

1

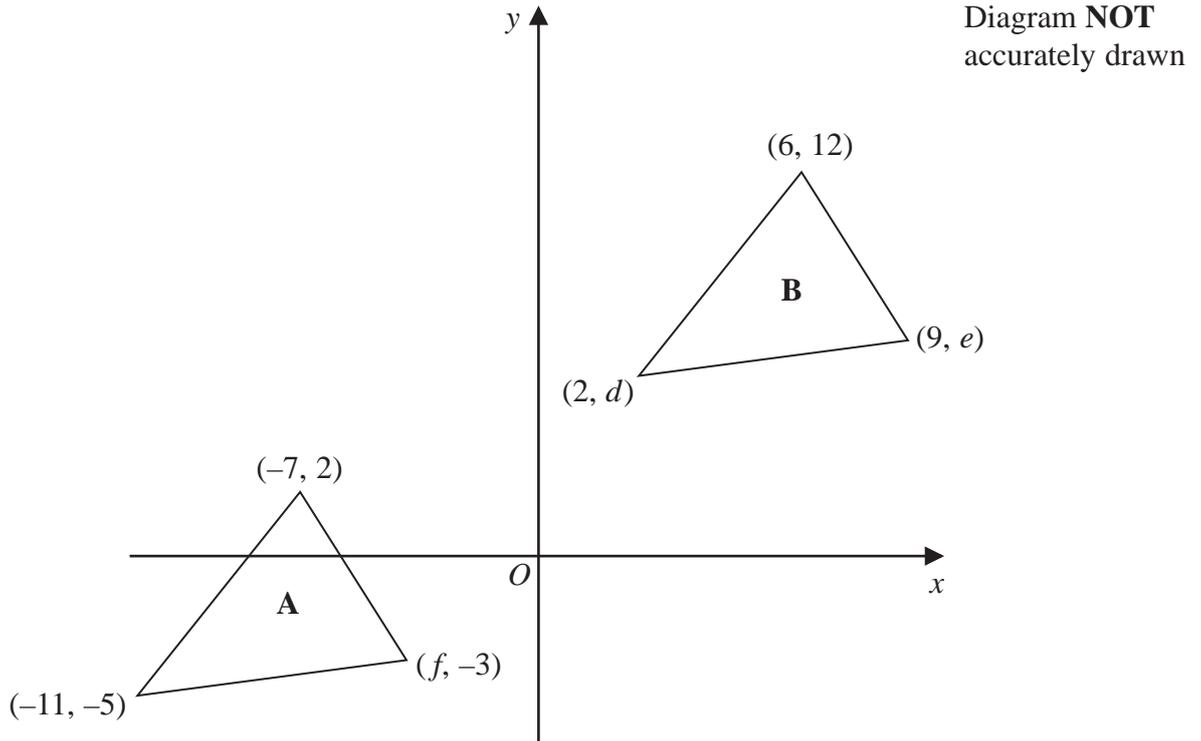

- (b) On the grid above, translate triangle **A** by the vector  $\begin{pmatrix} -4 \\ 3 \end{pmatrix}$  - four positions to the left  
 - three positions upward

Label your triangle **C**

2 The diagram shows a sketch of triangle **A** and triangle **B** on a coordinate grid.

(a) Given that triangle **A** has been translated to give triangle **B**, work out the value of  $d$ , the value of  $e$  and the value of  $f$

$$\begin{aligned} \text{translation} &= \begin{pmatrix} 6 - (-7) \\ 12 - 2 \end{pmatrix} \\ &= \begin{pmatrix} 13 \\ 10 \end{pmatrix} \quad (1) \end{aligned}$$

$$\begin{aligned} \text{point } (-11, -5) &: \begin{pmatrix} -11 + 13 \\ -5 + 10 \end{pmatrix} \\ &= \begin{pmatrix} 2 \\ 5 \end{pmatrix} \quad \therefore d = 5 \quad (1) \end{aligned}$$

$$\text{point } (f, -3) : \begin{pmatrix} f + 13 \\ -3 + 10 \end{pmatrix} = \begin{pmatrix} 9 \\ e \end{pmatrix}$$

$$f = 9 - 13 = -4$$

$$e = -3 + 10 = 7$$

$$\begin{aligned} d &= \dots 5 \quad (1) \\ e &= \dots 7 \\ f &= \dots -4 \\ &\quad (3) \end{aligned}$$
