PAPER 1: Core Physics I

You must have:

Scientific calculator, ruler, protractor

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Sections A and B.
- Answer the questions in the spaces provided
 - *there may be more space than you need.*

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
 - *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk (*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- You are advised to show your working in calculations including units where appropriate.

Q1/1/1/e2/1

P 6 9 4 4 0 R A 0 1 3 2

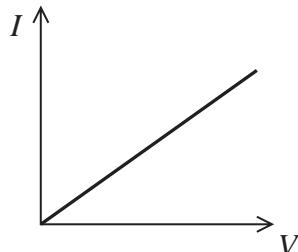

Pearson

SECTION A

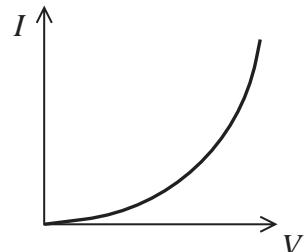

Answer ALL questions.

All multiple choice questions must be answered with a cross in the box \boxtimes for the correct answer from A to D. If you change your mind about an answer, put a line through the box \boxtimes and then mark your new answer with a cross \boxtimes .

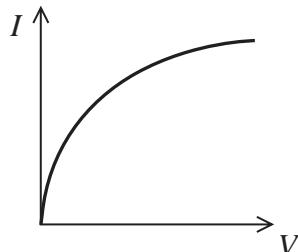

- 1 Which of the following graphs shows how the current I through a thermistor varies with the potential difference V across the thermistor?

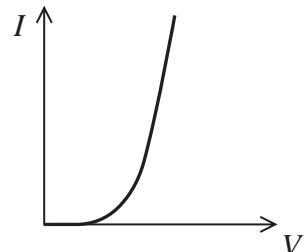

A

B

C

D

- A
- B
- C
- D

(Total for Question 1 = 1 mark)

DO NOT WRITE IN THIS AREA

- 2 Which of the following is the SI base unit for resistance?

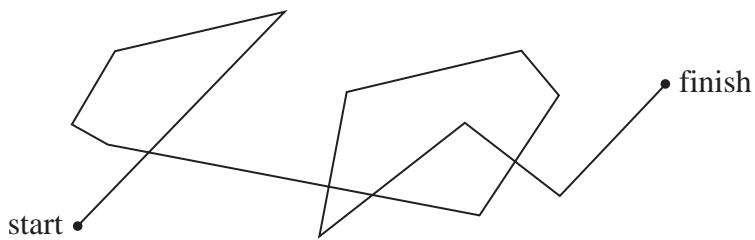

- A Ω
- B VA^{-1}
- C $\text{kg m}^2 \text{s}^{-3} \text{A}^{-2}$
- D $\text{kg m}^2 \text{s}^{-1} \text{C}^{-2}$

(Total for Question 2 = 1 mark)

- 3 The diagram shows the path of a pollen particle on the surface of water as it is hit by water molecules.

Scale

1 cm : 0.5 mm

Which of the following is the magnitude of the displacement of the pollen particle in mm?

- A 260
- B 80
- C 13
- D 4

(Total for Question 3 = 1 mark)

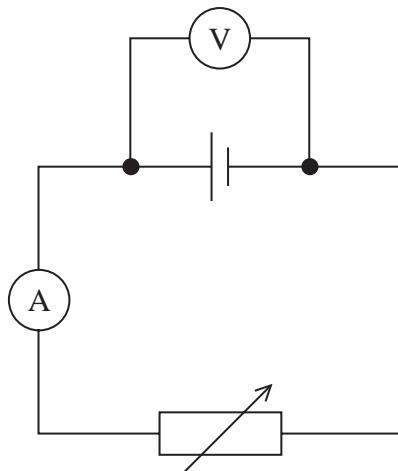

- 4 A conductor has a resistance R . A constant potential difference is applied across the conductor. The drift velocity of the charge carriers in the conductor is v .

Which of the following is the relationship between R and v ?

- A $v \propto R$
- B $v \propto \sqrt{R}$
- C $v \propto \frac{1}{R}$
- D $v \propto \frac{1}{\sqrt{R}}$

(Total for Question 4 = 1 mark)

- 5 A variable resistor is connected in a circuit as shown. The cell has internal resistance.

The resistance of the variable resistor is increased.

Which row of the table is correct?

