## edexcel

# Mark Scheme (Results) 

November 2013

Pearson Edexcel GCSE
in Mathematics Linear (1MA0)
Higher (Non-Calculator) Paper 1H

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www. pearson.com/uk

## NOTES ON MARKI NG PRI NCI PLES

1 All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.

2 Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.

3 All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.

4 Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.

5 Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
6 Mark schemes will indicate within the table where, and which strands of QWC, are being assessed. The strands are as follows:
i) ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear

Comprehension and meaning is clear by using correct notation and labeling conventions.
ii) select and use a form and style of writing appropriate to purpose and to complex subject matter

Reasoning, explanation or argument is correct and appropriately structured to convey mathematical reasoning.
iii) organise information clearly and coherently, using specialist vocabulary when appropriate.

The mathematical methods and processes used are coherently and clearly organised and the appropriate mathematical vocabulary used.

## With working

If there is a wrong answer indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.
If working is crossed out and still legible, then it should be given any appropriate marks, as long as it has not been replaced by alternative work.
If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks. Send the response to review, and discuss each of these situations with your Team Leader.
If there is no answer on the answer line then check the working for an obvious answer.
Any case of suspected misread loses $A$ (and B) marks on that part, but can gain the $M$ marks. Discuss each of these situations with your Team Leader.
If there is a choice of methods shown, then no marks should be awarded, unless the answer on the answer line makes clear the method that has been used.

Follow through marks
Follow through marks which involve a single stage calculation can be awarded without working since you can check the answer yourself, but if ambiguous do not award.
Follow through marks which involve more than one stage of calculation can only be awarded on sight of the relevant working, even if it appears obvious that there is only one way you could get the answer given.

9 I gnoring subsequent work
It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: e.g. incorrect canceling of a fraction that would otherwise be correct
It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect e.g. algebra.
Transcription errors occur when candidates present a correct answer in working, and write it incorrectly on the answer line; mark the correct answer.

10 Probability
Probability answers must be given a fractions, percentages or decimals. If a candidate gives a decimal equivalent to a probability, this should be written to at least 2 decimal places (unless tenths).
Incorrect notation should lose the accuracy marks, but be awarded any implied method marks.
If a probability answer is given on the answer line using both incorrect and correct notation, award the marks.
If a probability fraction is given then cancelled incorrectly, ignore the incorrectly cancelled answer.

Linear equations
Full marks can be gained if the solution alone is given on the answer line, or otherwise unambiguously indicated in working (without contradiction elsewhere). Where the correct solution only is shown substituted, but not identified as the solution, the accuracy mark is lost but any method marks can be awarded.

## Parts of questions

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded in another.

## Range of answers

Unless otherwise stated, when an answer is given as a range (e.g 3.5-4.2) then this is inclusive of the end points (e.g 3.5, 4.2) and includes all numbers within the range (e.g 4, 4.1)

Guidance on the use of codes within this mark scheme

```
M1 - method mark
A1 - accuracy mark
B1 - Working mark
C1 - communication mark
QWC - quality of written communication
oe - or equivalent
cao - correct answer only
ft - follow through
sc - special case
dep - dependent (on a previous mark or conclusion)
indep - independent
isw - ignore subsequent working
```

| (c) | $x$ changed to $y$ <br> $x$ changed to $y$ | Standard mark scheme |  |

| PAPER: 1MA0_1H |  |  |  |
| :---: | :---: | :---: | :---: |
| Question |  | Modification | Notes |
| 6 | (a) <br> (b) | Move shape A two squares to the right. Cut left axis at -5 . 2 cm grid. <br> 2 cm grid. $x$ axis -6 to $+7 . y$ axis -3 to +7 . | B1 for correct shape in correct position <br> Standard mark scheme |
| Q11 |  | Remove $501-750 \mathrm{~g}$ row. | Standard mark scheme |
| Q12 |  | 2 cm grid. Axes drawn but not labelled | Standard mark scheme |
| Q18 | (c) | Change line so it goes through $(20,0)(50,20)(60,30)(70$, 40) $(80,60)(100,80)$. <br> $x$ axis 2 cm for $10, y$ axis 2 cm for 5 . <br> 28 seconds changed to 30 seconds. 96 seconds changed to 100 seconds. <br> Boxplot $x$ axis 3 cm for 10 in an intermediate line. | B1 for 70 (accept 68 to 72 ) <br> M1 for reading a value from graph at time $=60(=30$, accept 28 to 32$)$ M1 for ' 30 ' $\div 80 \times 100(=37.5)$ or $25 \div 100 \times 80(=20)$ C 1 (dep on M2) for correct decision based on their figures OR <br> M1 for $25 \div 100 \times 80(=20)$ <br> M1 for reading a value from graph at $\mathrm{cf}=20(=50$, accept 48 to 52$)$ <br> C 1 (dep on M 2 ) for correct decision based on their figures <br> B1 for ends of whiskers at 30 and 100 with a box <br> B1 ft for median at ' 70 ' inside a box <br> B1 for ends of box at 50 (accept 52 to 54) and 80 (accept 78 to 82 ) |

| Question |  | Modification | Notes |
| Q23 | Triangle A (the image) moved down 1 square. Triangle B <br> (the enlargement) given scale factor - $\frac{1}{2}$ centre ( $\left.0,-1\right)$. <br> Wording: ‘Describe fully the single transformation that will <br> map Triangle A onto Triangle B'. | B1 for enlargement scale factor $-\frac{1}{2}$ |  |
| B1 for (centre) $(0,-1)$ |  |  |  | Welsh Assembly Government
