12	a		5 [×] 70    or    5 [×] 0.7  and  3.5[0]	M1 A1	Not from $73 \times 4.9$ and rounded to 360 or truncated 350 Accept e.g. $70+70+70+70+70$ for M1 Condone units included in product Condone answer 350p with £ crossed through or £3.50p	

**Examiner's Comments**

Many candidates struggled with this question.

Common errors were to multiply the given numbers and then round the answer, to round 4.9 to 5 and then multiply it by 73, or to work out  $5 \times 70$  and give the answer £350 (this scored the method mark only).

						<p>For additional information refer to '2024 November, J560/03, Mark Scheme Appendix: item 1' within downloadable extra resource materials.</p> <p>Allow complete and correct example(s)</p>
	b		Recognition that the figures are not all to the same number of sig fig e.g. They're not all the same accuracy oe	1	<p><b><u>Examiner's Comments</u></b></p> <p>A few correct answers were seen to this question. Candidates generally did not pick out the key words 'same number of significant figures' from the question.</p> <p>Common incorrect responses were 'He rounded wrong', 'The 5.099 should have been rounded to 6', 'He made it a top-heavy fraction' and 'He didn't use significant figures correctly'.</p> <p> <b>Misconception</b></p> <p>Many appeared to be trying to find an error in the rounding rather than in the method and may not have read the question carefully.</p>

20			2.6 <	2	<p>This was rarely answered correctly. Many didn't recognise the need for both one number and one symbol. Candidates often seemed unsure about truncating and instead responded as if the number had been rounded.</p> <p>2.6 was rarely given on the first answer line, with 2.5, 2.55 and 2.65 seen on a few occasions.</p> <p>On the second answer line, a number was often given, or sometimes both a number and a symbol. Incorrect symbols often seen here were =, &gt; and ≤. Placing 2.6 above the <i>n</i> was also quite common.</p> <p>Many did not respond at all.</p>	
			<b>Total</b>	<b>2</b>		
21			68.7	3	<p><b>B2 for answer</b> 68.6 or 68.65 to 68.67[0...] or <math>68.\dot{6}</math> or <b>M1</b> for <math>103 \div 3</math> soi 34.3[3...] or <math>103 \times 2</math> soi 206</p>	$\frac{2}{3} \times 103$ implies <b>M1</b> but not $\frac{2}{3}$ of 103 Condone 0.66 to 0.67 or .06 for $\frac{2}{3}$

						<p>If <math>\frac{2}{3}</math> seen = a decimal <math>&lt; 1</math> allow the decimal <math>\times 103</math> to imply <b>M1</b></p>
					<p><b>Examiner's Comments</b></p> <p>Most candidates scored at least the method mark here for having '<math>103 \times 2</math>', '<math>103 \div 3</math>' or '<math>\frac{2}{3} \times 103</math>'. Some candidates however had incorrect calculations such as '<math>103 \times 3</math>' or '<math>103 \div 2</math>'.</p> <p>Many responses chose to work in decimals from the start and made attempts to convert <math>\frac{2}{3}</math> to a decimal. This was often truncated or rounded and accuracy was lost.</p> <p>Candidates should be aware that statements such as '<math>\frac{2}{3}</math> of 103' will not score a method mark as no operation is shown.</p>	
					<p> <b>Assessment for learning</b></p> <p>Candidates should practice using fractions on the calculator.</p>	
		<b>Total</b>	<b>3</b>			
22		96	4	<p><b>B3</b> for 19.04 or answer 0.96 or  <b>B2</b> for 16</p> <p>OR</p> <p><b>M2</b> for <math>20 - 1.19 \times</math> their <i>k</i></p> <p>OR</p>	<p>Condone £0.96 for 4 marks</p> <p><i>Their k</i> must be:</p> <ul style="list-style-type: none"> <li>• from figs 2[0] ÷</li> </ul>	