	Ammeter reading	Voltmeter reading
<input checked="" type="checkbox"/> A	increases	increases
<input checked="" type="checkbox"/> B	increases	decreases
<input checked="" type="checkbox"/> C	decreases	increases
<input checked="" type="checkbox"/> D	decreases	decreases

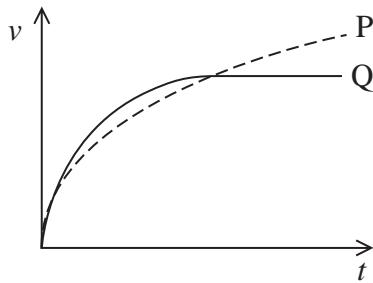

(Total for Question 5 = 1 mark)

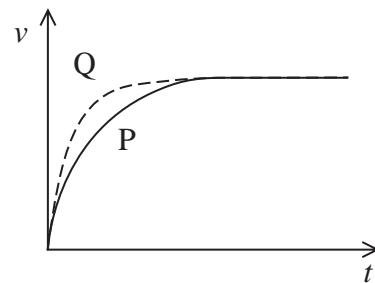

- 6 Two identical lorries, P and Q, carry different loads inside them so that the total mass of P is greater than the total mass of Q.

P and Q start from rest along the same road. The forward force from the engine of each lorry is the same.

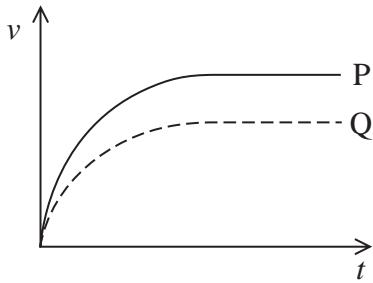

Which of the following graphs correctly shows how velocity v varies with time t for the two lorries?

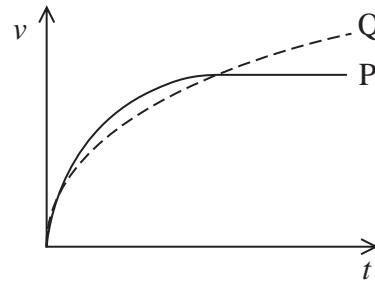

A

B

C

D

- A
- B
- C
- D

(Total for Question 6 = 1 mark)

- 7 A cable is used to pull a mass of 2.5 kg vertically upwards with an acceleration of 4.3 m s^{-2} .

Which of the following expressions gives the tension in the cable in N?

- A 2.5×4.3
- B $(2.5 \times 4.3) - (2.5 \times 9.81)$
- C $(2.5 \times 4.3) + (2.5 \times 9.81)$
- D 2.5×9.81

(Total for Question 7 = 1 mark)

- 8 A power station provides electrical power at a mean rate of 3500 MW.

Which of the following gives the best estimate of the energy provided to consumers over a period of a year?

$$1 \text{ year} = 3.2 \times 10^7 \text{ s}$$

- A $1 \times 10^6 \text{ J}$
- B $1 \times 10^{11} \text{ J}$
- C $1 \times 10^{13} \text{ J}$
- D $1 \times 10^{17} \text{ J}$

P 6 9 4 4 0 R A 0 1 1 3 2

- 12 A boat crosses a river, to a point on the bank directly opposite the starting point as shown. The velocity of the water in the river is 2.4 m s^{-1} .

