Pearson Edexcel International Advanced
Subsidiary Level In Physics (WPH15) Paper 01
Thermodynamics, Radiation, Oscillations and
Cosmology

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Question Number	Answer	Mark
1	B is the correct answer , as this is part of the definition of s.h.m.	(1)
2	B is the correct answer A is incorrect, as this would increase the value of L_V C is incorrect, as it's not necessary to stir boiling water D is incorrect, as this would increase the value of L_V	(1)
3	D is the correct answer , as $T = 2\pi\sqrt{\frac{L}{g}}$ and $T = 2 \times 8.25\text{s}$	(1)
4	C is the correct answer , as the activity halves in each half-life period	(1)
5	A is the correct answer , as $pV \propto T$	(1)
6	D is the correct answer , as this is a statement of Hubble's law	(1)
7	B is the correct answer A is incorrect, as background count rate varies from place to place C is incorrect, as the background count is not constant D is incorrect, as some detector are more sensitive than others	(1)
8	B is the correct answer , as $I = \frac{L}{4\pi d^2}$	(1)
9	B is the correct answer A is incorrect, as the lines may be shifted into any region of the spectrum C is incorrect, as the intensity of the lines is not related to the redshift D is incorrect, as the wavelengths of the emitted lines is not affected	(1)
10	D is the correct answer , A is incorrect, as ^{56}Fe is the most stable isotope B is incorrect, as the graph shows the binding energy per nucleon C is incorrect, as high mass nuclei could be fused as long as energy is supplied	(1)

Question Number	Answer	Mark
11	At least 1 cycle of a sinusoidal graph	(1)
	Displacement axis shows amplitude as 5 cm	(1)
	Use of $a = (-)\omega^2 x$ and $\omega = \frac{2\pi}{T}$ to calculate T	(1)
	Time axis shows period as calculated value of T	(1)
	<u>Example of calculation</u>	
	$\omega = \sqrt{\frac{8.0 \text{ cm s}^{-2}}{5.0 \text{ cm}}} = 1.26 \text{ s}^{-1}$	
	$T = \frac{2\pi}{1.26 \text{ s}^{-1}} = 4.97 \text{ s}$	
	Total for question 11	4

Question Number	Answer	Mark
12	<p>Energy transferred from hot liquid = energy transferred to ice + energy transferred to cold water (1)</p> <p>[This may be implicit]</p> <p>Use of $E = mc\Delta\theta$ (1)</p> <p>Use of $E = mL$ (1)</p> <p>Mass of ice required to cool drink to 58 °C is 2.4×10^{-2} kg Or Final temperature using 4 g of ice is 69 °C (1)</p> <p>Valid conclusion based on a consideration of their calculated value in comparison with a corresponding value in the question. (1)</p> <p>(1) 5</p> <p><u>Example of calculation</u></p> <p>Energy transferred from hot liquid = energy transferred to ice + energy transferred to cold water</p> <p>$0.275 \text{ kg} \times 3750 \text{ J kg}^{-1}\text{K}^{-1} \times (71.5 - 58.0)\text{K}$ $= m \times 3.34 \times 10^5 \text{ J kg}^{-1} + m \times 4190 \text{ J kg}^{-1}\text{K}^{-1} \times (58.0 - 0)\text{K}$</p> <p>$\therefore 1.39 \times 10^4 \text{ J} = m \times (3.34 \times 10^5 + 2.43 \times 10^5) \text{ J kg}^{-1}$</p> <p>$\therefore m = \frac{1.39 \times 10^4 \text{ J}}{5.77 \times 10^5 \text{ J kg}^{-1}} = 2.41 \times 10^{-2} \text{ kg} = 24 \text{ g}$</p> <p>So 4 g would not bring the temperature below the ideal serving temperature.</p>