						<p>figs 119 and</p> <ul style="list-style-type: none"><li>• <math>15 \leq</math> their <math>k</math> integer <math>\leq 17</math></li></ul> <p><b>M1</b> for figs 2[0] <math>\div</math> figs 119 implied by figs 168...</p> <p><math>20 \div 1.19</math> may be at least 16 implied additions or subtractions of 1.19</p>	<p><b>Examiner's Comments</b></p> <p>A significant number of candidates continue to struggle with dividing. Many carried out repeated addition of 1.19, sometimes making errors along the way. Some may have carried out the division on their calculator and were unsure how to interpret the answer 16.8067... so attempted addition instead, but candidates ought to be familiar with interpreting values.</p> <p>Some candidates calculated '<math>20 \div 1.19 = 16.81\dots</math>', but then treated this as the cost of the keyrings rather than the number of keyrings. This lead to calculations such as '<math>20 - 16.81</math>', or they added 1.19 to their 16.81.</p> <p>Some carried out the division and then responded '16'. Candidates should ensure they have carefully read the question.</p> <p>Exemplar 1</p>
--	--	--	--	--	--	---	---

					$  \begin{array}{r}  £1.19 \\  + £2.38 \\  \hline  £3.57  \end{array}  $ $  \begin{array}{r}  £4.16 \\  + £3.95 \\  \hline  £8.11  \end{array}  $ $  \begin{array}{r}  £7.14 \\  + £8.33 \\  \hline  £15.47  \end{array}  $ $  \begin{array}{r}  £9.52 \\  + £1.60 \\  \hline  £11.12  \end{array}  $ $  \begin{array}{r}  96 \\  + 7 \\  \hline  103  \end{array}  $ $  \begin{array}{r}  17.85 \\  + 17.85 \\  \hline  35.70  \end{array}  $ $  \begin{array}{r}  16 \\  + 19.04 \\  \hline  35.04  \end{array}  $
					<p>This exemplar demonstrates the inefficient method of repeated addition. The candidate does reach the correct answer in the end, but even though they skip ahead to the cost of 15 and 16 keyrings rather than carry on the individual counting, they will still have cost themselves quite a bit of time in this method.</p> <p> <b>Assessment for learning</b></p> <p>Candidates need to practise efficient calculator methods and become familiar with using them, as well as interpreting their results.</p>
23	a	<b>Total</b>	4	2	<p><b>M1 implied by 45</b>  <b>Repeated addition, we must see their method, allow one arithmetic error.</b>  e.g. 7.5, 15 then <math>15 \times 3 [=45]</math></p> <p><b>Examiner's Comments</b></p> <p>The majority of candidates responded and achieved at least M1. Most attempted <math>6 \times 7.5</math>, with many correctly reaching 45 and then subtracting this from 50.</p>

					Where errors were made, it was often a mistake in their long multiplication or through repeated addition (most that attempted repeated addition added up 7.5 six times, but some tried 6 seven and a half times). Some candidates didn't subtract their calculation result from 50, for example giving 45 as their answer.
				<p><b>B2</b> for 12.5</p> <p>or</p> <p><b>M2</b> for <i>their (a)</i>  <math>\times 1000 \div 400</math> or  <i>their (a)</i> <math>\div [0].4</math></p> <p>or</p> <p><b>M1</b> for <i>their (a)</i>  <math>\times 1000</math> or <math>400 \div 1000</math>  or <i>their (a)</i> <math>\div</math> figs 4</p>	<p><i>their (a)</i> must be  <math>&gt; 0.4</math></p> <p><b>M2</b> implied by  repeated  addition or  subtraction to  one less than  <i>their (a)</i> or <i>their (a)</i> <math>\times 1000</math> see  appendix  If <i>their (a)</i> <math>&lt; 1.2</math>  then all  multiples must  be seen</p>
b	12	3		<p><b>Examiner's Comments</b></p> <p>Those who achieved the correct answer for part (a) were regularly able to score at least M2 here in part (b). The context of this question seemed to help candidates access the question. Many different approaches were used by candidates, including short division, repeated subtraction and repeated addition.</p> <p>There was good evidence of candidates making their division easier for themselves. For example, after <math>\frac{5000}{400}</math> was seen, a number of candidates attempted <math>\frac{50}{4}</math>.</p> <p>Many candidates picked up the M2 for a correct method without a correct answer, but the B2 was rarely given as almost all that reached '12.5' then went on to the correct answer and full marks.</p>	

