advancing learning, changing lives

# Mark Scheme (Results) June 2010 

## GCE

## GCE Physics (6PH01)

Edexcel is one of the leading examining and awarding bodies in the UK and throughout the world. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers.

Through a network of UK and overseas offices, Edexcel's sentres receive the support they need to help them deliver their education and training programmes to learners.
For further information, please call our GCE line on 0844576 0025, our GCSE team on 0844 576 0027, or visit our website at www.edexcel.com.

If you have any subject specific questions about the content of this Mark Scheme that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Ask The Expert can be accessed online at the following link:
http:// www.edexcel.com/ Aboutus/ contact-us/

Alternatively, you can speak directly to a subject specialist at Edexcel on our dedicated Science telephone line: 08445760037

## Mark scheme notes

## Underlying principle

The mark scheme will clearly indicate the concept that is being rewarded, backed up by examples. It is not a set of model answers.

For example:
(iii) Horizontal force of hinge on table top
$66.3(\mathrm{~N})$ or $66(\mathrm{~N})$ and correct indication of direction [no ue]
[Some examples of direction: acting from right (to left) / to the left / West
/ opposite direction to horizontal. May show direction by arrow. Do not accept a minus sign in front of number as direction.]

This has a clear statement of the principle for awarding the mark, supported by some examples illustrating acceptable boundaries.

## 1. Mark scheme format

1.1 You will not see 'wtte' (words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific words that must be present. Such words will be indicated by underlining e.g. 'resonance'
1.2 Bold lower case will be used for emphasis.
1.3 Round brackets ( ) indicate words that are not essential e.g. "(hence) distance is increased".
1.4 Square brackets [ ] indicate advice to examiners or examples e.g. [Do not accept gravity] [ecf].
2. Unit error penalties
2.1 A separate mark is not usually given for a unit but a missing or incorrect unit will normally cause the final calculation mark to be lost.
2.2 Incorrect use of case e.g. 'Watt' or 'w' will not be penalised.
2.3 There will be no unit penalty applied in 'show that' questions or in any other question where the units to be used have been given.
2.4 The same missing or incorrect unit will not be penalised more than once within one question.
2.5 Occasionally, it may be decided not to penalise a missing or incorrect unit e.g. the candidate may be calculating the gradient of a graph, resulting in a unit that is not one that should be known and is complex.
2.6 The mark scheme will indicate if no unit error penalty is to be applied by means of [no ue].

## 3. Significant figures

3.1 Use of an inappropriate number of significant figures in the theory papers will normally only be penalised in 'show that' questions where use of too few significant figures has resulted in the candidate not demonstrating the validity of the given answer.

## 4. Calculations

4.1 Bald (i.e. no working shown) correct answers score full marks unless in a 'show that' question.
4.2 If a 'show that' question is worth 2 marks then both marks will be available for a reverse working; if it is worth 3 marks then only 2 will be available.
4.3 use of the formula means that the candidate demonstrates substitution of physically correct values, although there may be conversion errors e.g. power of 10 error.
4.4 recall of the correct formula will be awarded when the formula is seen or implied by substitution.
4.5 The mark scheme will show a correctly worked answer for illustration only.
4.6 Example of mark scheme for a calculation:

## 'Show that' calculation of weight

Use of $\mathrm{L} \times \mathrm{W} \times \mathrm{H}$
Substitution into density equation with a volume and density
Correct answer [49.4 (N)] to at least 3 sig fig. [No ue]
[If 5040 g rounded to 5000 g or 5 kg , do not give $3^{\text {rd }}$ mark; if conversion to kg is omitted and then answer fudged, do not give $3^{\text {rd }}$ mark]
[Bald answer scores 0, reverse calculation 2/ 3]
Example of answer:
$80 \mathrm{~cm} \times 50 \mathrm{~cm} \times 1.8 \mathrm{~cm}=7200 \mathrm{~cm}^{3}$
$7200 \mathrm{~cm}^{3} \times 0.70 \mathrm{~g} \mathrm{~cm}^{-3}=5040 \mathrm{~g}$
$5040 \times 10^{-3} \mathrm{~kg} \times 9.81 \mathrm{~N} / \mathrm{kg}$
$=49.4 \mathrm{~N}$
5. Quality of Written Communication
5.1 Indicated by QoWC in mark scheme. QWC - Work must be clear and organised in a logical manner using technical wording where appropriate.
5.2 Usually it is part of a max mark.
6. Graphs
6.1 A mark given for axes requires both axes to be labelled with quantities and units, and drawn the correct way round.
6.2 Sometimes a separate mark will be given for units or for each axis if the units are complex. This will be indicated on the mark scheme.
6.3 A mark given for choosing a scale requires that the chosen scale allows all points to be plotted, spreads plotted points over more than half of each axis and is not an awkward scale e.g. multiples of 3,7 etc.
6.4 Points should be plotted to within 1 mm .

