	<b>Vork</b> – Morning	Paper Reference 6PH02/01R

#### **Instructions**

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
  - there may be more space than you need.

#### **Information**

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
  - use this as a guide as to how much time to spend on each question.
- Questions labelled with an asterisk (\*) are ones where the quality of your written communication will be assessed
  - you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.
- The list of data, formulae and relationships is printed at the end of this booklet.
- Candidates may use a scientific calculator.

#### **Advice**

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

### **SECTION A**

## Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box  $\boxtimes$ . If you change your mind, put a line through the box  $\boxtimes$  and then mark your new answer with a cross  $\boxtimes$ .

1 Which type of electromagnetic radiation is used for communicating with satellites?

A infrared

**B** microwave

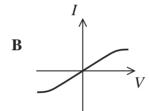

C ultraviolet

**D** visible light

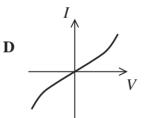

(Total for Question 1 = 1 mark)

2 Which of the following current – potential difference (*I–V*) graphs shows the correct behaviour for a filament bulb?

 $\begin{array}{c} A \\ \hline \end{array}$ 

 $C \longrightarrow_{V}$ 

 $\mathbf{X}$   $\mathbf{A}$ 

 $\mathbf{X}$  **B** 

 $\mathbf{K}$  C

 $\times$  **D** 

(Total for Question 2 = 1 mark)

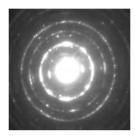

3	A stan	ding wave is created on a string stretched between two supports.	
	Which	n statement is always true?	
	$\mathbf{X}$ A	There is a node at each end.	1
	$\boxtimes$ B	There is a node in the centre.	1
		There is an antinode at each end.	1
	$\boxtimes$ <b>D</b>	There is an antinode in the centre.	1
		(Total for Question 3 = 1 mark)	
4	_	from a lamp passes through two polarising filters, P1 and P2, before reaching a or. The filters initially have their planes of polarisation parallel.	
	The in	ntensity of light at the detector will be greatest if	
	$\boxtimes$ A	P1 is rotated by 45° and P2 is rotated by 315° in the same direction.	1
	$\boxtimes$ B	P1 is rotated by 90° and P2 is rotated by 270° in the same direction.	1
		P1 is rotated by 45° and P2 is rotated by 270° in the same direction.	1
	$\boxtimes$ <b>D</b>	P1 is rotated by 90° and P2 is rotated by 315° in the same direction.	ı
		(Total for Question 4 = 1 mark)	

5 A beam of electrons is directed towards a section of crystalline material.

screen

The following pattern is produced by the electrons on the screen.

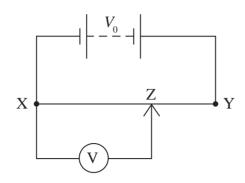

This pattern demonstrates

- **A** diffraction.
- **B** polarisation.
- C reflection.
- **D** refraction.

(Total for Question 5 = 1 mark)

6 The diagram shows a uniform wire XY across which a potential difference  $V_0$  is applied.

Which of the following correctly shows the output potential difference across XZ?

$$\triangle$$
 **A**  $V = \frac{XY}{XZ}V_0$ 

$$\square \mathbf{B} \quad V = \frac{\mathbf{XZ}}{\mathbf{XY}} V_0$$

$$\square$$
 C  $V = \frac{XZ}{ZY}V_0$ 

$$\square$$
 **D**  $V = \frac{ZY}{XY}V_0$ 

(Total for Question 6 = 1 mark)

- 7 When a semiconductor has its temperature increased from room temperature, its resistance usually decreases because
  - A the electrons are moving faster.
  - **■ B** the lattice atoms vibrate with greater amplitude.
  - C the lattice atoms vibrate with smaller amplitude.
  - **D** the number of charge carriers per unit volume increases.

(Total for Question 7 = 1 mark)

- **8** Which of the following is a base SI unit?
  - **A** ampere
  - B coulomb
  - C ohm
  - $\square$  **D** volt

(Total for Question 8 = 1 mark)

- 9 Which term may be defined as the number of waves passing a point in one second?
  - **A** wave speed
  - **B** wavelength
  - C period
  - **D** frequency

(Total for Question 9 = 1 mark)

10 The diagram shows a displacement-distance graph at an instant for two waves, X and Y, travelling to the right.

Displacement

X
Y

Distance

Which of the following statements correctly describes the phase relationship between the two waves?