					<p>Those who struggled were often able to score M1 for a correct conversion, generally for converting their (a) into millilitres although some converted 400ml into litres. As in Question 11, some candidates however struggled to convert correctly between relevant units; the most common error here was using 1L = 100ml.</p> <p> <b>Assessment for learning</b></p> <p>While repeated addition and/or subtraction is rarely the most efficient approach, to support its marking we have drawn up specific marking guidance that can be used where needed. It appears in the J560/02 mark scheme appendix this year and allows for a consistent approach to be made by both markers as well as those marking student mocks. It may also be beneficial to familiarise candidates with the required working they must show in order to be given method marks where needed.</p>
c	200		2	<p><b>B2FT</b> for <i>their (a) × 1000 – their (b) × 400</i> evaluated correctly or <b>M1</b> <i>their (a) × 1000 – their (b) × 400</i></p>	<p><i>their (a)</i> must be <math>&gt; 0.4</math></p> <p><i>their (a) × 1000</i> <math>\geq</math> <i>their (b) × 400</i></p> <p><i>their (b)</i> must be an integer.</p> <p>Implied by repeated subtraction or addition. Working may be seen in part (b) for <b>M1</b></p> <p><b>Examiner's Comments</b></p> <p>Candidates successful in parts (a) and (b) almost always achieved the correct answer here, often by using their</p>

					working out from part (b).  <p>'Follow Through' from both (a) and (b) was credited and some candidates with errors in part (a) and/or part (b) correctly complete the calculation <i>'their (a) × 1000 – their (b) × 400'</i> to pick up the 2 marks.</p> <p>A significant number of candidates did not respond, however these were almost always those who didn't respond to part (b) or didn't complete it fully.</p> <p><b>Exemplar 2</b></p> <p>(a) Ivan fills six large pots each holding 7.5 litres.    Work out how much compost is left in the sack.  <math display="block">  \begin{array}{r}  60 \\  - 45.5 \\  \hline  14.5  \end{array}  \quad  \begin{array}{r}  7.5 \\  \times 6 \\  \hline  45.5  \end{array}  \quad  \begin{array}{r}  45.5 \\  \hline  45.5  \end{array}  </math> </p> <p>(b) <u>6.5</u> litres [2]</p> <p>(c) Ivan uses the remaining compost to fill small pots each holding 400ml.    Work out the maximum number of small pots Ivan can fill with the remaining compost.  <math display="block">  \begin{array}{r}  1450 \\  \times 400 \\  \hline  5800  \end{array}  </math> </p> <p>(d) <u>11</u> [2]</p> <p>(e) Work out how much compost will then be left in the sack.  <math display="block">  \begin{array}{r}  400 \\  \times 11 \\  \hline  4400  \end{array}  \quad  \begin{array}{r}  4000 \text{ used} \\  + 4400 \\  \hline  8400  \end{array}  \quad  \begin{array}{r}  4.5 - 4.4 = 0.1 \\  0.1 \times 100 \\  \hline  10  \end{array}  </math> </p> <p>(f) <u>10</u> ml [2]</p> <p>This candidate's response to (a) is incorrect, but they write <math>7.5 \times 6</math> and it leads to the value on the answer line, so M1 is given.</p> <p>In (b), M2 is given for <i>'their (a) × 1000 ÷ 400'</i>. They simplify this calculation to the equivalent <math>45 \div 4</math>.</p> <p>In part (c) we look for Follow Through ('FT') from their parts (a) and (b). They correctly carry out <i>'their (a) × 1000 – their (b) × 400'</i> (their subtraction calculation is in litres, but it is correct) and so B2FT is given.</p>
			<b>Total</b>	<b>7</b>	
24	a		Three of 20[.00], 30[.00], 40 and 4 seen	B1 M1	