- Check the two points furthest from the best line. If both OK award mark.
- If either is 2 mm out do not award mark.
- If both are 1 mm out do not award mark.
- If either is 1 mm out then check another two and award mark if both of these OK, otherwise no mark.
For a line mark there must be a thin continuous line which is the best-fit line for the candidate's results.

| Question <br> Number | Answer | Mark |
| :--- | :--- | ---: |
| 1 | A | $(1)$ |
| 2 | D | $(1)$ |
| 3 | C | $(1)$ |
| 4 | A | $(1)$ |
| 5 | C | $(1)$ |
| 6 | B | $(1)$ |
| 7 | A | $(1)$ |
| 8 | C | $(1)$ |
| 9 | D | $(1)$ |
| 10 | D | $(1)$ |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 1}$ | Complete the diagram <br> Before A = laminar flow - minimum of 2 continuous smooth <br> lines roughly parallel to wing surface which don't cross | (1) |
| After A = turbulent flow - lines crossing, eddies, sudden <br> changes in direction, change in direction $>90^{\circ}$, lines <br> disappearing and appearing | (1) |  |
|  | Total for question 11 | $\mathbf{2}$ |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 2}$ | Explain the difference between elastic deformation and plastic <br> deformation <br> QWC - spelling of technical terms must be correct and the answer <br> must be organised in a logical sequence <br> Elastic - returns to original shape when deforming force/ stress <br> removed / no permanent deformation <br> Plastic - doesn't return to original shape when deforming <br> force/ stress removed / permanent deformation <br> Suitable material or object named which undergoes elastic and <br> plastic deformation, e.g. spring/ wire/ strawberry laces - do not <br> accept rubber / elastic band but accept balloon <br> Illustration comparing both types of deformation under <br> different force / stress / strain / amount of deformation for <br> material / object (independent of material mark) | (1) |
|  | (1) |  |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 13(a) (i) | Show that the initial horizontal component of velocity for the drop is about $1 \mathrm{~m} \mathrm{~s}^{-1}$. <br> Shows a correct, relevant trigonometrical relationship <br> Correct answer for horizontal component ( $1.2\left(\mathrm{~m} \mathrm{~s}^{-1}\right)$ ) <br> Example of calculation $\begin{aligned} & v_{\mathrm{h}}=v \cos \theta \\ & =3.5 \mathrm{~m} \mathrm{~s}^{-1} \times \cos 70^{\circ} \\ & =1.2 \mathrm{~m} \mathrm{~s}^{-1} \end{aligned}$ | (1) (1) |
| 13(a)(ii) | Calculate the vertical distance to the insect if the shot is successful. <br> Use of equation of motion suitable for time <br> Calculates time (allow 1/3) <br> Use of trigonometry or Pythagoras suitable to find vertical component of speed <br> Use of equation of motion suitable to find distance <br> Correct answer ( 0.55 m ) <br> If using $v^{2}=u^{2}+2 a s:$ <br> Use of trigonometry or Pythagoras suitable to find vertical component of speed(1) <br> Use of equation of motion suitable to find distance (1) <br> Substitute $v=0$ (1) <br> Substitute $g$ negative (1) <br> Correct answer (1) <br> Answers based on $\mathrm{mgh}=1 / 2 \mathrm{mv}^{2}$ coincidentally giving correct answer are not credited as $v^{2}=u^{2}+2$ as unless conservation of energy fully described, i.e. ke at bottom using $u=3.5 \mathrm{~m} \mathrm{~s}^{-1}$ and ke at top due to only horizontal motion accounted for <br> Example of calculation $\begin{aligned} & \mathrm{t}=\mathrm{s} / \mathrm{v} \\ & =0.4 \mathrm{~m} / 1.2 \mathrm{~m} \mathrm{~s}^{-1}=0.33 \mathrm{~s} \\ & \mathrm{v}_{\mathrm{v}}=\mathrm{v} \sin \theta \\ & =3.5 \mathrm{~m} \mathrm{~s}^{-1} \times \sin 70^{\circ} \\ & =3.3 \mathrm{~m} \mathrm{~s}^{-1} \\ & \mathrm{~s}=\mathrm{ut}+1 / 2 \mathrm{at}^{2} \\ & =3.3 \mathrm{~m} \mathrm{~s}^{-1} \times 0.33 \mathrm{~s}-1 / 2 \times 9.81 \mathrm{~m} \mathrm{~s}^{-2} \times(0.33 \mathrm{~s})^{2} \\ & =0.55 \mathrm{~m} \end{aligned}$ | (1) (1) (1) (1) (1) |
