Physics Advanced Subsidiary Paper 1: Core Physics I									
Tuesday 24 May 2016 – Mo Time: 1 hour 30 minutes	rning	Paper Reference 8PH0/01							
You may need a ruler.		Total Marks							

## **Instructions**

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions in Sections A and B.
- Answer the questions in the spaces provided
   there may be more space than you need.

## Information

- The total mark for this paper is 80.
- The marks for each question are shown in brackets
   use this as a guide as to how much time to spend on each question.
- You may use a scientific calculator.
- In questions marked with an asterisk (\*), marks will be awarded for your ability
  to structure your answer logically, showing how the points that you make are
  related or how they follow on from each other where appropriate.

#### Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.
- You are advised to show your working in calculations including units where appropriate.

## **SECTION A**

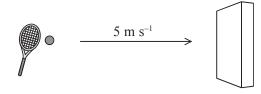

### Answer ALL questions.

All multiple choice questions must be answered with a cross  $\boxtimes$  in the box for the correct answer from A to D. If you change your mind about an answer, put a line through the box  $\boxtimes$  and then mark your new answer with a cross  $\boxtimes$ .

- 1 The winner of a 400m race must have the greatest
  - A acceleration.
  - **B** average speed.
  - C instantaneous speed.
  - **D** maximum speed.

(Total for Question 1 = 1 mark)

2 A tennis ball of mass 0.06kg moves towards a wall at a velocity of 5 m s<sup>-1</sup> as shown.

The tennis ball hits the wall perpendicularly and rebounds at the same speed.

What is the change in momentum of the ball?

- $\triangle$  A 0.60kg m s<sup>-1</sup>
- **B**  $0.30 \text{kg m s}^{-1}$
- $\bigcirc$  **C** -0.30kg m s<sup>-1</sup>
- $\square$  **D** -0.60kg m s<sup>-1</sup>

3 A student set up the circuit below and moved a sliding contact along a uniform conducting wire.

The student recorded the potential difference V across each length of wire l under test.

Which graph correctly shows how V varies with 1?

(Total for Question 3 = 1 mark)

- 4 Which of the following correctly defines electromotive force?
  - $\ \square$  A Force per unit charge to move a charge across a component.
  - ☑ B Force per unit charge to move a charge around a circuit.
  - ☑ C Work done per unit charge to move a charge across a component.
  - D Work done per unit charge to move a charge around a circuit.

- 5 Which of the following is the unit for tension expressed in SI base units?
  - $\square$  A N
  - **B** Ns
  - C kg m s<sup>-1</sup>
  - $\square$  **D** kg m s<sup>-2</sup>

(Total for Question 5 = 1 mark)

**6** The graphs shown represent the displacement-time and velocity-time graphs for the horizontal component of the motion of a ball.

Which of the following situations could produce this motion of the ball?

- A Rolling down one ramp and then rolling up a second ramp.
- **B** Rolling down a ramp then along the floor.
- C Rolling up one ramp and down a second ramp.
- **D** Rolling up a ramp and rolling back down the same ramp.

(Total for Question 6 = 1 mark)

(c) One region of Australia decided to trial the removal of the speed limit on some roads.

The following statements were made in an online forum discussing this issue.

## Comment

"If a car was going faster, it would have better fuel economy. A lot of modern cars have engines that are more efficient at  $200 \,\mathrm{km} \,h^{-1}$  than at  $100 \,\mathrm{km} \,h^{-1}$ ."

## Reply

"You confuse efficiency with fuel consumption. You cannot get better fuel economy at higher speeds."

Justify the statement in the reply.

## **SECTION B**

# Answer ALL questions.

15 A student carried out an experiment to identify a fluid from its viscosity at room temperature.

A ball bearing of diameter d was released at the top of a container containing the fluid. The motion of the ball bearing was recorded using a video camera and hence the terminal velocity v of the ball bearing was determined.

This was repeated for ball bearings of increasing diameter with the fluid at a constant temperature.

(a) To determine the viscosity  $\eta$ , the student used the equation  $v = \frac{d^2g(\rho_b - \rho_f)}{18\eta}$ 

where  $\rho_b$  = density of the material of the ball bearing  $\rho_f$  = density of the fluid.

Explain why a graph of v on the y-axis and  $d^2$  on the x-axis should be a straight line through the origin.

(3)

(b) The student obtained the following data.

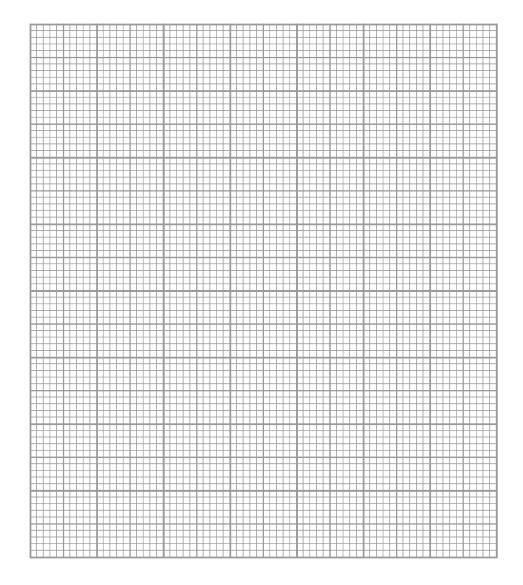

d / 10 <sup>-3</sup> m	$d^2 / 10^{-6} \text{ m}^2$	$v / 10^{-3} \mathrm{m \ s^{-1}}$
1.0	1.0	2.3
2.0	4.0	11
3.0	9.0	23
4.0	16.0	39
5.0	25.0	64
