**J560/05: Paper 5 (Higher tier)**

General Certificate of Secondary Education

**Mark Scheme for June 2025**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

© OCR 2025

**MARKING INSTRUCTIONS****PREPARATION FOR MARKING  
RM ASSESSOR**

1. Make sure that you have accessed and completed the relevant training packages for on-screen marking: *RM Assessor Online Training: OCR Essential Guide to Marking*.
2. Make sure that you have read and understood the mark scheme and the question paper for this unit. These are available in RM Assessor
3. Log-in to RM Assessor and mark the **required number** of practice responses (“scripts”) and the **required number** of standardisation responses.

**MARKING**

1. Mark strictly to the mark scheme.
2. Marks awarded must relate directly to the marking criteria.
3. The schedule of dates is very important. It is essential that you meet the RM Assessor 50% and 100% (traditional 40% Batch 1 and 100% Batch 2) deadlines. If you experience problems, you must contact your Team Leader (Supervisor) without delay.
4. If you are in any doubt about applying the mark scheme, consult your Team Leader by telephone, email or via the RM Assessor messaging system.
5. **Crossed-Out Responses**  
Where a candidate has crossed out a response and provided a clear alternative then the crossed-out response is not marked. Where no alternative response has been provided, examiners may give candidates the benefit of the doubt and mark the crossed-out response where legible.

**Rubric Error Responses – Optional Questions**

Where candidates have a choice of question across a whole paper or a whole section and have provided more answers than required, then all responses are marked and the highest mark allowable within the rubric is given. Enter a mark for each question answered into RM Assessor, which will select the highest mark from those awarded. *(The underlying assumption is that the candidate has penalised themselves by attempting more questions than necessary in the time allowed.)*

### Multiple-Choice Question Responses

When a multiple-choice question has only a single, correct response and a candidate provides two responses (even if one of these responses is correct), then no mark should be awarded (as it is not possible to determine which was the first response selected by the candidate).

*When a question requires candidates to select more than one option/multiple options, then local marking arrangements need to ensure consistency of approach.*

### Contradictory Responses

When a candidate provides contradictory responses, then no mark should be awarded, even if one of the answers is correct.

### Short Answer Questions (requiring only a list by way of a response, usually worth only one mark per response)

Where candidates are required to provide a set number of short answer responses then only the set number of responses should be marked. The response space should be marked from left to right on each line and then line by line until the required number of responses have been considered. The remaining responses should not then be marked. Examiners will have to apply judgement as to whether a 'second response' on a line is a development of the 'first response', rather than a separate, discrete response. *(The underlying assumption is that the candidate is attempting to hedge their bets and therefore getting undue benefit rather than engaging with the question and giving the most relevant/correct responses.)*

### Short Answer Questions (requiring a more developed response, worth two or more marks)

If the candidates are required to provide a description of, say, three items or factors and four items or factors are provided, then mark on a similar basis – that is downwards (as it is unlikely in this situation that a candidate will provide more than one response in each section of the response space).

### Longer Answer Questions (requiring a developed response)

Where candidates have provided two (or more) responses to a medium or high tariff question which only required a single (developed) response and not crossed out the first response, then only the first response should be marked. Examiners will need to apply professional judgement as to whether the second (or a subsequent) response is a 'new start' or simply a poorly expressed continuation of the first response.

6. Always check the pages (and additional objects if present) at the end of the response in case any answers have been continued there. If the candidate has continued an answer there, then add the annotation 'SEEN' to confirm that the work has been seen and mark any responses using the annotations in section 11.
7. There is a NR (**No Response**) option. Award NR (No Response):
  - if there is nothing written at all in the answer space
  - OR if there is a comment which does not in any way relate to the question (e.g., 'can't do', 'don't know')

J560/05

## Mark Scheme

June 2025

- OR if there is a mark (e.g., a dash, a question mark) which is not an attempt at the question.

Note: Award 0 marks – for an attempt that earns no credit (including copying out the question).

- The RM Assessor **comments box** is used by your Team Leader to explain the marking of the practice responses. Please refer to these comments when checking your practice responses. **Do not use the comments box for any other reason.**
- Assistant Examiners will send a brief report on the performance of candidates to their Team Leader (Supervisor) via email by the end of the marking period. The report should contain notes on particular strengths displayed as well as common errors or weaknesses. Constructive criticism of the question paper/mark scheme is also appreciated.
- For answers marked by levels of response: Not applicable in F501  
**To determine the level** – start at the highest level and work down until you reach the level that matches the answer  
**To determine the mark within the level**, consider the following

| Descriptor                                            | Award mark                                                                                                |
|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| On the borderline of this level and the one below     | At bottom of level                                                                                        |
| Just enough achievement on balance for this level     | Above bottom and either below middle or at middle of level (depending on number of marks available)       |
| Meets the criteria but with some slight inconsistency | Above middle and either below top of level or at middle of level (depending on number of marks available) |
| Consistently meets the criteria for this level        | At top of level                                                                                           |