| 13(b) | Sketch the path of the water droplet <br> Any section of an approximate parabolic path | (1) |
|  | Total for question 13 | 8 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 14 (a) | Show that the upthrust is about $8 \times 10^{-4} \mathrm{~N}$ <br> Use of mass $=$ density x volume <br> Correct answer for upthrust ( $=8.3 \times 10^{-4}(\mathrm{~N})$ ) <br> Example of calculation <br> mass of liquid displaced $=$ density $\times$ volume <br> $=1300 \mathrm{~kg} \mathrm{~m}^{-3} \times 6.5 \times 10^{-8} \mathrm{~m}^{3}=8.45 \times 10^{-5} \mathrm{~kg}$ upthrust $=8.45 \times 10^{-5} \mathrm{~kg} \times 9.81 \mathrm{~m} \mathrm{~s}^{-2}$ $=8.3 \times 10^{-4} \mathrm{~N}$ | (1) |
| 14 (b) | Show that the viscosity of the liquid is about $2 \mathrm{~kg} \mathrm{~m}^{-1} \mathrm{~s}^{-1}$ <br> Correct summary of forces, e.g. $\mathrm{V}=\mathrm{W}-\mathrm{U}$ <br> Use of $\mathrm{F}=6 \pi \eta \mathrm{rv}$ <br> Correct answer for viscosity ( $1.8\left(\mathrm{~kg} \mathrm{~m}^{-1} \mathrm{~s}^{-1}\right)$ ) <br> Example of calculation $\begin{aligned} & \text { Viscous drag }=\mathrm{W}-\mathrm{U}=4.8 \times 10^{-3} \mathrm{~N}-8.3 \times 10^{-4} \mathrm{~N}=3.97 \times 10^{-3} \mathrm{~N} \\ & \mathrm{~F}=6 \pi \eta \mathrm{rv} \\ & \eta=3.97 \times 10^{-3} \mathrm{~N} /\left(6 \times \pi \times 4.6 \times 10^{-2} \mathrm{~m} \mathrm{~s}^{-1} \times 2.5 \times 10^{-3} \mathrm{~m}\right) \\ & =1.8 \mathrm{~kg} \mathrm{~m}^{-1} \mathrm{~s}^{-1} \end{aligned}$ <br> [Watch out for out of clip answers] | (1) (1) (1) |
| 14 (c) | State a relevant variable to control Temperature | (1) |
|  | Total for question 14 | 6 |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 5 ( a )}$ | Explain the meaning of the terms: <br> Ductile - can be made/ drawn into wires / <br> shows significant/ large/ lots of plastic deformation / large <br> plastic region <br> Brittle - shatters when subject to impact / sudden force <br> fails/ breaks/ cracks with little or no plastic deformation / <br> breaks just beyond elastic limit / breaks just beyond limit of <br> proportionality / breaks under stress due to propagation of <br> cracks | (1) |
| $\mathbf{1 5 ( b )}$ | Calculate the mass that would produce this load. <br> Use of $\mathrm{W}=\mathrm{mg}$ <br> Correct answer (3600 kg) <br> Example of calculation <br> W = mg <br> $\mathrm{m}=35000 \mathrm{~N} / 9.81 \mathrm{~N} \mathrm{~kg}$ <br> $=3570 \mathrm{~kg}$ | (1) |
|  | Total for question $\mathbf{1 5}$ | (1) |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 16(a) | Show that the acceleration is about $2 \mathrm{~m} \mathrm{~s}^{-2}$. <br> Use of equation of motion suitable to find acceleration Correct answer ( 1.5 ( $\mathrm{m} \mathrm{s}^{-2}$ )) <br> Example of calculation $\begin{aligned} & s=u t+1 / 2 \mathrm{at}^{2} \\ & \mathrm{a}=2 \times 2500000 \mathrm{~m} /((30 \times 60) \mathrm{s})^{2} \\ & =1.54 \mathrm{~m} \mathrm{~s}^{-2} \end{aligned}$ | (1) |
| 16 (b) | Calculate the maximum speed. <br> Use of equation of motion suitable to find maximum speed Correct answer ( $2700 \mathrm{~m} \mathrm{~s}^{-1}$ ) $\begin{aligned} & \text { Example of calculation } \\ & \begin{array}{l} v=u+a t \\ =0+1.5 \mathrm{~m} \mathrm{~s}^{-2} \times(30 \times 60) \mathrm{s} \\ =1.5 \mathrm{~m} \mathrm{~s}^{-2} \times(30 \times 60) \mathrm{s} \\ =2700 \mathrm{~m} \mathrm{~s}^{-1} \\ \text { (Use of } \left.2 \mathrm{~m} \mathrm{~s}^{-2} \rightarrow 3600 \mathrm{~m} \mathrm{~s}^{-1}, 1.54 \mathrm{~m} \mathrm{~s}^{-2} \rightarrow 2772 \mathrm{~m} \mathrm{~s}^{-1}\right), \end{array} \end{aligned}$ | (1) |
