# GCSE <br> Mathematics (Linear) 

Higher Tier Paper 1
Mark scheme

43651H
November 2015

Version 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from aqa.org.uk

## AQA

## Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.
If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

| M | Method marks are awarded for a correct method which could lead <br> to a correct answer. |
| :--- | :--- |
| A | Accuracy marks are awarded when following on from a correct <br> method. It is not necessary to always see the method. This can be <br> implied. |
| B | Marks awarded independent of method. |
| ft | Follow through marks. Marks awarded for correct working <br> following a mistake in an earlier step. |
| SC | Special case. Marks awarded for a common misinterpretation <br> which has some mathematical worth. |
| M dep method mark dependent on a previous method mark being |  |
| awarded. |  |

Examiners should consistently apply the following principles

## Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

## Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a candidate has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the candidate. In cases where there is no doubt that the answer has come from incorrect working then the candidate should be penalised.

## Questions which ask candidates to show working

Instructions on marking will be given but usually marks are not awarded to candidates who show no working.

## Questions which do not ask candidates to show working

As a general principle, a correct response is awarded full marks.

## Misread or miscopy

Candidates often copy values from a question incorrectly. If the examiner thinks that the candidate has made a genuine misread, then only the accuracy marks ( $A$ or $B$ marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

## Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

## Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

## Work not replaced

Erased or crossed out work that is still legible should be marked.

## Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

## Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

## Paper 1 Higher Tier

| $\mathbf{Q}$ | Answer | Mark | Comments |
| :--- | :---: | :---: | :---: |

| $\mathbf{1}$ | Additional Guidance 2 |  |  |
| :---: | :--- | :--- | :--- |
|  | $145: 90: 45$ | No working, not <br> correct | M0 |
|  | $3+2+1=5$ <br> $270 \div 5=54$ <br> $162: 108: 54$ | M1, A0 <br> $270 \div 5=54$ <br> $162: 108: 54$ | M1ft |

| $\mathbf{Q}$ | Answer | Mark | Comments |
| :--- | :---: | :---: | :---: |

| 2 | $4 x-1=14 x$ <br> or $4 x-1=7 \times 2 x$ <br> or $\frac{4 x}{7}-2 x=\frac{1}{7}$ <br> or $\quad 2-\frac{1}{2 x}=7$ | M1 | Allow one error |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $10 x=-1$ <br> or $-\frac{10 x}{7}=\frac{1}{7}$ <br> or $2 x=-\frac{1}{5}$ | A1 | oe |  |
|  | $-\frac{1}{10}$ | A1ft | ft their equation error | at most 1 |
|  | Additional Guidance |  |  |  |
|  | $\frac{4 x}{7}-1=2 x,-\frac{10 x}{7}=1, x=-\frac{7}{10}$ |  |  | M1, A0 A1ft |
|  | $4 x-1=9 x,-5 x=1, \quad x=-\frac{1}{5}$ |  |  | M0 |
|  | $4 x-1=2 x+7$ |  |  | M0 |
|  | $\frac{4 x}{7}-1=2 x,-\frac{18 x}{7}=1, x=-\frac{7}{18}$ |  |  | M1, A0, <br> A1ft |
|  | $\frac{4 x-1}{2 x}=7, \quad \frac{1}{2 x}-2=-7, \quad \frac{1}{2 x}=-9, x=-\frac{1}{18}$ |  |  | $\begin{gathered} \text { M1, A0 } \\ \text { A0 } \end{gathered}$ |

| Q Answer | Mark | Comments |
| :---: | :---: | :---: | :---: |

| 5 | A point that lies on the circumference, <br> eg (4, 5), (10, 5), (7, 2), (7, 8) | B2 | B1 (4, y) or $(10, y)$ or $(x, 2)$ or $(x, 8)$ <br> B1 for 4 or 10 clearly shown as min or max <br> horizontal value <br> B1 for 2 or 8 clearly shown as min or max <br> vertical value |
| :--- | :--- | :--- | :--- |
|  | Additional Guidance |  |  |$|$

| $\mathbf{6 a}$ | 20 <br> or 20 out of 120 <br> or 20 in 120 | B1 | $\frac{20}{120}$ (oe) is B0 |
| :---: | :--- | :---: | :---: |

| Yes ticked | B1 | If boxes blank, yes may be implied by <br> wording |
| :--- | :--- | :--- | :--- |
| Valid reason eg <br> 1 should be (about) 20 (but it is much <br> lower) <br> or 6 should be (about) 20 (but it is <br> higher) <br> or 6 is much higher than 1 <br> or frequencies should be all (about) the <br> same | Q1 | oe Strand (i) <br> Only award if Yes ticked or implied |
|  | There are 4 ways to score the Q mark <br> Comparing frequency of 1 to 20 <br> Comparing frequency of 6 to 20 |  |
| Referring to significant difference between frequency of 1 and 6 <br> Referring to the fact that all frequencies should be the same |  |  |