- **A** X and Y are in antiphase
- **B** X and Y are in phase
- $\square$  C X is  $\pi/2$  radians ahead of Y
- $\square$  **D** Y is  $\pi/2$  radians ahead of X

(Total for Question 10 = 1 mark)

**TOTAL FOR SECTION A = 10 MARKS** 

# **SECTION B**

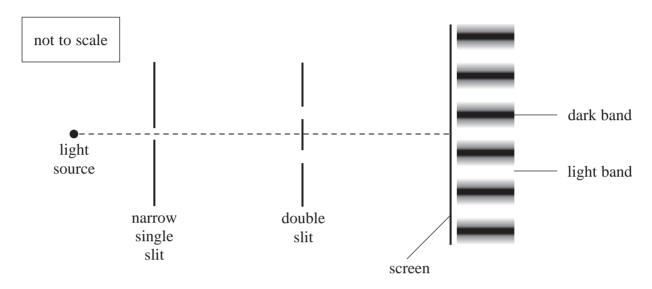

Answer ALL questions in the	e spaces provided.
11 Explain why an ammeter	
• must be placed in series to measure current thr	ough a component
• must have a very low resistance.	
	(3)
	/T + 18 O 4 44 2 1 )
	(Total for Question 11 = 3 marks)
12 When a cell of e.m.f. 1.5 V is connected across a resistant	tance of 6.6 $\Omega$ the current is 0.21 A.
Calculate the internal resistance of the cell.	
	(3)
	Internal resistance =
	(Total for Question 12 = 3 marks)

**13** In the 17th century, Isaac Newton suggested that light was made up of very small particles which he called corpuscles.

Newton's theory was favoured in England throughout the 18th century because of his great reputation although scientists elsewhere applied the wave theory.

In 1801 Thomas Young demonstrated his double slit experiment. Monochromatic light from a narrow single slit was passed through a double slit and a pattern of light and dark bands was seen on a screen, as shown in the diagram.

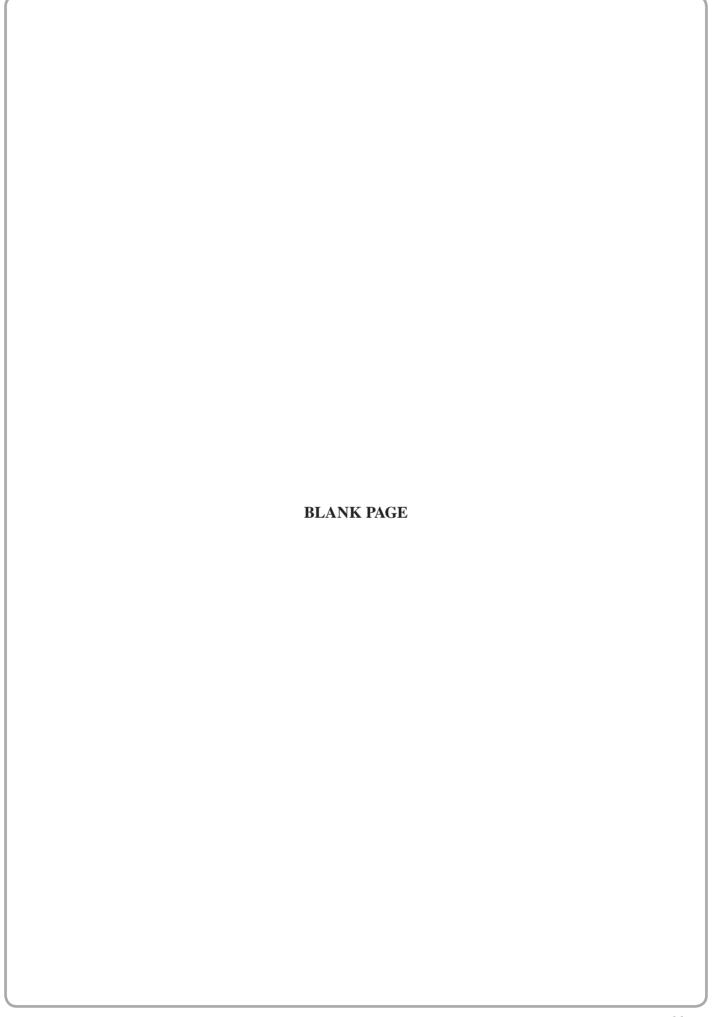

\*(a) Explain how the light and dark bands are formed in the double slit experiment.

