Mark Scheme (Results)
Summer 2014

Pearson Edexcel GCE in Physics (6PH02)
Paper 01 Physics at Work

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www. pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## Mark Scheme Notes

## Underlying principle

The mark scheme will clearly indicate the concept that is being rewarded, backed up by examples. It is not a set of model answers.

For example:

| (iii) | Horizontal force of hinge on table top <br> 66.3 (N) or 66 (N) and correct indication of direction [no ue] <br> [Some examples of direction: acting from right (to left) / to the <br> left / West / opposite direction to horizontal. May show direction <br> by arrow. Do not accept a minus sign in front of number as <br> direction.] | $\checkmark$ | $\mathbf{1}$ |
| :--- | :--- | :--- | :--- |

This has a clear statement of the principle for awarding the mark, supported by some examples illustrating acceptable boundaries.

## 1. Mark scheme format

1.1 You will not see 'wtte' (words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific words that must be present. Such words will be indicated by underlining e.g. 'resonance'
1.2 Bold lower case will be used for emphasis.
1.3 Round brackets ( ) indicate words that are not essential e.g. "(hence) distance is increased".
1.4 Square brackets [ ] indicate advice to examiners or examples e.g. [Do not accept gravity] [ecf].

## 2. Unit error penalties

2.1 A separate mark is not usually given for a unit but a missing or incorrect unit will normally mean that the final calculation mark will not be awarded.
2.2 Incorrect use of case e.g. 'Watt' or ' $w$ ' will not be penalised.
2.3 There will be no unit penalty applied in 'show that' questions or in any other question where the units to be used have been given, for example in a spreadsheet.
2.4 The same missing or incorrect unit will not be penalised more than once within one question (one clip in epen).
2.5 Occasionally, it may be decided not to penalise a missing or incorrect unit e.g. the candidate may be calculating the gradient of a graph, resulting in a unit that is not one that should be known and is complex.
2.6 The mark scheme will indicate if no unit error penalty is to be applied by means of [no ue].

## 3. Significant figures

3.1 Use of an inappropriate number of significant figures in the theory papers will normally only be penalised in 'show that' questions where use of too few significant figures has resulted in the candidate not demonstrating the validity of the given answer.
3.2 The use of $\mathrm{g}=10 \mathrm{~m} \mathrm{~s}^{-2}$ or $10 \mathrm{~N} \mathrm{~kg}^{-1}$ instead of $9.81 \mathrm{~m} \mathrm{~s}^{-2}$ or $9.81 \mathrm{~N} \mathrm{~kg}^{-1}$ will be penalised by one mark (but not more than once per clip). Accept $9.8 \mathrm{~m} \mathrm{~s}^{-2}$ or $9.8 \mathrm{~N} \mathrm{~kg}^{-1}$

## 4. Calculations

4.1 Bald (i.e. no working shown) correct answers score full marks unless in a 'show that' question.
4.2 If a 'show that' question is worth 2 marks then both marks will be available for a reverse working; if it is worth 3 marks then only 2 will be available.
4.3 use of the formula means that the candidate demonstrates substitution of physically correct values, although there may be conversion errors e.g. power of 10 error.
4.4 recall of the correct formula will be awarded when the formula is seen or implied by substitution.
4.5 The mark scheme will show a correctly worked answer for illustration only.
4.6 Example of mark scheme for a calculation:

## 5. Quality of Written Communication

5.1 Indicated by QoWC in mark scheme. QWC - Work must be clear and organised in a logical manner using technical wording where appropriate.
5.2 Usually it is part of a max mark, the final mark not being awarded unless the QoWC condition has been satisfied.

## 6. Graphs

6.1 A mark given for axes requires both axes to be labelled with quantities and units, and drawn the correct way round.
6.2 Sometimes a separate mark will be given for units or for each axis if the units are complex. This will be indicated on the mark scheme.
6.3 A mark given for choosing a scale requires that the chosen scale allows all points to be plotted, spreads plotted points over more than half of each axis and is not an awkward scale e.g. multiples of 3, 7 etc.
6.4 Points should be plotted to within 1 mm .

- Check the two points furthest from the best line. If both OK award mark.
- If either is 2 mm out do not award mark.
- If both are 1 mm out do not award mark.
- If either is 1 mm out then check another two and award mark if both of these OK, otherwise no mark.
For a line mark there must be a thin continuous line which is the best-fit line for the candidate's results.

