Paper 1

For examination from 2020

SPECIMEN PAPER

2 hours

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages. Blank pages are indicated.

Mathematical Formulae**1. ALGEBRA***Quadratic Equation*

For the equation $ax^2 + bx + c = 0$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Binomial Theorem

$$(a+b)^n = a^n + \binom{n}{1}a^{n-1}b + \binom{n}{2}a^{n-2}b^2 + \dots + \binom{n}{r}a^{n-r}b^r + \dots + b^n,$$

where n is a positive integer and $\binom{n}{r} = \frac{n!}{(n-r)!r!}$

Arithmetic series

$$u_n = a + (n-1)d$$

$$S_n = \frac{1}{2}n(a+l) = \frac{1}{2}n\{2a + (n-1)d\}$$

Geometric series

$$u_n = ar^{n-1}$$

$$S_n = \frac{a(1-r^n)}{1-r} \quad (r \neq 1)$$

$$S_\infty = \frac{a}{1-r} \quad (|r| < 1)$$

2. TRIGONOMETRY*Identities*

$$\sin^2 A + \cos^2 A = 1$$

$$\sec^2 A = 1 + \tan^2 A$$

$$\operatorname{cosec}^2 A = 1 + \cot^2 A$$

Formulae for ΔABC

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$a^2 = b^2 + c^2 - 2bc \cos A$$

$$\Delta = \frac{1}{2}bc \sin A$$

1 DO NOT USE A CALCULATOR IN THIS QUESTION.

The polynomial $p(x) = 2x^3 - 3x^2 + qx + 6$ has a factor $x - 2$.

- (a) Show that $q = 0$. [1]

- (b) Factorise $p(x)$ completely and hence state all the solutions of $p(x) = 0$. [4]

2 Variables x and y are related by the equation $y = x\sqrt{x}$.

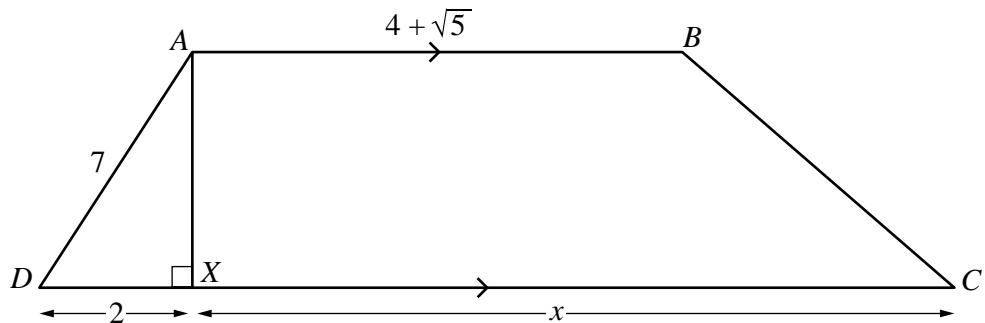

- (a) Find $\frac{dy}{dx}$. [2]

- (b) Hence find the approximate change in x when y increases from 8 to a small amount of 5. [3]

3 (a) Express $x^2 - 6x + 5$ in the form $(x - p)^2 + q$, where p and q are constants to be found. [3]

(b) Hence find the greatest value of $(x^2 - 6x + 5)^{-1}$ and state the values of x at which this occurs. [2]

4 DO NOT USE A CALCULATOR IN THIS QUESTION.

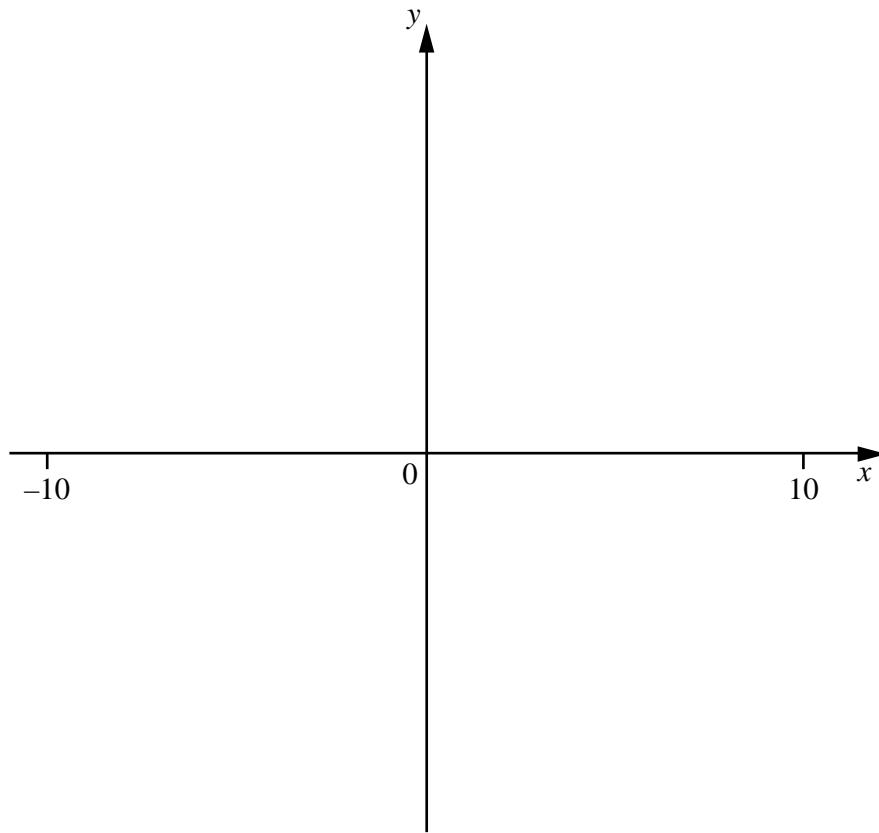

The diagram shows a trapezoid $ABCD$ in which $AD = 7$ cm and $AB = (4 + \sqrt{5})$ cm. AX is perpendicular to DC with $DX = 2$ cm and $XC = x$ cm.