			<p>40 × 20 4 × 30 920 or 800 and 120</p>	<p>M1 A2</p> <p>for <i>their</i> 40 × <i>their</i> 20 for <i>their</i> 4 × <i>their</i> 30</p> <p><b>A2</b> dep on <b>B1M1M1</b> or <b>A1</b> dep on <b>B1M1</b> for 800 or 120</p>	<p><b>B1</b> seen as rounding</p> <p><i>their</i> 40 can be <math>40\frac{1}{3}</math>, 40.3, 40.33[3...] or 41 <i>their</i> 20 can be 20.15 or 21 <i>their</i> 4 can be <math>4\frac{1}{4}</math>, 4.25 or 5 <i>their</i> 30 can be 30.23 or 3</p> <p><b>Examiner's Comments</b></p> <p>Many did not follow the instruction to round given in this question and subsequently struggled. Those who did successfully round the values generally arrived at a correct response.</p> <p>Long multiplication was often used for <math>40 \times 20</math>, but repeated addition was sometimes used for <math>4 \times 30</math>.</p> <p>Responses that did not round (or did not round correctly) were frequently given M1M1 for showing working to multiply the wage by the hours worked for both the weekdays and the weekend. Some that hadn't rounded attempted to partition the values to simplify their working. For example, dividing £20.15 by 3 to get the pay per <math>\frac{1}{3}</math> of an hour, then adding it to <i>their</i> <math>£20.15 \times 40</math>, or similarly for the Saturday pay.</p> <p>A few omitted their working altogether and just wrote 800 and 120. The question asks candidates to '...show that Amaya may be correct' and just writing values is insufficient to show this.</p>
--	--	--	--	---	--

					<p>There were a number of common issues seen in candidates working.</p> <ol style="list-style-type: none"> <li>1. Candidate working out was often poorly presented and in some cases this resulted in values being used incorrectly or omitted.</li> <li>2. Converting units of time continues to be a challenge for many. Many correctly converted <math>\frac{1}{3}</math> hour to 20 minutes or <math>\frac{1}{4}</math> hour to 15 minutes, but then incorrectly used 40.20 and 4.15 in calculations.</li> <li>3. Some tried to divided <math>\frac{40}{3}</math> by 5, in an attempt to find the hours worked each day from Monday to Friday. This was often rounded to 8 hours worked per day, then multiplied by the wage (either £20 or £20.15) and this then finally multiplied by 5 to give pay across the weekdays.</li> </ol> <p>Exemplar 3</p> <p>40h 20min week <math>\rightarrow</math> £80.6 pay  <math>4 \text{ h } 15 \text{ min Sat}</math> <math>926</math></p> <p><math>20 \times 40 = 800</math>  <math>800 + 0.15 = 800.15</math></p> <p><math>30 \times 4 = 120</math></p> <p>At a glance it might look like this candidate has rounded all the values, but in fact they have not rounded the £20.15 wage. Instead, they have partitioned it and multiply both partitions by 40.</p> <p>Three rounded figures is sufficient for the B1 however, so it is given.</p> <p>M1 is given for '40 <math>\times</math> their 20', as even though they have not rounded 20.15, they carry out a valid multiplication (20.15 is noted in the mark scheme's guidance column as acceptable here).</p>
--	--	--	--	--	---

					<p>The second M1 is also given for '30 × 4'.</p> <p>A1 is then given for 120. The A2 is not given as even though '800' is seen in the response, it is part of their partitioned calculation and the final result for the weekday earnings is £806.</p> <p>This candidate is given 4 marks in total.</p>
b	The calculation is an underestimate	1			<p>All values were rounded down oe</p> <p>Mark best response as long as not contradictory or incorrect</p> <p>We want the candidate to say WHY they are certain of the figure being at least £900.</p> <p>If <u>TOTAL</u> is used then this MUST be £920. IF <u>rounded figures are used</u> then <b>all</b> four must be rounded down correctly (20,30,40,4)</p> <p><b>Response Mark</b></p> <p><b>1</b> It is an Underestimate <b>1</b>  <b>2</b> All Values were rounded down <b>1</b>  <b>3</b> This is correct because at minimum she will make 920 ('<i>at minimum implies rounding and is correct</i>) <b>1</b>  <b>4</b> The values are rounded down meaning she earnt more than this <b>1</b>  <b>5</b> <math>(40 \times 20) + (4 \times 30)</math> already equal over £900 <b>1</b>  <b>6</b> The underestimation is over £900 <b>1</b>  <b>7</b> If you round the earnings you get over £900 (<i>this is true for rounding both up and down</i>) <b>1BOD</b>  <b>8</b> Because in my working not adding the minutes, it's still over £900 as it's £928.80 (<i>incorrect</i>) <b>0</b>  <b>9</b> Because I estimated it meaning she'd probably got more (<i>probably does not mean certain</i>) <b>0</b></p>