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1}$ | C |  |
| $\mathbf{2}$ | C | $\mathbf{1}$ |
| $\mathbf{3}$ | C | $\mathbf{1}$ |
| $\mathbf{4}$ | C | $\mathbf{1}$ |
| $\mathbf{5}$ | B | $\mathbf{1}$ |
| $\mathbf{6}$ | D | $\mathbf{1}$ |
| $\mathbf{7}$ | A | $\mathbf{1}$ |
| $\mathbf{8}$ | B | $\mathbf{1}$ |
| $\mathbf{9}$ | B | $\mathbf{1}$ |
| $\mathbf{1 0}$ | B | $\mathbf{1}$ |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 1}$ | Oscillations/vibrations of (air) particles/molecules/atoms <br> Oscillations/vibrations/displacement parallel to direction of <br> propagation <br> Or Oscillations/vibrations/displacement parallel to direction of <br> energy transfer <br> (Producing) compressions and rarefactions Or regions of high and <br> low pressure Or it is a longitudinal wave | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 2}$ | (high resistance) so very little /negligible/zero current in the voltmeter <br> Or because otherwise a current would pass through the voltmeter <br> Or so the total resistance of the parallel combination isn't changed <br> Or because otherwise total resistance of parallel combination would <br> be reduced | (1) |
| because that would change /increase the current in the ammeter |  |  |
| Or |  |  |
| because that would mean the current through the ammeter was different |  |  |
| to (larger than) the current through the component |  |  |
| . Total for question 12 | (1) | $\mathbf{2}$ |

| Question <br> Number | Answer | Mark |  |
| :--- | :--- | :---: | :---: |
| 13(a) | Correct curve in + + section (accept $V-I$ or $I-V$ graph but axes <br> must be labelled) <br> Symmetrical negative curve (accept if ++ curve incorrect) <br> $I$ | (1) | 2 |
| 13(b) | Drift velocity (of electrons) increases (as current increases) <br> Or electrons gain (kinetic) energy (as current increases) <br> Or rate of flow of electrons/charge increases (as current increases) <br> More (frequent) collisions of electrons with lattice ions <br> lattice ion vibrations increased <br> Or (More) energy dissipated as heat in lattice <br> Or (More) energy transferred when electrons collide with lattice <br> ions <br> (accept charge carriers for electrons and atoms/ions/particles for <br> lattice ions.) | (1) | (1) |

| Question <br> Number | Answer <br> 14(a) <br> Polarised - oscillations/vibrations in single direction <br> oscillations/vibrations are perpendicular to direction of propagation <br> Or <br> Unpolarised - oscillations/vibrations in many planes <br> Polarised - oscillations/vibrations in single plane <br> Plane includes direction of propagation | (1) |
| :--- | :--- | :--- | :--- |

| Question Number | Answer |  | Mark |
| :---: | :---: | :---: | :---: |
| 15(a) | max kinetic energy Or $\mathrm{ke}_{\text {max }}$ <br> joule/J Or electronvolt/eV <br> Or <br> stopping potential $\mathbf{O r} V_{\mathrm{s}}$ <br> volt/V <br> (Unit mark can be scored if no quantity given. <br> If incorrect quantity given no marks awarded but KE/energy in joules/eV scores MP2) | (1) <br> (1) <br> (1) <br> (1) | 2 |
| 15(b) | Idea that one photon is absorbed by one electron <br> Photon energy given by $E=h f$ <br> Or photon energy increases with frequency <br> The idea that there is a minimum energy needed for emission of a (photo)electron <br> (So) emission of electrons only occurs if frequency of light greater than the threshold frequency <br> Or threshold frequency is the minimum frequency for the emission of (photo)electrons | (1) <br> (1) <br> (1) <br> (1) | 4 |
|  | Total for question 15 |  | 6 |