Given that the area of trapezoid $ABCD$ is $\sqrt{5} + 2$ cm^2 , find an expression for x in the form $a + b\sqrt{5}$, where a and b are integers. [6]

6

- 5 (a) On the axes below, sketch the graph of $y = |2x + 5|$ and the graph of $y = |2 - x|$, stating the coordinates of the points where each graph meets the coordinate axes. [4]

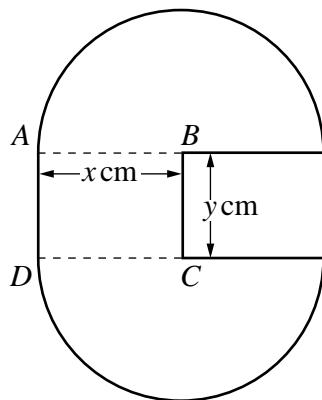

- (b) Solve $|2x + 5| \leq |2 - x|$. [3]

6 Find the equation of the normal to the curve $y = \frac{2x-1}{\sqrt{x^2+5}}$ at the point where $x=2$

Give your answer in the form $ax + by = c$, where a , b and c are integers.

[8]

The diagram shows a bag, made from sheet metal, consisting of two semi-circular pieces, centres B and C , each of radius x cm. They are attached to each other by a rectangular piece of sheet metal, $ABCD$, such that AB and CD are the radii of the semicircular pieces and $AD = BC = y$ cm.

- (a) Given that the area of the bag is 90 cm^2 , show that the perimeter, P cm, of the bag is given by

$$P = 2x + \frac{40}{x}.$$

[4]

9

- (b) Give **nt h t** **x can** **ry, f id h min mm** **x le** **6 P, j s tify g h t th s x le** **is a min mm .** [5]

10

8 (a) Give an answer in its simplest form if the exact value is

(i) $\int_{0.2}^1 e^{5x-1} dx,$ [4]

(ii) $\int_1^2 \left(x + \frac{1}{x^2} \right)^2 dx.$ [5]

(b) Find $\int \sin \frac{x}{6} dx.$ [2]

11

9 DO NOT USE A CALCULATOR IN THIS QUESTION.

In the expansion $(1+2x)^n$, the coefficient of x^4 is ten times the coefficient of x^2 .

Find the value of the positive integer n . [6]

12

- 10 (a) An arithmetic progression has a first term 6, 5 and common difference 6, 3.

Find the number of terms such that the sum to n terms is first less than 10.

[4]

- (b) A geometric progression has sum of its 3rd term is equal to $\frac{81}{64}$ and its 5th term is equal to $\frac{729}{1024}$.

(i) Find the first term of the progression and the common ratio of the progression. [5]

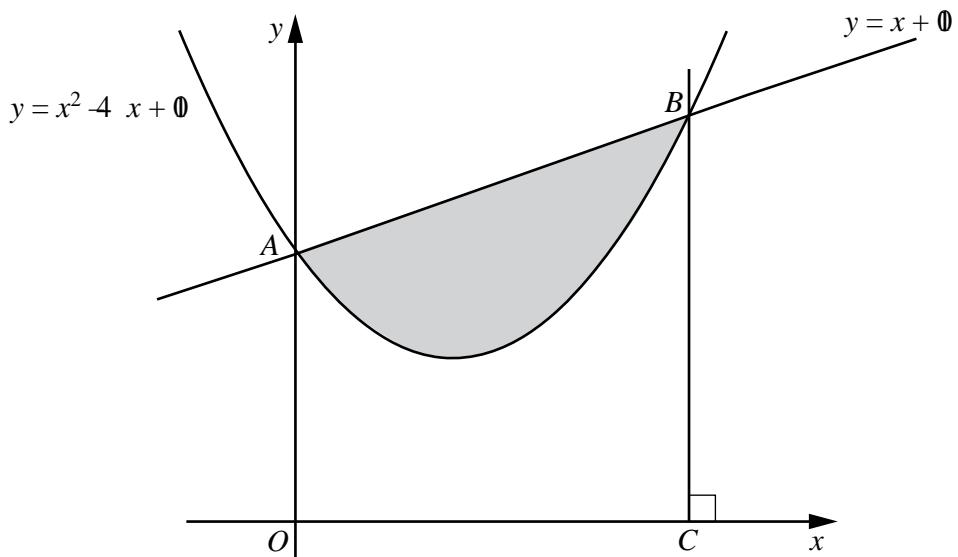

13

(ii) He ~~n~~ e fid ~~h~~ sm t~~a~~ f i in ty~~b~~ th s p ~~g~~ essin

[1]

14

11

The graph of $y = x^2 - 4x + 6$ cuts the y-axis at point A. The graph of $y = x^2 - 4x + 6$ and $y = x + 6$ intersect at points A and B. The line BC is perpendicular to the x-axis. Calculate the area of the shaded region bounded by the curve and the line AB. [8]