(4)

HVNIGIN Why congrence is necessary to on	NEARWA tha light and dark hands	
Explain why coherence is necessary to ob	serve the fight and dark bands.	(2)
Ctata vilas Varia el accionant di anno di	Noveton's community theory

A rechargeable AA cell is labelled 2.0 Ah (ampere hours), 1.2 V.	
(a) Show that Ah is a unit of charge.	(2)
<ul><li>(b) When charging the cell, the current is 0.19 A and the potential difference is 1.5 V for 10 hours.</li><li>Calculate the electrical energy supplied while the cell is being charged.</li></ul>	
	(2)
Electrical energy supplied =	
(c) The maximum charge that can be delivered from a fully charged cell is 7200 C.  Calculate the maximum energy which could be transferred by the cell if the output potential difference remained constant at 1.2 V.	(2)
Maximum energy =	
(d) Calculate the efficiency of the charging process.	(2)
Efficiency =	
	rks)

<ul> <li>Explain what is meant by refraction and why it occurs fo atmosphere.</li> </ul>	r light entering the Earth's
umosphere.	(3)
b) The diagram shows a ray of light from a star reaching the	e Earth's surface.
,	
Earth	
atmosphara	
atmosphere	
met to seele	star
not to scale	

The diagram shows in more detail the ray of light as it enters the atmosphere.

Calculate the change in direction  $\boldsymbol{\theta}$  of the ray.

refractive index of atmosphere = 1.001  $\theta = -4.001$ 

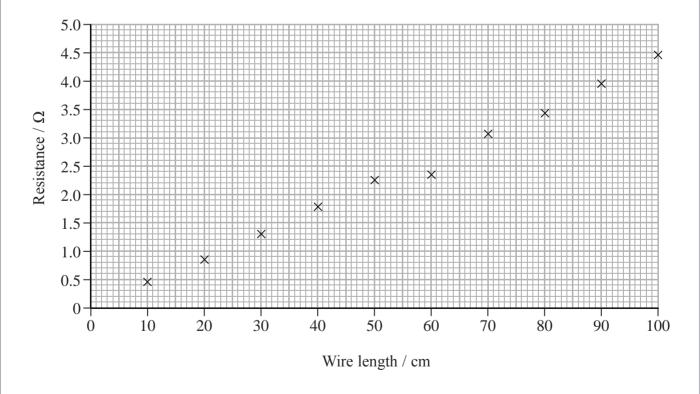

(Total for Question 15 = 7 marks)

**16** A student carried out a series of measurements to determine how the resistance of a wire varies with its length.

The student obtained the following results.

Wire length / cm	Current / A	Potential difference / V	Resistance / Ω
100	0.15	0.67	4.47
90	0.16	0.63	3.94
80	0.17	0.58	3.41
70	0.17	0.52	3.06
60	0.18	0.42	2.33
50	0.18	0.40	2.22
40	0.19	0.34	1.79
30	0.20	0.26	1.30
20	0.22	0.18	0.82
10	0.22	0.10	0.45

The student plotted the results on a graph.

a) Calculate the resistivity of the wire used. cross-sectional area of wire = $1.06 \times 10^{-7}$ m <sup>2</sup>	
cross-sectional area of wife = 1.00 × 10 III	(4)
Resistivity =	
b) One precaution taken by the student was to keep the current small.	
Explain why this precaution was necessary.	
	(2)
Explain <b>one</b> other precaution which should be taken by the student to ensure the accuracy of the results in the table.	
decaracy of the results in the table.	(2)

(5)

19 Phototubes are devices which make use of the photoelectric effect to detect light above a specific frequency.

microammeter

- (a) Explain why
  - no current flows when the phototube is in darkness
  - current flows in the circuit when the phototube is illuminated by light above a specific frequency.