| Question Number | Answer |  | Mark |
| :---: | :---: | :---: | :---: |
| 16(a)(i) | Use of $P=I V$ <br> Power $=2900 \mathrm{~W}$ <br> Example of calculation $\text { Power }=12.5 \mathrm{~A} \times 230 \mathrm{~V}=2875 \mathrm{~W}$ | (1) <br> (1) | 2 |
| 16(a)(ii) | $\begin{aligned} & P=E / t \\ & \text { Energy }=400000 \mathrm{~J}(\text { ecf from (i)) } \\ & \text { Example of calculation } \\ & \text { Energy }=2875 \mathrm{~W} \times 140 \mathrm{~s}=402500 \mathrm{~J} \end{aligned}$ | (1) <br> (1) | 2 |
| 16(a)(iii) | Use of efficiency = useful energy output / total energy input $=0.87$ or $87 \%$ (ecf from (ii)) (do not award if > 100\%) <br> Example of calculation $\text { Efficiency = } 351000 \mathrm{~J} / 402500 \mathrm{~J}=0.87 \text { or } 87 \%$ | (1) <br> (1) | 2 |
| 16(b) | Some energy transferred by heating the kettle / element / wires / surroundings <br> Or Some energy transferred as sound <br> So not all of the (input) energy is transferred to (heating) the water Or so useful energy output is less than energy input Or only the energy heating the water is useful | (1) <br> (1) | 2 |
|  | Total for question 16 |  | 8 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 18(a)(i) | Determines width of at least 9 coils <br> Use of half of their diameter in $\pi r^{2}$ <br> Area $=(1.96$ to 2.42$) \times 10^{-7}\left(\mathrm{~m}^{2}\right)$ <br> Example of calculation <br> 18 coils $=1.00 \mathrm{~cm}$ <br> Diameter $=0.0100 \mathrm{~m} \div 18=5.56 \times 10^{-4} \mathrm{~m}$ <br> Area $=\pi \times\left(5.56 \times 10^{-4} \div 2\right)^{2}$ <br> Area $=2.42 \times 10^{-7} \mathrm{~m}^{2}$ | 3 |
| 18(a)(ii) | Use of $R=\rho l / A$ <br> Resistivity magnitude $=4.4 \times 10^{-7}$ (show that value gives $3.7 \times 10^{-7}$ ) <br> Unit $\Omega \mathrm{m}$ $\begin{aligned} & \text { Example of calculation } \\ & \rho=R A / l \\ & =22 \Omega \times 2.4 \times 10^{-7} \mathrm{~m}^{2} / 12 \mathrm{~m} \\ & =4.4 \times 10^{-7} \Omega \mathrm{~m} \end{aligned}$ | 3 |
| 18(a)(iii) | A sensible response with some detail, e.g. <br> - Avoid difficulty in reading a small scale while holding it and counting turns <br> - it can be enlarged and done more accurately <br> - compare with unravelling and using a micrometer <br> - remains stationary, so easier to measure accurately <br> - you can mark the coils as you go so you don't lose count (treat parallax as neutral and ) | 1 |
| 18(b) | Use of ratio of lengths $\times \mathrm{pd}$ $\begin{equation*} V=8.2 \mathrm{~V} \tag{1} \end{equation*}$ <br> Example of calculation $\begin{aligned} & V=(7.0 \mathrm{~cm} / 10.2 \mathrm{~cm}) \times 12 \mathrm{~V} \\ & =8.2 \mathrm{~V} \end{aligned}$ | 2 |
|  | Total for question 18 | 9 |

| Question Number | Answer |  | Mark |
| :---: | :---: | :---: | :---: |
| *19(a) | (QWC- Work must be clear and organised in a logical manner using technical wording where appropriate.) <br> Distance : <br> Speed of waves known Or refers to speed of light <br> Use (distance $=$ ) speed $\times$ time $\div 2$ <br> Relative speed: <br> (Relative) speed indicated by a change in frequency <br> Larger change indicates a greater speed <br> Amount of rain: <br> The intensity/amount of reflected signal increases as the amount of rain increases. <br> Reason for the larger signal <br> e.g. larger area, more drops or larger drops | (1) <br> (1) <br> (1) <br> (1) <br> (1) <br> (1) | 6 |
| 19(b)(i) | Pulses, so the reflected signal is received before next one is sent Or otherwise there wouldn't be a way of telling which bit of reflected signal originated with which bit of emitted signal Or so that reflected pulses can be distinguished from each other <br> ( Answers in terms of avoiding interference between two waves / standing waves not accepted) | (1) | 1 |
| 19(b)(ii) | Use of $v=s / t$ with $v=3 \times 10^{8}\left(\mathrm{~m} \mathrm{~s}^{-1}\right)$ Selects the smaller distance 5 km $t=3.3 \times 10^{-5} \mathrm{~s}$ $\begin{aligned} & \begin{array}{l} \text { Example of calculation } \\ t=5000 \mathrm{~m} \times 2 / 3 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1} \\ t=3.3 \times 10^{-5} \mathrm{~s} \end{array} \end{aligned}$ <br> (Do not credit answers involving wavelength) | $\begin{aligned} & \hline \text { (1) } \\ & \text { (1) } \\ & \text { (1) } \end{aligned}$ | 3 |
|  | Total for question 19 |  | 10 |

| $\begin{array}{l}\text { Question } \\ \text { Number }\end{array}$ | Answer | Mark |  |
| :--- | :--- | :---: | :---: |
| 20(a) | $\begin{array}{l}\text { Calculates path difference }=12 \text { (cm) } \\ \text { Phase difference } 0,360^{\circ} \text { or } 2 \pi\end{array}$ | $\begin{array}{c}\text { (1) }\end{array}$ |  |
| Or |  |  |  |
| Calculates number of wavelengths in two paths |  |  |  |
| Phase difference $0,360^{\circ}$ or $2 \pi$ |  |  |  |$)$
