## Physics

(Specifications A and B)

## PHA3/B3/XPM2

Unit 3      Investigative and Practical Skills in AS Physics  
Route X Externally Marked Practical Assignment (EMPA)

### Section A Task 2

**For this paper you must have:**

- a calculator
- a pencil
- a ruler.

### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Show all your working.
- Do all rough work in this book. Cross through any work you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for Section A Task 2 is 14.

**Section A Task 2**

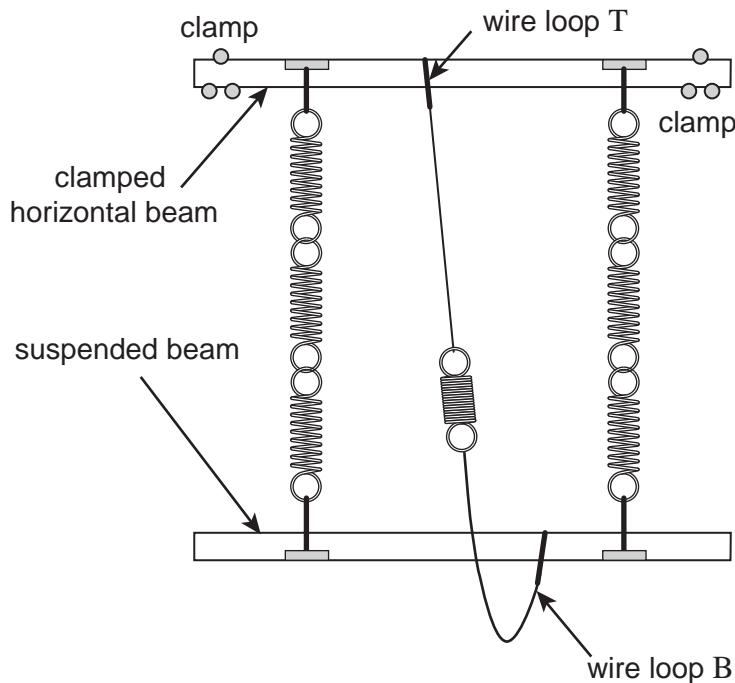

Follow the instructions given below.

Give the information required in the spaces provided.

No description of the experiment is required.

- 1** You are to investigate the spring system shown in **Figure 4**.

**Figure 4**

The suspended beam is supported from a clamped horizontal beam by two sets of three coupled springs.

**Do not move or adjust the clamps.**

Another spring has been connected between the beams by pieces of thread joined to wire loops T and B. The loops can slide along both beams between the coupled springs.

- 1 (a)** Attach the 100 g mass hanger to wire loop B.  
 Adjust the position of B until the suspended beam is horizontal.  
 Adjust the position of T until it is vertically above B and the apparatus appears as shown in **Figure 5**, on page 3.

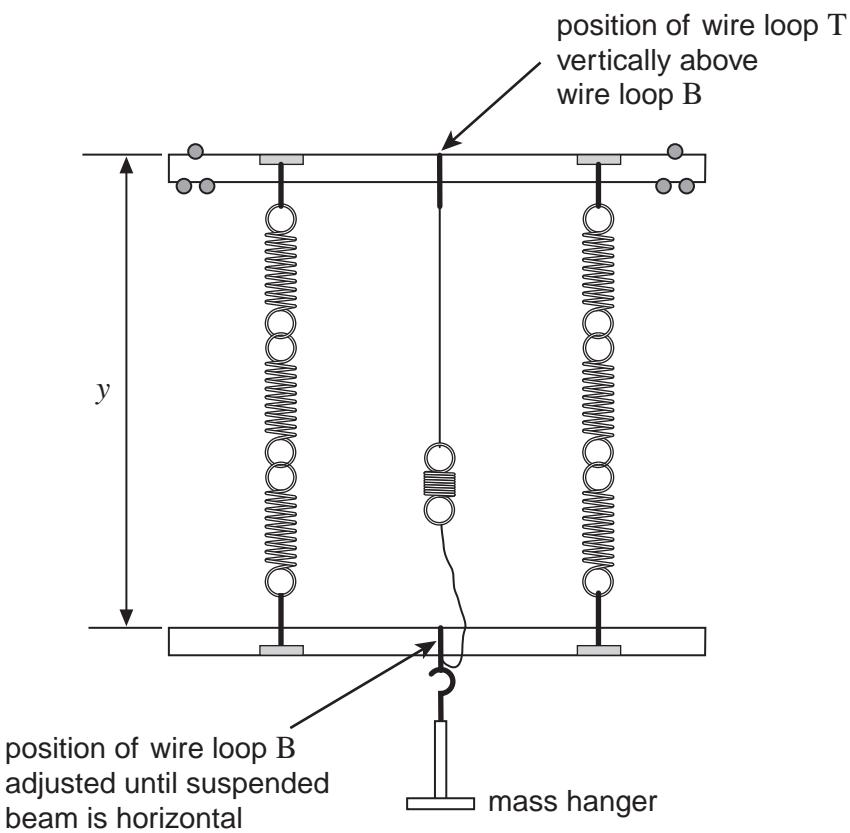

Explain how you ensured that loop T was vertically above loop B.