					<p><b>10</b> As it has gone over £900 (<i>not describing rounding or underestimate</i>) <b>0</b></p> <p><b>11</b> This is correct because she will make 920 (<i>the candidate is not telling us WHY they are certain</i>) <b>0</b></p> <p><b>12</b> Because £20.15x40=£806 and £30.23 x4=120.92 + them = 926.92 not including the minimum (<i>All rounded values not used</i>) <b>0</b></p> <p><b>13</b> If you added everything without a fraction it adds up to almost £900 (<i>incorrect</i>) <b>0</b></p> <p><b>14</b> Because it works out that all of her work will add to over 900 (<i>no reference to underestimate</i>) <b>0</b></p> <p><b>15</b> Because it's over 900 (<i>not enough, need to say WHY it is certainly over £900</i>) <b>0</b></p> <p><b>16</b> The estimation is over £900 (<i>not enough, need to say WHY estimation is certainly over £900</i>) <b>0</b></p> <p><b>17</b> Because I rounded down (<i>not enough- needs to be e.g. rounded <u>all</u> numbers down</i>) <b>0</b></p>

Examiner's Comments

					Many candidates showed their work in a clear and logical way and were given 5 marks. Successful candidates usually started by finding 30% of 600 and then multiplied by 7 to find the amount of cereal consumed in 7 days as 1260 g. Some candidates then used repeated subtraction to reach their final answer, rather than division.
			<b>Total</b>	<b>5</b>	
26			Accept any correctly matched pair where car > garage matched pair of values or non-overlapping ranges and the values quoted are $4.5 \leq \text{garage} < 4.55$ $4.5 < \text{car} < 4.55$	3	<p>Ranges must not overlap for 3 marks</p> <p>Values must be clearly associated with garage (or 5) or car (or 4.5) as appropriate.</p> <p>For <b>B1</b> if choice of values given all must be in range, unless acceptable value(s) indicated</p>
					<b>Examiner's Comments</b>  Only a few candidates were given 3 marks, with many not making any attempt to give an answer. A few candidates wrote a correct value for either the car or garage and were given 1 mark. Others wrote multiple values, but didn't make it clear which were associated with the car and which were associated with the garage. Some wrote a list or gave boundaries that included unacceptable values and so were given 0 marks.

		<b>Total</b>		<b>2</b>		
42	a	29 500		1		
					<b><u>Examiner's Comments</u></b>	
					This question was not understood by most candidates. Nearly 70% of candidates gave the incorrect answer.  25 000, 29 005 and 30 000 were common incorrect responses.	
	b	Accept any correctly matched pair of values in which rugby < football from these ranges rugby: 30 450 to 30 498 and football: 30 451 to 30 499		2	<b>B1</b> for one value for rugby or football in these ranges  rugby from 30 450 to 30 498  or  football from 30 451 to 30 499	Error interval alone scores 0 Only mark candidate's chosen value(s) Rugby < football does not need to be stated  If a pair of values and rugby or football not stated assume the value on the left or below another is rugby