| 16 (c) | Calculate the force which must be applied to decelerate the train. <br> Use of $F=m a$ <br> Correct answer ( 680000 N ) <br> Example of calculation $\begin{aligned} & \bar{F}=\mathrm{ma} \\ & =4.5 \times 10^{5} \mathrm{~kg} \times 1.5 \mathrm{~m} \mathrm{~s}^{-2} \\ & =675000 \mathrm{~N} \\ & \text { (Use of } 2 \mathrm{~m} \mathrm{~s}^{-2} \rightarrow 900000 \mathrm{~N}, 1.54 \mathrm{~m} \mathrm{~s}^{-2} \rightarrow 693000 \mathrm{~N} \text { ) } \end{aligned}$ | (1) |
|  | Total for question 16 | 6 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 17(a) | Sketch a vector diagram <br> Correct diagram - closed polygon, accept a triangle using the resultant of lift and weight, but arrows must follow correctly. Must show sequence of tip-to-tail arrowed vectors. | (1) |
| 17(b) | Find the tension in the string. <br> Use of trigonometrical function for the horizontal angle (allow mark for vertical angle if correct and shown on dia) <br> Correct answer for horizontal angle ( $32.8^{\circ}$ ) <br> Use of Pythagoras or trigonometrical function for the tension Correct answer for tension magnitude (7.1 N) <br> Example of calculation <br> weight - lift $=3.86 \mathrm{~N}$ <br> from horizontal, $\tan ($ angle $)=3.86 \mathrm{~N} / 6.0 \mathrm{~N}$ <br> angle $=32.8^{\circ}$ <br> $\mathrm{T}^{2}=\mathrm{F}_{\mathrm{h}}{ }^{2}+\mathrm{F}_{\mathrm{v}}{ }^{2}$ $=(6.0 \mathrm{~N})^{2}+(3.86 \mathrm{~N})^{2}$ $\mathrm{T}=7.1 \mathrm{~N}$ | (1) (1) (1) (1) |
| 17(c) (i) | Calculate the work done by the girl. <br> Use of $\mathrm{W}=\mathrm{Fs}$ <br> Correct answer (150 J) $\begin{aligned} & \text { Example of calculation } \\ & \begin{array}{l} \mathrm{W}=\mathrm{Fs}=6.0 \mathrm{~N} \times 25 \mathrm{~m} \\ =150 \mathrm{~J} \end{array} \end{aligned}$ | (1) (1) |
| $\begin{aligned} & 17(c) \\ & \text { (ii) } \end{aligned}$ | Calculate rate at which work is done <br> Finds time <br> Correct rate (12 W) <br> Example of calculation $\begin{aligned} & \mathrm{t}=\mathrm{s} / \mathrm{v}=25 \mathrm{~m} / 2.0 \mathrm{~m} \mathrm{~s}^{-1}=12.5 \mathrm{~s} \\ & \mathrm{P}=150 \mathrm{~J} / 12.5 \mathrm{~s} \\ & =12 \mathrm{~W} \end{aligned}$ | (1) |
|  | Total for question 17 | 9 |

\begin{tabular}{|c|c|c|}
\hline Question Number \& Answer \& Mark \\
\hline 18 (a) \& \begin{tabular}{l}
Explain this demonstration and the need for the precautions. \\
QWC - spelling of technical terms must be correct and the answer must be organised in a logical sequence \\
Max 4 from this part \\
It will not strike the student's face / at most will just touch / returns to starting point \\
The total energy of the pendulum is constant / energy is conserved \\
It cannot move higher than its starting point ... \\
... because that would require extra gpe (consequent on previous mark) \\
Mention specific energy transfer: gpe \(\rightarrow \mathrm{ke} / \mathrm{ke} \rightarrow\) gpe \\
Energy dissipated against air resistance ... \\
... will stop it quite reaching its starting point (consequent on attempt at describing energy loss mechanism) \\
Max 4 from this part \\
Pushing does work on the ball / pushing provides extra energy If pushed, it can move higher (accept further) \\
... will hit the student \\
If the face moves (forward) the ball may reach it (before it is at its maximum height) OR if the face moves (back) the ball won't reach it