11. Annotations available in RM Assessor. These **must** be used whenever appropriate during your marking.

| Annotation                                                                          | Meaning                                                                                       |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
|    | Correct                                                                                       |
|    | Incorrect                                                                                     |
|    | Benefit of doubt                                                                              |
|    | Follow through                                                                                |
|    | Ignore subsequent working (after correct answer obtained), provided method has been completed |
|    | Method mark awarded 0                                                                         |
|    | Method mark awarded 1                                                                         |
|    | Method mark awarded 2                                                                         |
|    | Accuracy mark awarded 1                                                                       |
|    | Independent mark awarded 1                                                                    |
|   | Independent mark awarded 2                                                                    |
|  | Misread                                                                                       |
|  | Special case                                                                                  |
|  | Omission sign                                                                                 |
|  | Blank page                                                                                    |
|  | Seen                                                                                          |

For a response awarded zero (or full) marks a single appropriate annotation (cross, tick, M0 or ^) is sufficient, but not required.

**J560/05****Mark Scheme****June 2025**

For responses that are not awarded either 0 or full marks, you must make it clear how you have arrived at the mark you have awarded, and all responses must have enough annotation for a reviewer to decide if the mark awarded is correct without having to mark it independently.

**It is vital that you annotate standardisation scripts fully to show how the marks have been awarded.**

### Subject-Specific Marking Instructions

1. **M** marks are for using a correct method and are not lost for purely numerical errors.  
**A** marks are for an accurate answer and depend on preceding **M** (method) marks. Therefore **M0 A1** cannot be awarded.  
**B** marks are independent of **M** (method) marks and are for a correct final answer, a partially correct answer, or a correct intermediate stage.  
**SC** marks are for special cases that are worthy of some credit.
2. The following abbreviations are commonly found in GCSE Mathematics mark schemes.
  - **figs 237**, for example, means any answer with only these digits. You should ignore leading or trailing zeros and any decimal point e.g. 237000, 2.37, 2.370, 0.00237 would be acceptable but 23070 or 2374 would not.
  - **isw** means **ignore subsequent working** after correct answer obtained and applies as a default.
  - **nfw** means **not from wrong working**.
  - **oe** means **or equivalent**.
  - **rot** means **rounded or truncated**.
  - **soi** means **seen or implied**.
  - **dep** means that the marks are **dependent** on the marks indicated. You must check that the candidate has met all the criteria specified for the mark to be awarded.
  - **with correct working** means that full marks **must not** be awarded without some working. The required minimum amount of working will be defined in the guidance column and **SC** marks given for unsupported answers.
3. Anything in the mark scheme which is in square brackets [...] is not required for the mark to be earned, but if present it must be correct.
4. Unless the command word requires that working is shown and the working required is stated in the mark scheme, then if the correct answer is clearly given and is not from wrong working **full marks** should be awarded.

Do not award the marks if the answer was obtained from an incorrect method, i.e. incorrect working is seen and the correct answer clearly follows from it.

5. Where follow through (**FT**) is indicated in the mark scheme, marks can be awarded where the candidate's work follows correctly from a previous answer whether or not it was correct. For questions with FT available you must ensure that you refer back to the relevant previous answer. You may find it easier to mark these questions candidate by candidate rather than question by question.

Figures or expressions that are being followed through are sometimes encompassed by single quotation marks after the word *their* for clarity, e.g. FT  $180 \times (\text{their '37' + 16})$ , or FT  $300 - \sqrt{(\text{their '52 + 72'})}$ . Answers to part questions which are being followed through are indicated by e.g. FT  $3 \times \text{their (a)}$ .

6. In questions **with no final answer line**, make no deductions for wrong work after an acceptable answer (i.e., **isw**) unless the mark scheme says otherwise, indicated by the instruction 'mark final answer'.
7. In questions **with a final answer line and incorrect answer given**:
- (i) If the correct answer is seen in the body of working and the answer given on the answer line is a clear transcription error allow full marks unless the mark scheme says 'mark final answer'. Place the annotation ✓ next to the correct answer.
  - (ii) If the correct answer is seen in the body of working but the answer line is blank, allow full marks. Place the annotation ✓ next to the correct answer.
  - (iii) If the correct answer is seen in the body of working but a completely different answer is seen on the answer line, then accuracy marks for the answer are lost. Method marks could still be awarded if there is no other method leading to the incorrect answer. Use the **M0**, **M1**, **M2** annotations as appropriate and place the annotation ✕ next to the wrong answer.
8. In questions **with a final answer line**:
- (i) If one answer is provided on the answer line, mark the method that leads to that answer. A correct step, value or statement that is not part of the method that leads to the given answer should be awarded **M0** and/or **B0**.
  - (ii) If more than one answer is provided on the answer line and there is a single method provided, award method marks only.
  - (iii) If more than one answer is provided on the answer line and there is more than one method provided, award marks for the poorer response unless the candidate has clearly indicated which method is to be marked.
9. In questions with **no final answer line**:
- (i) If a single response is provided, mark as usual.
  - (ii) If more than one response is provided, award marks for the poorer response unless the candidate has clearly indicated which response is to be marked.