					For B1 if one or multiple values seen and no clear choice/designation all must be in range 30 451 to 30 498
					<b><u>Examiner's Comments</u></b>  This part was poorly answered and it seemed clear that many candidates did not understand what was needed. A number of error intervals (often incorrect) were presented that did not answer the question.  Very few candidates annotated their values and examiners were left to guess which might represent football and which rugby.
		<b>Total</b>	<b>3</b>		
43	a	240 with working	2	<b>B1</b> for rounded value of 80 or 3  If 0 scored <b>SC1</b> for 80.0 and 3.0 and 240.0 as answer	For 2 marks 80 and 3 must be seen
	b	No <b>oe</b> and [because] the answer should be close to 240 <b>oe</b>	1		Eg No his answer is ten times too big No the decimal point is in the wrong place

					See AG
				For additional information refer to <b>2022 November (J56002) Mark scheme Appendix</b> within downloadable additional mark guidance.	
				<b><u>Examiner's Comments</u></b>  Many candidates referred to the full stop as a problem, implying a second decimal point. Many answers were too vague, such as 'the answer is too high'. Many candidates did not see the link between parts (a) and (b). Others tried to work out the answer to $79.8 \times 3.1$ , usually incorrectly, to use this as a justification.	
	<b>Total</b>	<b>3</b>			
44	2.76 with correct working	4	<p><b>M2</b> for <math>\frac{15 \times 18}{120}</math> or <b>M1</b> for <math>15 \times 18</math> may be implied by 270</p> <p><b>M1</b> for <i>their</i> number of rolls <math>\times 92</math> or for <i>their</i> number of rolls <math>\times [0].92</math> If 0 scored <b>SC1</b> for answer 2.76 with no working or insufficient working</p> <p>Alternative method <b>M2</b> for <math>120 \div 18</math></p>	<p>"Correct working" requires evidence of at least the first M1 For M2 and M1 accept in other correct consistent units i.e m or mm</p> <p><i>their</i> number of rolls dep on at least M1 and must be 3, 23 or 225</p>	

					<p>= [6.6 to 6.7] and either <math>6 + 6</math> <math>= 12</math> or <math>6 + 6 + 6</math> <math>= 18</math> oe or <b>M1</b> for <math>120 \div 18</math> may be implied by 6.6 to 6.7 or 6</p> <p><b>M1</b> <math>3 \times 92</math> or <math>3 \times [0].92</math></p> <p>If <b>0</b> scored <b>SC1</b> for answer 2.76 with no or insufficient working</p>	<p>Dep on at least M1</p>
<p><b><u>Examiner's Comments</u></b></p> <p>Almost all candidates attempted the question. While a full clear method was sometimes lacking, sufficient working was shown to enable the credit of full marks for the correct answer in almost every instance. The mark scheme's two methods were seen with similar frequency. Those who started by finding the total length of ribbon required (<math>15 \times 18 = 270</math>) were more likely to continue with clear method or reasoning, such as one roll = 120 cm, two rolls = 240 cm, three rolls = 360 cm, so 3 rolls required. Candidates who found the number of cakes that could be decorated with one roll (<math>120 \div 18 = 6.67</math>) often struggled to fully justify why 3 rolls were needed.</p> <p>A common error was to assume each cake needed one roll, leading to <math>15 \times 92p = £13.80</math>. For others, a common starting point was to find <math>92 \times 15</math> (the cost of one roll of ribbon, multiplied by the number of cakes), suggesting that these candidates had not interpreted all the information given in the question and so were unable to</p>						

					identify all the necessary calculations to solve the problem.
					<b>Misconception</b>
				In problems where a quantity of material is needed for a particular purpose, the quantity purchased may have to be more than required and there may be some left over. In Question 7, some candidates did not realise the need to buy full rolls.	
		<b>Total</b>	<b>4</b>		
45	a	24.5 25.5 cao	2	<b>B1</b> for each  If 0 scored <b>SC1</b> for correct but reversed or for 24.50[0] and 25.50[0]	
				<b>Examiner's Comments</b>  Some candidates were able to give the correct answers. Several scored 1 mark, usually for the lower bound of 24.5. 25.4 was a common error for the upper bound.	
	b	4 × 25.5 or 4 × <i>their</i> upper bound in (a)  102 or correct answer to 4 × <i>their</i> upper bound  Yes and <i>their</i> 102 </≤ 102.4 in symbols or words  <u>Alternative method 1</u>  102.4 ÷ 4  25.6  Yes and <i>their</i> 25.5 </≤ 25.6 in	M1 A1 1 dep M1 A1 1 dep M1 A1 1 dep	Dep on previous 2 marks Conclusion and clear comparison <b>FT</b> <i>their</i> upper bound in (a)  Dep on previous 2 marks Conclusion and clear comparison <b>FT</b> <i>their</i> upper bound in (a)  Dep on previous 2 marks	<b>M0</b> if <i>w</i> = 25 used  Yes/ no conclusions must be consistent with their working

