

GCSE

Mathematics B

General Certificate of Secondary Education

Unit **J567/04**: Paper 4 (Higher Tier)

Mark Scheme for November 2012

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

J567/04

Mark Scheme

November 2012

Annotations used in the detailed Mark Scheme.

Annotation	Meaning
✓	Correct
✗	Incorrect
BOD	Benefit of doubt
FT	Follow through
ISW	Ignore subsequent working (after correct answer obtained), provided method has been completed
M0	Method mark awarded 0
M1	Method mark awarded 1
M2	Method mark awarded 2
A1	Accuracy mark awarded 1
B1	Independent mark awarded 1
B2	Independent mark awarded 2
MR	Misread
SC	Special case
^	Omission sign

These should be used whenever appropriate during your marking.

The **M**, **A**, **B**, etc annotations must be used on your standardisation scripts for responses that are not awarded either 0 or full marks.

It is vital that you annotate these scripts to show how the marks have been awarded.

It is not mandatory to use annotations for any other marking, though you may wish to use them in some circumstances.

Subject-Specific Marking Instructions

1. **M** marks are for using a correct method and are not lost for purely numerical errors.
A marks are for an accurate answer and depend on preceding **M** (method) marks. Therefore **M0 A1** cannot be awarded.
B marks are independent of **M** (method) marks and are for a correct final answer, a partially correct answer, or a correct intermediate stage.
SC marks are for special cases that are worthy of some credit.
2. Unless the answer and marks columns of the mark scheme specify **M** and **A** marks etc, or the mark scheme is 'banded', then if the correct answer is clearly given and is not from wrong working **full marks** should be awarded.

Do not award the marks if the answer was obtained from an incorrect method, ie incorrect working is seen and the correct answer clearly follows from it.

3. Where follow through (**FT**) is indicated in the mark scheme, marks can be awarded where the candidate's work follows correctly from a previous answer whether or not it was correct.

Figures or expressions that are being followed through are sometimes encompassed by single quotation marks after the word *their* for clarity, eg FT $180 \times (\textit{their} '37' + 16)$, or FT $300 - \sqrt{(\textit{their} '5^2 + 7^2')}$. Answers to part questions which are being followed through are indicated by eg FT $3 \times \textit{their} (a)$.

For questions with FT available you must ensure that you refer back to the relevant previous answer. You may find it easier to mark these questions candidate by candidate rather than question by question.

4. Where dependent (**dep**) marks are indicated in the mark scheme, you must check that the candidate has met all the criteria specified for the mark to be awarded.
5. The following abbreviations are commonly found in GCSE Mathematics mark schemes.
 - **figs 237**, for example, means any answer with only these digits. You should ignore leading or trailing zeros and any decimal point eg 237000, 2.37, 2.370, 0.00237 would be acceptable but 23070 or 2374 would not.
 - **isw** means **ignore subsequent working** after correct answer obtained and applies as a default.
 - **nfww** means **not from wrong working**.
 - **oe** means **or equivalent**.
 - **rot** means **rounded or truncated**.
 - **seen** means that you should award the mark if that number/expression is seen anywhere in the answer space, including the answer line, even if it is not in the method leading to the final answer.
 - **soi** means **seen or implied**.

6. In questions with no final answer line, make no deductions for wrong work after an acceptable answer (ie **isw**) unless the mark scheme says otherwise, indicated for example by the instruction 'mark final answer'.
7. In questions with a final answer line following working space,
 - (i) if the correct answer is seen in the body of working and the answer given on the answer line is a clear transcription error allow full marks unless the mark scheme says 'mark final answer'. Place the annotation ✓ next to the correct answer.
 - (ii) if the correct answer is seen in the body of working but the answer line is blank, allow full marks. Place the annotation ✓ next to the correct answer.
 - (iii) if the correct answer is seen in the body of working but a completely different answer is seen on the answer line, then accuracy marks for the answer are lost. Method marks could still be awarded. Use the M0, M1, M2 annotations as appropriate and place the annotation ✗ next to the wrong answer.
8. As a general principle, if two or more methods are offered, mark only the method that leads to the answer on the answer line. If two (or more) answers are offered, mark the poorer (poorest).
9. When the data of a question is consistently misread in such a way as not to alter the nature or difficulty of the question, please follow the candidate's work and allow follow through for **A** and **B** marks. Deduct 1 mark from any **A** or **B** marks earned and record this by using the MR annotation. **M** marks are not deducted for misreads.
10. Unless the question asks for an answer to a specific degree of accuracy, always mark at the greatest number of significant figures even if this is rounded or truncated on the answer line. For example, an answer in the mark scheme is 15.75, which is seen in the working. The candidate then rounds or truncates this to 15.8, 15 or 16 on the answer line. Allow full marks for the 15.75.
11. Ranges of answers given in the mark scheme are always inclusive.
12. For methods not provided for in the mark scheme give as far as possible equivalent marks for equivalent work. If in doubt, consult your Team Leader.
13. Anything in the mark scheme which is in square brackets [...] is not required for the mark to be earned, but if present it must be correct.

