Q1.

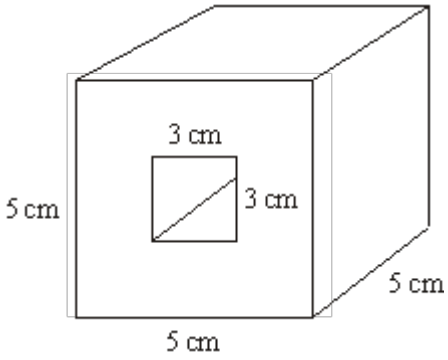

Diagram **NOT** accurately drawn

The solid shape, shown in the diagram, is made by cutting a hole all the way through a wooden cube.
The cube has edges of length 5 cm.
The hole has a square cross section of side 3 cm.

(a) Work out the volume of wood in the solid shape.

..... cm^3

(2)

The mass of the solid shape is 64 grams.

(b) Work out the density of the wood.

..... grams per cm^3

(2)
(Total 4 marks)

Q2. The density of juice is 4 grams per cm^3.
The density of water is 1 gram per cm^3.

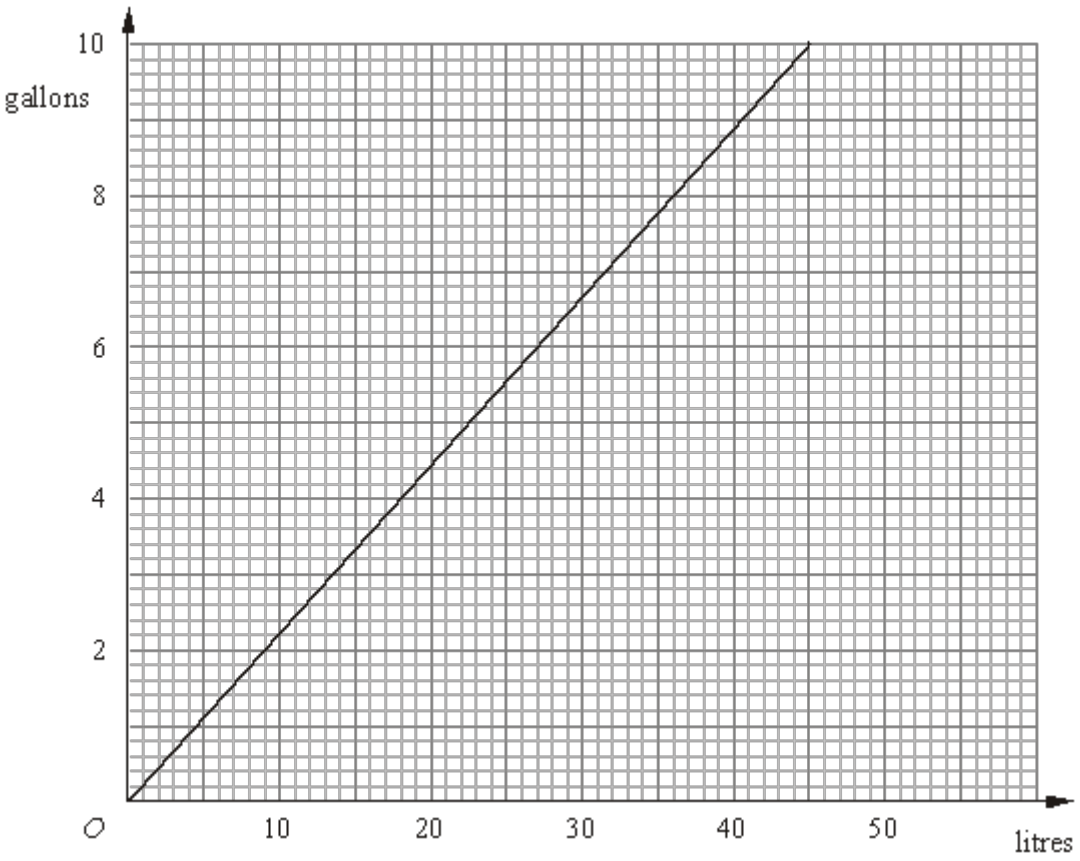
315 cm^3 of drink is made by mixing 15 cm^3 of juice with 300 cm^3 of water.