		<p>symbols or words</p> <p><u>Alternative method 2</u></p> <p><math>102.4 \div 25.5</math> or <math>102.4 \div</math> <i>their upper bound</i></p> <p><math>4.01(\dots)</math> or correct answer to <math>102.4 \div</math> <i>their upper bound</i></p> <p>Yes and <math>4 &lt; \leq</math> <i>their</i> <math>4.01(\dots)</math></p>		<p>Conclusion and clear comparison <b>FT</b> their upper bound in (a)</p> <p><b>Examiner's Comments</b></p> <p>Several candidates realised the need to use their upper bound. Some did not realise the connection between parts (a) and (b). The most common error was to use 25 as the upper bound, regardless of their upper bound in part (a). Many just did the calculation and did not give a reason.</p>

<b>Examiner's Comments</b>						
					<p>This problem solving question was attempted by most candidates and many scored some marks. Many however did not score the first B1 for converting from metres to centimetres or vice versa. The general error was to think that there are 10 cm in 1 m and so 280 cm was a common error.</p>	
				 <b>Misconception</b> <p>Some candidates thought that there were 10 or 1000 cm in 1 metre.</p> <p>Most candidates scored a mark for dividing 28 m by 60 cm, in some form. It was regrettable to see many candidates attempt this division by repeated subtraction, even for candidates with 2800 cm or even 28000 cm; such inefficient methods lead to errors and wasted time. Some candidates found 46.66... in some form and truncated this to the nearest integer for a further mark.</p>

4

**B3** for 15 000 oe  
or  $1.49[0..] \times 10^4$

e.g. 15 000 may  
be  $15 \times 10^3$

					<p>or  <b>B2</b> for 14 900 oe  or  <b>M1</b> for figs 181 – figs 32</p> <p>If 0 scored  <b>SC1</b> for <i>their</i> value correctly rounded to 2 significant figures</p>	<p>Subtraction may be implied e.g. by figs 15 or figs 149</p> <p><i>Their</i> unrounded value must be seen</p>
					<b>Examiner's Comments</b>	
					Many scored the first mark for subtracting the correct values, but very few correctly rounded to 2 significant figures and even fewer wrote this in standard form correctly. A number attempted to subtract the standard form numbers in the wrong order.

51		319.44 cao	1		<p><b>B3</b> for 9319.44 soi or for 319[.4...] as final answer</p> <p>OR</p> <p><b>M3</b> for <math>(9000 \times 1.007^5) - 9000</math></p> <p>OR</p> <p><b>M2</b> for <math>9000 \times 1.007^5</math> oe implied by 9319[.44...] or <math>9000 \times r^5 - 9000</math> oe</p> <p>OR</p> <p><b>M1</b> for <math>9000 \times 1.007^n</math> oe implied by 9126[.44...] (<math>n \neq 5</math> and <math>n \geq 2</math>) or <math>9000 \times r^n</math> oe (<math>n \geq 2</math>)</p>	<p>Answers of 315 and 9315 are from simple interest and score 0</p> <p>For <b>M2</b> and <b>M1</b> where <math>r = 1.7</math>, 1.07 or 1.0007</p>

					Candidates should be encouraged to use the compound interest formula rather than the 'year on year' method, as that often lead to the loss of the accuracy mark due to rounding off values for each year. Several candidates gave the value of the investment rather than the interest.
