
	or states angles in quadrilateral = 360		Attempts to subtract from 360
	x + 2x + 90 + 138 = 360 or $360 - 90 - 138$ or 132 seen	M1dep	oe
	x + 2x = 360 - 90 - 138 or $3x =$ their 132 or their 132 $\div$ 3	M1dep	oe
	44	A1	

3a	Correct reflection (1, -3), (1, -5), (5, -3)	B2	B1 for triangle reflected in line $x = -1$ B1 for triangle reflected in line $y = c$ B1 for correct points without the triangle drawn
3b	Rotation	B1	
	90(°) clockwise	B1	ое
			270(°) anticlockwise
			Accept $\frac{1}{4}$ turn clockwise
	Origin, O or (0, 0)	B1	Oe

Q	Answer	Mark	Comments
4	7.6 × 2.4	M1	
	18.24 or 18.2	A1	
	18	B1 ft	ft their area provided at least 1 d.p. shown
	30 + 10 × their 18	M1	Oe
	210	A1 ft	ft their area
			212.40 or 212 implies M1A1B0M1A1ft
			212.4 implies M1A1B0M1A0

Q	Answer	Mark	Comments
5a	2.2	B1	
5b	1000 grams = 1 kg seen or implied	M1	1 ÷ 2.2 (= 0.45 kg) (= 1 pound)
	(1 pound =) 1000 ÷ 2.2 (= 454 … grams)	M1	(1 gram =) 2.2 ÷ 1000 (= 0.0022 pound)