Work out the density of the drink.

..... grams per cm^3

(Total 3 marks)

Q3. The graph can be used to convert between gallons and litres.



The diagram shows a central heating oil tank.

The oil tank is in the shape of a cylinder of length 180 cm and radius 60 cm.

The oil tank contains 200 gallons of oil.

(a) Is the oil tank more or less than $\frac{1}{2}$ full?

.....

(5)

The oil has a density of 0.85 g/cm^3.

(b) Work out, in kg, the mass of the oil in the tank.

..... kg

(3)
(Total 8 marks)

M1.

	Working	Answer	Mark	Additional Guidance
(a)	$5^3 - 5 \times 3 \times 3$ $125 - 45$ $(5 \times 5 - 3 \times 3) \times 5$ $(25 - 9) \times 5$ 16×5	80	2	**M1** for attempt to find volume of cube (e.g. 5 × 5 × n where $n \neq 6$) and subtract volume of the hole (e.g. 3 × 3 × n where $n \neq 6$) (needs to be dimensionally correct) **A1** cao **Alternative method** **M1** for attempt to find area of the cross section and multiply by the depth of the prism (depth ≠ 6) **A1** cao
(b)	64 ÷ 80	0.8	2	**M1** ft 64 ÷ "80" **A1** ft (to 2 sf or better)

FE	(a)	1 gallon = 4.54 litres, 200 gallons = 908 litres = 908000 cm^3 Vol of tank $60^2 \times x \pi \times 180$ = 2035752.04..cm^3 908000 < 1017876.02 **OR** Vol of tank $60^2 \times \pi \times 180$ = 2035752.04..cm^3 Half vol of tank = 1017876.02 cm^3 = 1017.876…litres 1017.876 ÷ 4.54 = 224 gallons 224 > 200	No	5	Response may convert into gallons, litres, or cm^3 Calculations may be performed in different orders **M1** Using formulae to find volume of tank **B1** Converts between litres and cubic centimetres **M1** reads off graph for 1l, 2l , 4l, 5l or 10 litres within tolerance (4.4 – 4.6) **A1** Answer in cm^3, litres or gallons **C1** Decision and reason **QWC: Decision should be stated, with appropriate supporting statement**
	(b)	"908000" cm^3 × 0.85 g/cm^3 = 771800 g	771.8	3	**M1** "908000" × 0.85 **M1**(dep) 771800 ÷ 1000 **A1** 770 – 772
					Total for Question: 8 marks

E1. Fully correct answers to this question were only given by 23% of candidates. In part (a) it was common to see the volume of the 5cm cube being given correctly but then incorrect calculations for the hole were frequently seen. Some candidates thought the hole was a 3 cm cube and not a square prism with length 5cm. Where candidates tried to subtract two sensible volumes they were awarded a mark, however it was quite common to see candidates try to subtract 9cm² away from 125cm³ and therefore achieve no marks.

In part (b) full marks were awarded for dividing the mass of 64 grams by the volume calculated in part (a) and 39% of candidates scored 2 marks usually for doing this. A large number of candidates divided volume by mass or multiplied mass and volume and so gained no credit. It was disappointing to see 39% of candidates gaining no marks at all in this question.

E2. Over 60% of candidates were awarded at least one mark for their responses to this question. These candidates were able to find the mass of the juice or of the combined drink to gain one mark.

However, relatively few candidates could make any further progress.

Only about one in eight were able to complete the question successfully. Of those candidates who scored no marks on this question, a significant minority worked out 15 ÷ 4 and 300 ÷ 1 or 315 ÷ 5.
