

Q1. A bag contains 4 beads.

2 beads are blue.

1 bead is red.

1 bead is yellow.

Connor takes at random a bead from the bag.

- (a) On the probability scale, mark with a cross (X) the probability that he takes a blue bead.

(1)

- (b) On the probability scale, mark with a cross (X) the probability that he takes a yellow bead.

(1)

- (c) On the probability scale, mark with a cross (X) the probability that he takes a white bead.

(1)

(Total 3 marks)

M1.

	Answer	Mark	Additional Guidance
(a)	X at $\frac{1}{2}$	1	$\frac{1}{2}$ B1 for X marked at $\frac{1}{2}$ cao (allow the X above or below the line)

(b)

X at $\frac{1}{4}$

1

(c)	X at 0	1	B1 for X marked at 0 cao (allow the X above or below the line)
			Total for Question: 3 marks

##

Surprisingly, parts (a) and (b) of this question were poorly answered. In (a), the cross was often placed between $\frac{1}{2}$ and 1. A lack of accuracy in positioning the cross in part (b) accounted for many unsuccessful attempts. Part (c) usually gained full credit.
