

1 Alexa has five cards.

Each card has a number on it.

The table gives information about the numbers on the five cards.

Total	Median	Mode	Range
45	8	5	10

Using the information in the table, complete each card by writing its number on it.

Median = 8 (means two number smaller and two number larger than 8)

Mode = 5 (means appear the most . since 8 is median , there are two 5s)

Range = 10 . (since 5 is the smallest number , largest number is 15)

total = 45 . The remaining card is $45 - 5 - 5 - 8 - 15 = 12$

(Total for Question 1 is 3 marks)

2 Alison buys 2 boxes of strawberries, box A and box B.

Box A contains 15 strawberries.

The strawberries in box A have a mean weight of 24 grams.

$$\text{mean} = \frac{\text{total weight}}{\text{no. of strawberry}}$$

Box B contains 25 strawberries.

The strawberries in box B have a mean weight of 18 grams.

Alison puts all 40 strawberries into a bowl.

Work out the mean weight of the 40 strawberries.

Calculating total weight of box A :

$$24 \times 15 = 360 \text{ g}$$

Calculating total weight of box B :

$$18 \times 25 = 450 \text{ g} \quad \textcircled{1}$$

Calculating total weight of all strawberries :

$$360 + 450 = 810 \text{ g} \quad \textcircled{1}$$

Mean weight of 40 strawberries :

$$\frac{810 \text{ g}}{40} = 20.25 \text{ g} \quad \textcircled{1}$$

20.25

..... grams

$$-6 + 8 = 2 \quad (1)$$

..... 2 °C
(2)

(Total for Question 12 is 8 marks)

- 13 A mathematics teacher at a school asked a group of students how far, in kilometres, each student had travelled to get to school that day.

The table gives information about their answers.

Distance travelled (d km)	Number of students
$0 < d \leq 2$	x
$2 < d \leq 4$	11
$4 < d \leq 6$	8
$6 < d \leq 8$	6
$8 < d \leq 10$	5

The teacher calculated that an estimate for the mean distance travelled by the whole group of students was 4.25 km.

Work out the value of x .
Show your working clearly.

$$\text{Estimated mean} = \frac{(x \times 1) + (11 \times 3) + (8 \times 5) + (6 \times 7) + (5 \times 9)}{x + 11 + 8 + 6 + 5} = 4.25$$

$$= \frac{x + 33 + 40 + 42 + 45}{x + 30} = 4.25$$

$$= 160 + x = 4.25(30 + x)$$

$$160 + x = 127.5 + 4.25x$$

$$160 - 127.5 = 4.25x - x$$

$$32.5 = 3.25x$$

$$x = \frac{32.5}{3.25}$$

$$= 10$$

$$x = \dots\dots\dots 10$$

$36 < m \leq 48$	15
$48 < m \leq 60$	6

Work out an estimate for the mean length of time the students spent dancing.

$$\text{Mean} = \frac{(6 \times 11) + (18 \times 25) + (30 \times 23) + (42 \times 15) + (54 \times 6)}{80} \quad (1)$$

$$= \frac{66 + 450 + 690 + 630 + 324}{80} \quad (1)$$

$$= \frac{2160}{80} \quad (1)$$

$$= 27 \quad (1)$$

- 32 The frequency table shows information about the number of cookies made by each of the 21 people in a cookery class.

Number of cookies made	Frequency
10	1
11	7
12	2
13	5
14	4
15	2

1

8

10

15

19

21

- (a) Write down the mode of the number of cookies made.

11 (1)

- (b) Find the median number of cookies made.

$$\frac{21}{2} = 10.5$$

≈ 11th cookies (1)

13 (1)

- (c) Find the total number of cookies made by the 21 people in the cookery class.

$$10 \times 1 + 7 \times 11 + 2 \times 12 + 5 \times 13 + 4 \times 14 + 2 \times 15$$

$$= 10 + 77 + 24 + 65 + 56 + 30 \quad (1)$$

$$= 262 \quad (1)$$

33 The table shows how many cousins each of 30 students in Class A has.

Number of cousins	Frequency
0	3
1	7
2	6
3	11
4	1
5	2

(a) Work out the range of the number of cousins.

$$5 - 0 = 5$$

5 (1)

(1)

(b) Write down the mode of the number of cousins.

3 (1)

(1)

(c) Work out the mean of the number of cousins.

$$\begin{aligned} \text{mean} &= \frac{(0 \times 3) + (1 \times 7) + (2 \times 6) + (3 \times 11) + (4 \times 1) + (5 \times 2)}{30} \\ &= \frac{7 + 12 + 33 + 4 + 10}{30} \\ &= \frac{66}{30} = 2.2 \end{aligned}$$

34 Gemara works as a taxi driver.

Last week, he recorded the following information about the distances he drove.

For the 5 days from Monday to Friday, the mean number of kilometres he drove was 104

For the 7 days from Monday to Sunday, the mean number of kilometres he drove was 127

On Saturday, Gemara drove 132 kilometres.

Work out the number of kilometres he drove on Sunday.

Total distance :

$$\text{Monday to Friday} = 5 \times 104 = 520 \text{ km} \quad (1)$$

$$\text{Monday to Sunday} = 7 \times 127 = 889 \text{ km}$$

$$\text{saturday and Sunday} = 889 - 520 = 369 \text{ km} \quad (1)$$

$$\text{Sunday} = 369 - 132 = 237 \text{ km} \quad (1)$$

237

35 Pam plays netball for her school team.

Here are the numbers of goals she scored in the last 8 games.
The numbers of goals are written in order of size.

1 1 2 2 3 6 x 14

(a) Find the range of the number of goals Pam scored.

$$14 - 1 = 13 \quad (1)$$

13

(1)

(b) Find the median number of goals Pam scored.

$$\text{Median} = \frac{2+3}{2} = 2.5 \quad (1)$$

2.5

(1)

The mean number of goals Pam scored in the 8 games is 5

(c) Work out the value of x

$$\text{Total goals scored} = 8 \times 5 = 40 \quad (1)$$

$$x = 40 - 1 - 1 - 2 - 2 - 3 - 6 - 14 \quad (1)$$

$$= 40 - 29$$

$$= 11 \quad (1)$$

$$x = 11 \quad (3)$$

36 Team A and Team B take part in a quiz league.

After 11 rounds, Team A has a mean score per round of 17

After 9 rounds, Team B has a mean score per round of 18

Both teams take part in a further round.

After this round, both teams have a mean score per round of 18.5

In the further round, Team A scored more points than Team B.

How many more?

$$\text{Total score (Team A)} : 17 \times 11 = 187$$

$$\text{Total score (Team B)} : 18 \times 9 = 162$$

$$\text{Team A} : \frac{187 + x}{12} = 18.5$$

$$187 + x = 18.5 \times 12$$

$$x = 222 - 187 = 35$$

$$\text{Team B} : \frac{162 + y}{10} = 18.5$$

$$162 + y = 185$$

$$y = 185 - 162 = 23$$

$$35 - 23 = 12$$