When the data of a question is consistently misread in such a way as not to alter the nature or difficulty of the question, please follow the candidate's work and allow follow through for **A** and **B** marks. Deduct 1 mark from any **A** or **B** marks earned and record this by using the **MR** annotation. **M** marks are not deducted for misreads. If a candidate corrects the misread in a later part, do not continue to follow through, but award **A** and **B** marks for the correct answer only.

10. Unless the question asks for an answer to a specific degree of accuracy, always mark at the greatest number of significant figures even if this is rounded or truncated on the answer line. For example, an answer in the mark scheme is 15.75, which is seen in the working. The candidate then rounds or truncates this to 15.8, 15 or 16 on the answer line. Allow full marks for the 15.75.
11. Ranges of answers given in the mark scheme are always inclusive.
12. For methods not described in the mark scheme, such as visual representations like bar models, ratio tables, give equivalent marks for equivalent work. If in doubt, consult your Team Leader.
13. If in any case the mark scheme operates with considerable unfairness consult your Team Leader.

## Appendix 2 Question 12

For the M marks, statements may be embedded within longer text but they must be clear distinct statements involving equalities of pairs of named sides or pairs of named angles with (if given) the reason alongside the statement. Do not accept annotation on the diagram as implying method. This question is also assessing clear communication of the mathematics.

## Example A

Prove that triangle ABD is congruent to triangle CBD.

• All sides equal  
• Line BD is perpendicular to AC, meaning it is the mid point

- Splitting an equilateral triangle creates 2 right angle triangles and because they are equilateral ~~all sides~~ it should be the same on both sides. RHS, right angle they both have, hypotenuse is the same and the side is the same.

Yes, it is congruent as said by RHS. This ~~but~~ means they are congruent as they all have a right angle, hypotenuse is the same and side is the same as it was equilateral. [4]

Within the text there is no specific named equality of pairs of sides or pairs of angles stated. It is done in more general terms and this is not acceptable so M0

## Example B

$\triangle ABD$

Equilateral = all angles are the same

$$\angle ABC = \angle BAC = \angle BCA$$

$$\text{Each angle} = \frac{180}{3} = 60$$

$$\begin{aligned} \angle ABD &= 60/2 = 30^\circ \\ \text{so } \angle BAD &= 180 - (30 + 90) \\ &= 60^\circ \end{aligned}$$

$\triangle CBD$

$$\begin{aligned} \angle CBD &= 60/2 = 30^\circ \\ \text{so } \angle BCD &= 180 - (30 + 90) \\ &= 60^\circ \end{aligned}$$

- Both are right angled triangles that share line BD
- Both share the same angles of  $90^\circ, 30^\circ, 60^\circ$
- They form an equilateral triangle which has angles of the same angles ( $60, 60, 60$ ) so both triangles must be equal. [4]

There are no clear distinct equality statements of pairs of sides or pairs of angles with reasons.  
The statement BD is shared appears in the text and earns M1

J560/05

Mark Scheme

June 2025

## Example C

$\angle DBC$  and  $\angle DBA$  both equal  $30^\circ$  as angle  $\angle BAD$  and  $\angle DCB$  both are  $60^\circ$  as triangle  $ABC$  is equilateral so with the perpendicular line creating  $90^\circ$  angles in order to get the full  $180^\circ$  they must be  $30^\circ$  so therefore  $ABD$  is congruent to  $CBD$  [4]

Within the text there are two clear distinct statement of equality of angles  $DBC = DBA = 30$  and  $BAD = DCB = 60$  with reasons. There is no statement about equalities of pairs of sides

**Award M2**

## Example D

$$BDA = BDC$$

so  $BDA$  is  $90^\circ$ .

$BD$  is the same in both triangles.

SAS

$AC$  runs along both triangles.

so  $AD = AC$

so triangles are SAS.

$BDA = BDC$  stated and 90 is given for  $BDA$  next to the statement BOD M1  
 $BD$  is shared earns M1

**Appendix 3 Question 22**

Page 7 point 12 in general guidance of mark scheme - allow other equivalent correct methods e.g.

Using right-angled trig and perpendicular from D to AB (to K) to find DK and  $BK = 7 - AK$ .  
Then Pythagoras to find BD

**M2** for  $BD = \sqrt{(7 - 5 \times 0.8)^2 + (5 \times 0.6)^2}$  oe

or **M1** for  $BD^2 = (7 - 5 \times 0.8)^2 + (5 \times 0.6)^2$  oe