J567/04

Mark Scheme

November 2012

Question		Answer	Marks	Part Marks and Guidance	
1	(a)	$\begin{array}{ccccccc} 16 & 1 & 1 & 3 & 7 & 9 & \\ 17 & 0 & 0 & 1 & 2 & 6 & 7 & 9 \\ 18 & 0 & 4 & 5 & 5 & 8 & & \\ 19 & 1 & 3 & & & & & \end{array}$	3	M2 for correct ordered diagram with one error or omission OR M1 for correct ordered diagram with at most three errors or omissions or correct unordered diagram	161 etc counts as one error
	(b)	176	1		
2	(a)	7134 or 7130	2	M1 for $\frac{1}{2} \times 164 \times 87$ or 82×87	May be done in stages
	(b)	281.6 or 282	2	M1 for $\frac{1}{2} (14.8 + 20.4) \times 16$	May be done in stages
3	(a)	$6n - 2$ oe final answer	2	B1 for $6n$ seen eg $6(n - 1)$	Equivalents include $6(n - 1) + 4$ Condone other letters and $n6$ and $n \times 6$ for $6n$
	(b)	118	1	Correct or FT <i>their</i> linear expression in (a)	
4		3 nfw	4	M1 for $6 \div (1 + 3)$ or can be implied by 1.5 or 1500 M1 for <i>their</i> '1.5' $\times 3$ or 4.5 or 4500 seen M1 for <i>their</i> '4.5' – <i>their</i> '1.5' can be implied	6l could be 6000 (ml) accept any correct method Allow 3000 ml as answer

J567/04

Mark Scheme

November 2012

Question		Answer	Marks	Part Marks and Guidance	
5		Angle bisector of A correct and with two correct pairs of arcs and at least one line parallel to canal at a distance of 2 cm and at least one 5 cm horizontal line within a correct region	4	B2 for ruled angle bisector of A correct and with two correct pairs of arcs OR B1 for correct line but no construction or correct arcs with no correct line AND B1 for straight line parallel to canal at a distance of 2 cm either to the right or left AND B1 for straight 5 cm horizontal line within correct region	Tolerance is ± 2 mm for lengths and $\pm 2^\circ$ for angles <u>Overlay</u> : angle bisector needs to lie on or within the red lines Mark <u>best</u> parallel line on or within the green lines Ignore semicircles at the ends of the canal Mark <u>best</u> runway use end circles as tolerance by eye
6	(a)	7	1		Do not accept 6^7
	(b)	18	1	Penalise incorrect form once, see below	
	(c)	10	1	Penalise incorrect form once eg (a) 6^7 (b) a^{18} (c) p^{10} scores 0, 1, 1	
7		18.66	2	M1 for 2.56 or 0.45[7....] seen or for answer of 18.65[7...] or 18.7	

J567/04

Mark Scheme

November 2012

Question		Answer	Marks	Part Marks and Guidance	
8	(a)	0.14 oe	2	M1 for $1 - (0.38 + 0.17 + 0.31)$ implied by 14 and [0].14	0.24 is BOD for M1
	(b)	2.48[...] or 2.5	3	M1 for attempt at Σpf or 278 soi by eg 3 of these 26, 76, 72, 64, 40 with an attempt to add or answer of 238.3[5...] M1dep for <i>their</i> '278' \div (<i>their</i> ' Σf ' or 112)	Look for the correct answer in working if the answer has been rounded too much Σf implied by a number at the base of the frequency column, not 5 or 15
	(c) (i)	stopped	1	Accept any comment that implies a stop	
	(ii)	EF or return journey or 13 00 to 14 00	1		
	(d)	50 nfw or 49.99[9...]	2	M1 for either 885 or 835 seen	Condone 884.99[9...]