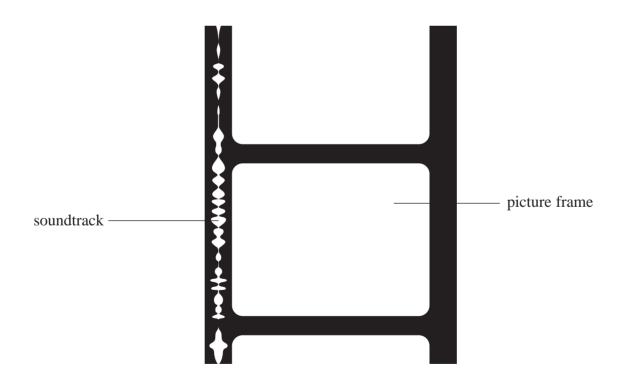

(b)	Make an appropriate	calculation to	explain	why	caesium	is	used	as	the	cathode	e for
	visible light but zinc	is not.									

work function of zinc = 3.63 eV

work function of caesium = 2.14 eV

(4)

(c) Before digital technology was used, the films used at the cinema had an optical soundtrack next to the picture frames.

The film, including the soundtrack as shown, moves through a projector past a source of light. Light is detected by a phototube on the other side of the soundtrack. The changing current produced by the phototube circuit is converted to a sound signal with the same variation in amplitude and frequency as the original sound.

(i) State what is meant by amplitude.	(1)
(ii) Explain how the changing pattern of the soundtrack p in the phototube circuit.	produces a changing current (3)

## List of data, formulae and relationships

Acceleration of free fall  $g = 9.81 \text{ m s}^{-2}$  (close to Earth's surface)

Electron charge  $e = -1.60 \times 10^{-19} \text{C}$ 

Electron mass  $m_{\rm e} = 9.11 \times 10^{-31} \, \rm kg$ 

Electronvolt  $1 \text{ eV} = 1.60 \times 10^{-19} \text{J}$ 

Gravitational field strength  $g = 9.81 \text{ N kg}^{-1}$  (close to Earth's surface)

Planck constant  $h = 6.63 \times 10^{-34} \, \mathrm{J \, s}$ Speed of light in a vacuum  $c = 3.00 \times 10^8 \, \mathrm{m \, s^{-1}}$ 

## Unit 1

# Mechanics

Kinematic equations of motion v = u + at

 $s = ut + \frac{1}{2}at^2$  $v^2 = u^2 + 2as$ 

Forces  $\Sigma F = ma$ 

g = F/mW = mg

Work and energy  $\Delta W = F \Delta s$ 

$$\begin{split} E_{\rm k} &= \frac{1}{2} m v^2 \\ \Delta E_{\rm grav} &= m g \Delta h \end{split}$$

### Materials

Stokes' law  $F = 6\pi \eta r v$ 

Hooke's law  $F = k\Delta x$ 

Density  $\rho = m/V$ 

Pressure p = F/A

Young modulus  $E = \sigma/\varepsilon$  where

Stress  $\sigma = F/A$ Strain  $\varepsilon = \Delta x/x$ 

Elastic strain energy  $E_{el} = \frac{1}{2}F\Delta x$ 

### Unit 2

Waves

Wave speed  $v = f\lambda$ 

Refractive index  $\mu_2 = \sin i / \sin r = v_1 / v_2$ 

**Electricity** 

Potential difference V = W/Q

Resistance R = V/I

Electrical power, energy and P = VI efficiency  $P = I^2R$ 

 $P = I^{2}R$   $P = V^{2}/R$  W = VIt

% efficiency =  $\frac{\text{useful energy output}}{\text{total energy input}} \times 100$ 

% efficiency =  $\frac{\text{useful power output}}{\text{total power input}} \times 100$ 

Resistivity  $R = \rho l/A$ 

Current  $I = \Delta Q/\Delta t$ 

I = nqvA

Resistors in series  $R = R_1 + R_2 + R_3$ 

Resistors in parallel  $\frac{1}{R} = \frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3}$ 

Quantum physics

Photon model E = hf

Einstein's photoelectric  $hf = \phi + \frac{1}{2}mv_{\text{max}}^2$