**[1 mark]**

.....

.....

.....

**Figure 5**

- 1 (b) (i)** Record  $m$ , the total mass supported from wire loop B.
- 1 (b) (ii)** Measure and record  $y$ , the vertical distance between the **top** of the clamped beam and the **top** of the suspended beam.
- 1 (c)** You are to make suitable measurements to determine values of  $y$  that correspond to different values of  $m$ .

You are provided with additional slotted masses.

Add these masses, in turn, to the mass hanger so that  $m$  increases in several stages until all the masses have been used.

As each additional mass is added make any necessary adjustment to the position of B to keep the suspended beam horizontal and adjust the position of T so that it remains vertically above B.

Record all your measurements for part (b) and part (c) on page 4 in a single well-organised table; the independent variable should be in the left-hand column of your table.

**Question 1 continues on the next page**

**Turn over ►**

Measurements and observations.

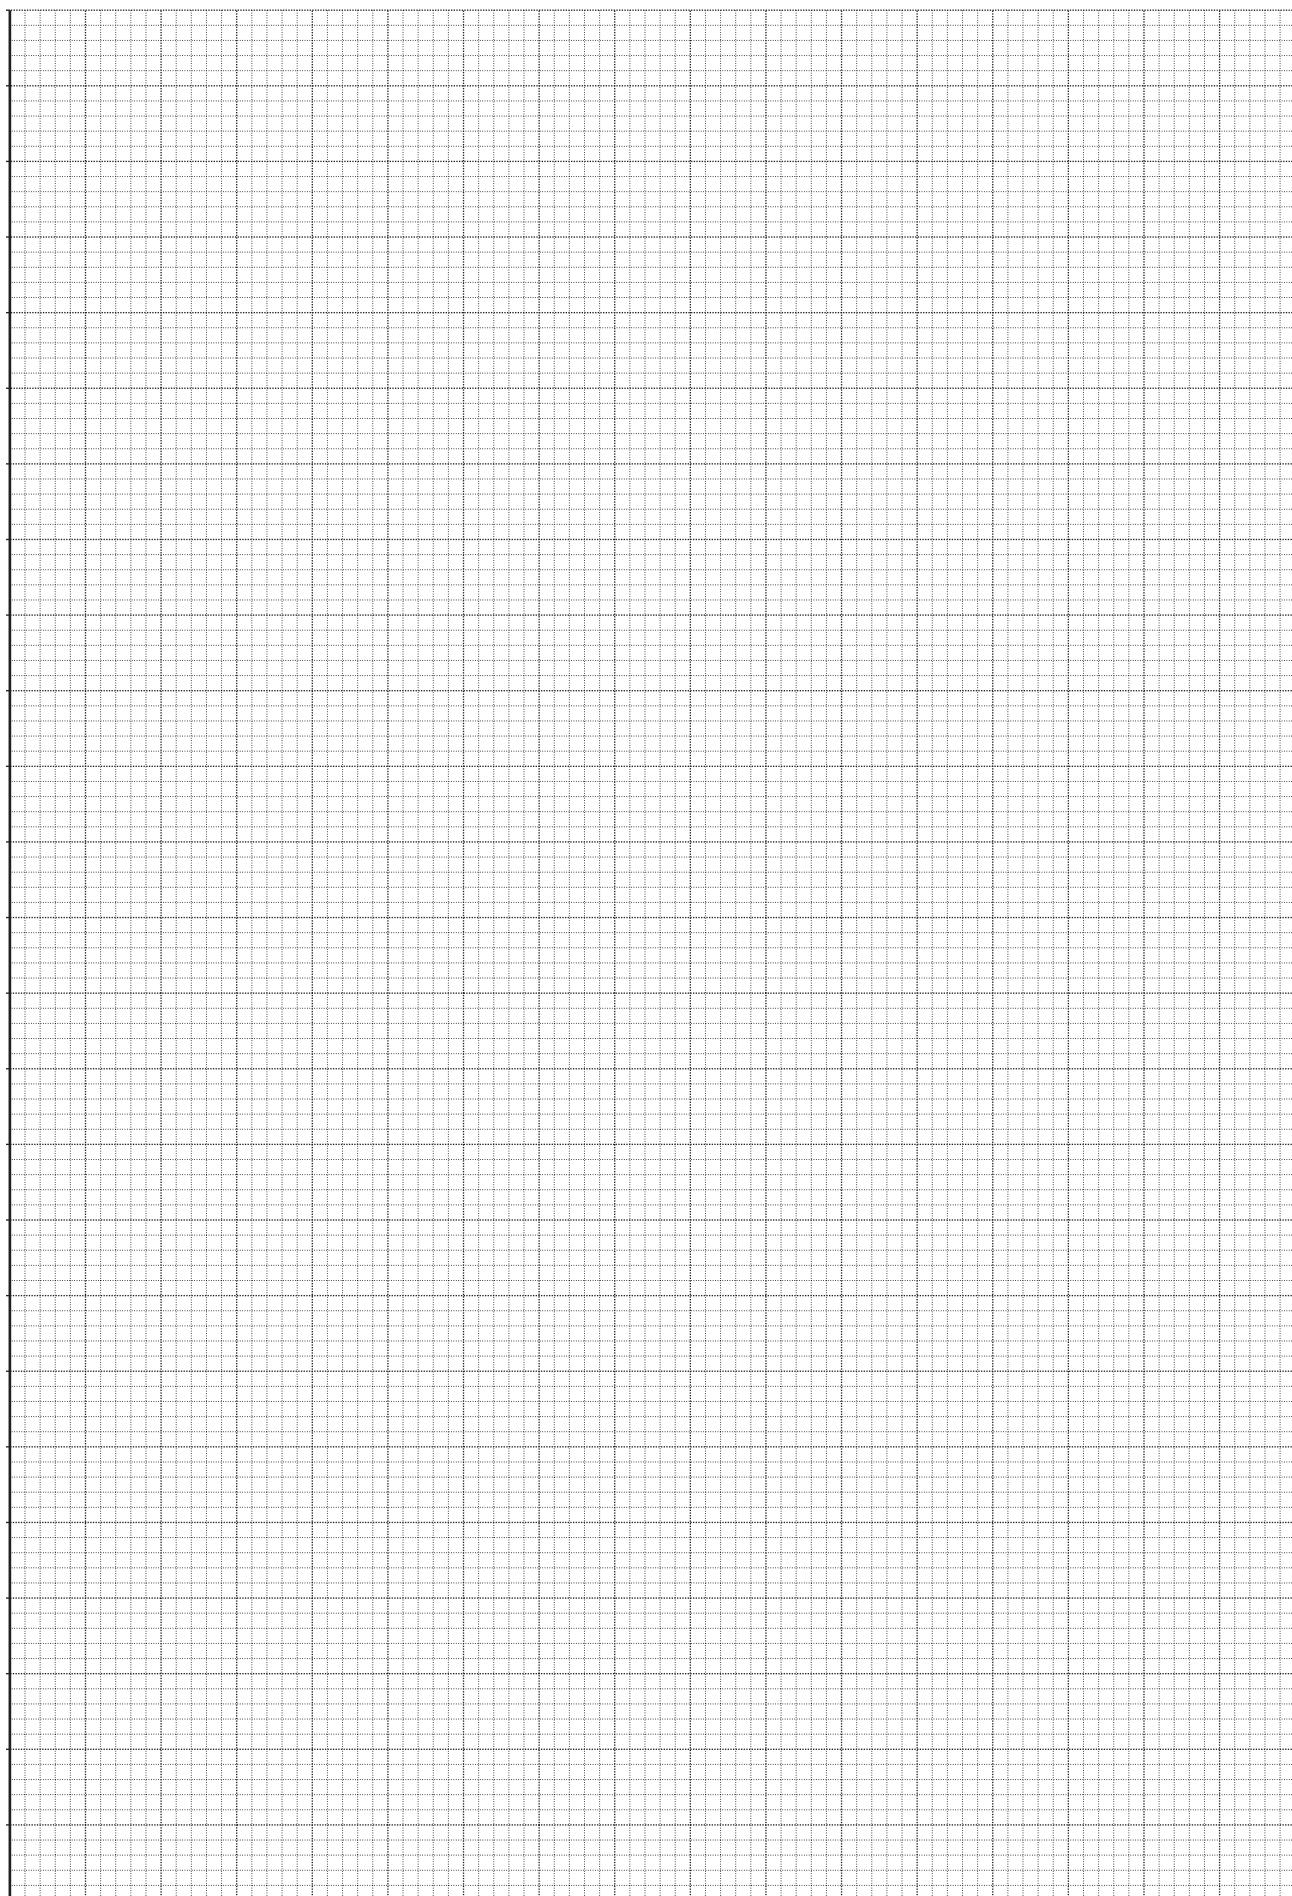

[4 marks]

- 1 (d) Plot on **Figure 6** a graph with  $y$  on the vertical axis and  $m$  on the horizontal axis.

[9 marks]

14