| Additional Guidance 2 |  |  |  |  | B1 |
| :--- | :--- | :--- | :---: | :---: | :---: |
|  | Yes ticked and: | Q1 |  |  |  |
| 6 has above the average which is 20 | Q1 |  |  |  |  |
| 6 more, 1 a lot less | Lands more on 6. It should land on each side about the same number | Q1 |  |  |  |
| The range of results is too large on specific numbers (1,6) showing <br> there is something making it land on a 6 and not a 1 | Q1 |  |  |  |  |
| The frequency of landing on 6 is over 7 times the frequency of it landing <br> on 1. | Q1 |  |  |  |  |
| There is a large range of 33 between the highest and lowest frequency | Q1 |  |  |  |  |
| Because the frequency is not all the same so it isn`t fair | Q1 |  |  |  |  |
| Frequency should be the same for all numbers | Q1 |  |  |  |  |
| Lands more on 6 | Q0 |  |  |  |  |
| 6 has appeared as the mode number whereas 1 is the least amount | Q0 |  |  |  |  |
| Is heavier on number 6 | Q0 |  |  |  |  |
| Landed on 6 38 times | Q0 |  |  |  |  |
| All number are about average except 1 and 6 | Q0 |  |  |  |  |
| Answers should be more evenly spaced out | Q0 |  |  |  |  |
| Each time the number goes up, the frequency goes up | Q0 |  |  |  |  |
| Q Answer | Mark | Comments |
| :--- | :---: | :---: | :---: |

| 7 | Additional Guidance 2 |  |  |
| :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & 2 x+2=36 \\ & 2 x=38 \\ & x=19 \\ & 36,56,70,96 \\ & 63 \end{aligned}$ | Median correct but as last value evaluated wrongly, follow through mark is lost | $\begin{aligned} & \mathrm{MO} \\ & \mathrm{AO} \\ & \mathrm{AO} \\ & \mathrm{M1} \\ & \mathrm{AOft} \end{aligned}$ |
|  | $\begin{aligned} & 2 x+2+3 x-1=36 \\ & 3 x=39 \\ & x=13 \\ & 28,38,46,67 \\ & 42 \end{aligned}$ | Two errors in solving the equation | M1 <br> A0 <br> AOft <br> M1 <br> A1ft |
| Q Answer | Mark | Comments |
| :--- | :---: | :---: | :---: |
| 8a | $4 x-8-6+10 x$ | M1 | Four terms. Three terms correct. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $4 x-8-6+10 x$ | A1 | Fully correct |  |
|  | $14 x-14$ or $14(x-1)$ | A1ft | ft on M awarded and at most one error |  |
|  | Additional Guidance |  |  |  |
|  | $4 x-8-6-10 x,-6 x-14$ |  |  | $\mathrm{M} 1, \mathrm{~A} 0$ <br> A1ft |
|  | $4 x-8-6-10 x,-6 x-2$ |  |  | M1, A0 AOft |
|  | $4 x-6-6-10 x$ |  |  | M0 |
| 8b | $2 a(4 a+5 b)$ | M1 |  |
| :---: | :---: | :---: | :---: |
|  | $3(4 a+5 b)$ | M1 |  |
|  | $\frac{2 a}{3}$ | A1 | Answer only full marks |
|  | Additional Guidance |  |  |
|  | Answer can come from wrong work, eg$\frac{8 a^{2}+10 a b}{12 a+15 b}=\frac{18 a}{27}=\frac{2 a}{3}$ |  |  |
| Q | Answer | Mark | Comments |
| :--- | :---: | :---: | :---: |
| $\mathbf{9 a}$ | Total 100 so median 50(th) value or <br> $50.5($ th) value | M1 | Check diagram for indication of 50 or <br> cumulative totals |
| :---: | :--- | :---: | :--- |
|  | M1 | $18,42,74,94,100$ |  |
|  | A1 | oe accept $5.25-5.27$ |  |
| $\mathbf{9 b}$ | 20 in 6 to 7 bar so 6.8 is $\frac{4}{5}$ of $20=16$ <br> or $\frac{1}{5}$ of $20=4$ |  |  |
| :---: | :--- | :--- | :--- |
| Q Answer | Mark | Comments |
| :--- | :---: | :---: | :---: |
| $\mathbf{1 0 a}$ | 170 | B1 |  |
| :---: | :--- | :---: | :--- |
|  | Angle at centre twice angle at <br> circumference (or perimeter) (on same <br> arc) | B1 | Must mention centre and circumference |
| $\mathbf{1 0 b}$ | 54 | B1 |  |
| :---: | :--- | :---: | :--- |
|  | Opposite angles in cyclic quadrilateral <br> (add up to 180) | B1 | Must mention opposite and cyclic |
| 10c | $Z X Y$ stated or shown to be $90-63$ or 27 | M1 |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 27 | A1 | Answer only MOAO |  |
|  | Additional Guidance 1 |  |  |  |
|  | Correct answer is common from wrong Any indication of wrong working or wr |  | rrect working must be s marked is M0 | seen. |
|  |  |  | Assumes $Z X$ bisects $W Z Y$ and intersection of chords is a right angle | M0 |
| 10c | Additional Guidance 2 |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | $180-126=54$ $54 \div 2=27$ | Assumes $Z X$ bisects $W Z Y$ and triangle $W Z Y$ is isosceles | M0 |
|  |  |  | Assumes $W Z Y$ is a right angle and ZWP is isosceles. | M0 |
