

GCSE **Mathematics**

Paper 2 43652F Mark scheme

43652F June 2016

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from aqa.org.uk

Glossary for Mark Schemes

Q

Use of brackets

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

М	Method marks are awarded for a correct method which could lead to a correct answer.
A	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
В	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
M dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent. e.g. accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a ≤ value < b
3.14	Accept answers which begin 3.14 e.g. 3.14, 3.142, 3.1416

Marks awarded for quality of written communication

It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a candidate has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the candidate. In cases where there is no doubt that the answer has come from incorrect working then the candidate should be penalised.

Questions which ask candidates to show working

Instructions on marking will be given but usually marks are not awarded to candidates who show no working.

Questions which do not ask candidates to show working

As a general principle, a correct response is awarded full marks.

Misread or miscopy

Candidates often copy values from a question incorrectly. If the examiner thinks that the candidate has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

Work not replaced

Erased or crossed out work that is still legible should be marked.

Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

Continental notation

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the candidate intended it to be a decimal point.

	1				
	Alternative method 1				
22(b)	45 000 ÷ 1000 or 45	M1			
	45 ÷ 0.75 or 45 × 1.33 or their 45 ÷ 0.75	M1	oe eg 45 ÷ 3 × 4		
	60	A1			
	60 minutes or 60 min(s) or 1 hour or 1h(r)	Q1	Strand (i) Correct notation		
	Alternative method 2				
	0.75 × 1000 or 750	M1			
	45 000 ÷ 750 or 45 000 ÷ their 750	M1	oe		
()	60	A1			
	60 minutes or 60 min(s) or 1 hour or 1h(r)	Q1	Strand (i) Correct notation		
	Additional Guidance				
	For the Q mark 60 minutes or 1 hour	r must not co	me from incorrect working		
	Ignore fw after 60 minutes or 1 hour				
	Digit 6 implies M0M1 eg 60 000, 6000, 600, 6 or 0.6			M0M1	
	$750 \div 45\ 000 = 0.016$ (units would be minutes ⁻¹)			M1M0A0Q0	
	750 ÷ 45 000 = 0.016 and 0.016. (method is incorrect)	× 60 = 1 ho	our	M1M0A0Q0	
	Do not accept 60 m for the Q mark			M1M1A1Q0	

Q	Answer	Mark	Comments
	Alternative method 1		
	6:3:1 or 10 seen or implied	M1	oe Any order
	130 ÷ 10 × 6 or 78		
	or 130 ÷ 10 × 3 or 39	M1dep	
	or 130 ÷ 10 or 13		
	White 78		
	Brown 39	A1	
	Granary 13		
	Alternative method 2		
			oe
	6x + 3x + x = 130		eg $y + \frac{y}{2} + \frac{y}{6} = 130$
	or $10x = 130$	M1	_
			or $\frac{5y}{3} = 130$
23	130 ÷ 10 or 13	M1dep	oe
			eg 3 × 130 ÷ 5 or 78
	White 78		
	Brown 39	A1	
	Granary 13		
	Alternative method 3		
	A correctly evaluated trial where		eg
	white : brown : granary = 6 : 3 : 1	M1	(white =) 6, (brown =) 3, (granary =) 1, total 10
	A different correctly evaluated trial		eg
	where white : brown : granary = 6 : 3 : 1	M1dep	(white =) 12, (brown =) 6, (granary =) 2, total 20
	White 78 Brown 39	A1	
	Granary 13	/ \ 1