J567/04

Mark Scheme

November 2012

Question	Answer	Marks	Guidance
9*	This needs to be the correct answer of 24 with all correct unit conversions seen and all operations clearly communicated and with no errors.	5	Calculation : $\frac{\text{figs } 60}{(80 \times 500 \times \text{figs } 210 \times \text{figs } 297) \div (10^6 \times 10^3)} = 24.0500240\dots$
	This could be an answer of 24.05[.....] or incorrectly rounded with fully correct supporting working. or We need to see all 4 correct operations or 3 of the 4 correct operations and a correct unit conversion, eg $80 \times 500 \times [0].21[0] \times [0].297$ scores 4 marks as there are 3 correct operations and they have changed the mm^2 to m^2 by changing the two lengths correctly or $[0].08[0] \times 500 \times 210 \times 297$ also scores 4 marks as they have correctly converted the g to kg and there are 3 of the 4 operations correct .	4 - 3	We need to see 3 of the 4 correct operations or 2 of the 4 correct operations and a correct unit conversion, eg $500 \times [0].21[0] \times [0].297$ scores 3 marks because there are 2 correct operations and 1 correct unit conversion. or A final answer of 24 with insufficient correct working or no working.
	We need to see 2 of the 4 correct operations or 1 of the 4 correct operations and a correct unit conversion, eg $[0].21[0] \times [0].297$ scores 2 marks because there is 1 correct operation and 1 correct unit conversion.	2 - 1	We need to see 1 of the 4 correct operations or a correct unit conversion, eg $[0].21[0]$ and $[0].297$ seen scores 1 mark because there is 1 correct unit conversion, or 60 000 seen scores the mark or 80×500 scores 1 mark.
	No worthwhile work attempted.	0	Answer 24 from completely wrong work scores 0

J567/04

Mark Scheme

November 2012

Question	Answer	Marks	Part Marks and Guidance
10	No with a complete argument eg $(66 \div 12) = 5.5$ leading to $100 \times 5.5 = 550$ which is compared to 520	3	<p>M1 for working out a valid scale factor between the two triangles or a ratio within one triangle (which can be implied)</p> <p>M1dep for working out another relevant scale factor or ratio, or using <i>their</i> first sf/ratio to find a comparable relevant length.</p> <p>A1dep on M2 for stating “No” eg</p> <p>M1 for (gradient =) $12 \div 100 (= 0.12)$</p> <p>M1 for $66 \div 520 (= 0.126 \text{ to } 0.127 \text{ or } 0.13)$</p> <p>A1 for No OR eg scale factor</p> <p>M1 for $520 \div 100 (= 5.2)$</p> <p>M1 for $5.2 \times 12 (= 62.4)$</p> <p>A1 for No OR eg common height</p> <p>M1 for $100 \times 11 (= 1100)$</p> <p>M1 for $520 \times 2 (= 1040)$</p> <p>A1 for No OR any other correct method eg use of angle</p> <p>M1 for (angle =) $\tan^{-1}(12 \div 100) (= 6.8[4\dots])$</p> <p>M1 for $\tan^{-1}(66 \div 520)(= 7.2[3\dots])$</p> <p>A1 for No</p> <p>Mark to the candidate’s advantage</p> <p>Allow equivalents such as percentages or fractions with a common denominator, also allow any correct method such as use of similar triangles or comparison of scale factors(eg 5.2 and 5.5)</p>

J567/04

Mark Scheme

November 2012

Question		Answer	Marks	Part Marks and Guidance	
11	(a)	6 8	1		
	(b)	correct ruled line from $x = 0$ to $x = 3$	2	B1 for three points correctly plotted FT <i>their</i> table	Tolerance ± 1 mm by eye ie centre of cross within 'circle'
	(c)	2	1	Correct or FT <i>their</i> ruled line Condone (2,10)	Be generous in tolerance
12	(a)	(5.5, 8) nfw	2	B1 for either ordinate correct or for a clear attempt to add together two ordinates and divide by 2 or any other correct method	Accept fractional equivalents for 5.5
	(b)	9.4[3...] or 9 with supportive working	3	M2 for $\sqrt{(8-3)^2 + (12-4)^2}$ or better OR M1 for $8-3$ and $12-4$ or 5 and 8 marked on a diagram as lengths or for a correct Pythagorean statement using <i>their</i> figures eg $5^2 + 8^2$.	$\pm 9.4[3...]$ or $\sqrt{89}$ scores M2
13	(a)	(i)	-18	1	
		(ii)	45	1	
	(b)	1.6 oe	2	M1 for $11 - 3 = 5x$ oe or for $x = a \div 5$ after $5x = a$ if M0 then SC1 for answer -1.6 or correct embedded solution	eg accept $\frac{8}{5}$
	(c)	($n =$) $2T + 5$ final answer	2	M1 for $2T = n - 5$ or an answer of $2T - 5$ or $2(T + 5)$ oe or $\frac{T}{2} + 5$	Allow $2 \times T$ and $T2$ for $2T$ and t for T