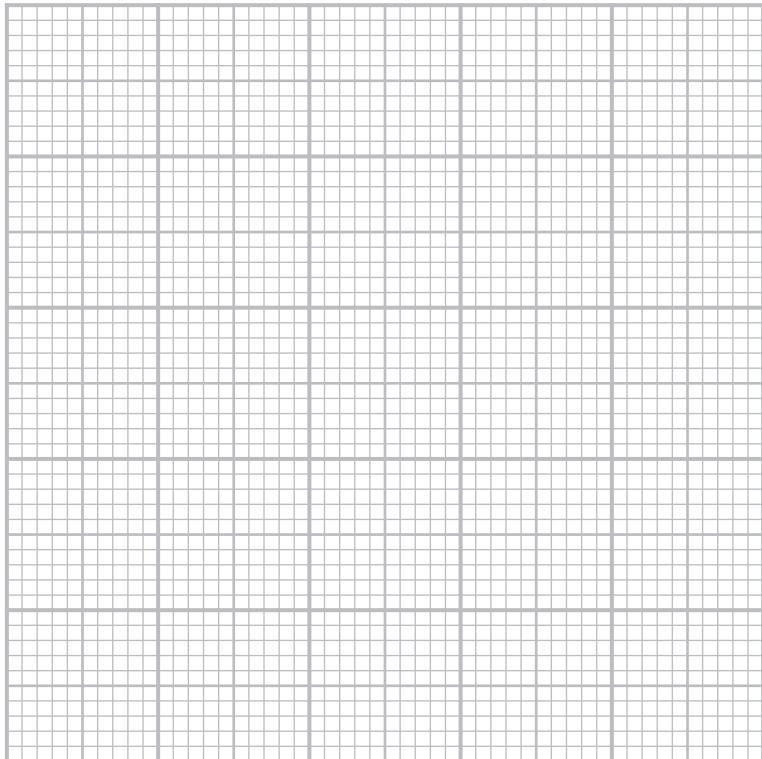

- (a) The boat is steered at an angle θ to the velocity of the water in the river in order to travel in a straight line across to the finish point.

The speed of the boat relative to the water is 4.3 m s^{-1} .

Determine the value of θ by drawing a scaled vector diagram.

(3)

$$\theta = \dots$$

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- (b) The boat repeats the crossing, at the same speed, when the velocity of the water in the river is greater.

Explain how the time taken for the crossing will change.

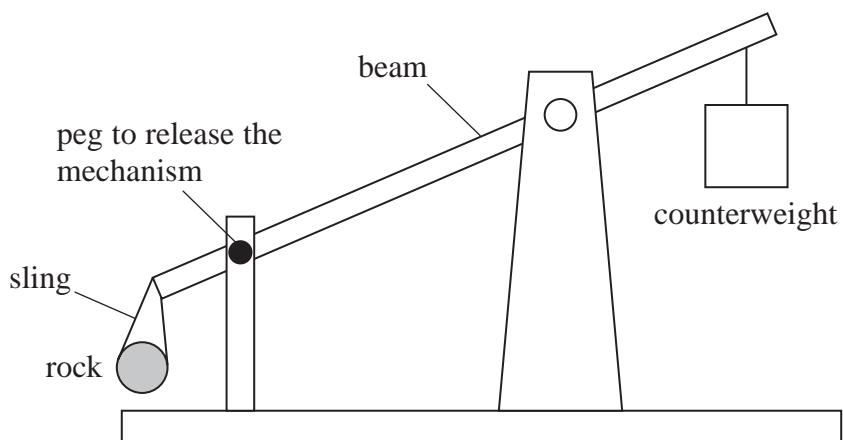

(3)

P 6 9 4 4 0 R A 0 1 3 3 2

- 13 A trebuchet is a medieval catapult designed to project a rock over large distances. A simplified diagram of a trebuchet is shown.

The rock is held in a sling. When the peg is removed the counterweight falls and the rock is projected through the air.

- (a) A student assumes that all the gravitational potential energy transferred from the counterweight is transferred to the kinetic energy of the rock.

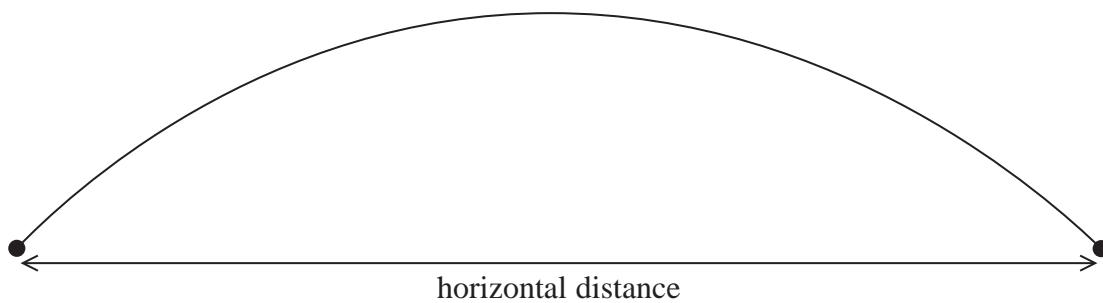

Give two reasons why this is not correct.

(2)

DO NOT WRITE IN THIS AREA

- (b) The rock was projected with a velocity of 41.5 m s^{-1} at an angle of 30° to the horizontal. The diagram shows the flight of the rock after it has left the trebuchet.

The rock rises to a maximum height and then falls back to the same height as its release height.

Calculate the horizontal distance travelled by the rock in this time.

(4)

Horizontal distance =

P 6 9 4 4 0 R A 0 1 5 3 2

DO NOT WRITE IN THIS AREA

- (b) The digital voltmeter is replaced with an analogue voltmeter with much less resistance.

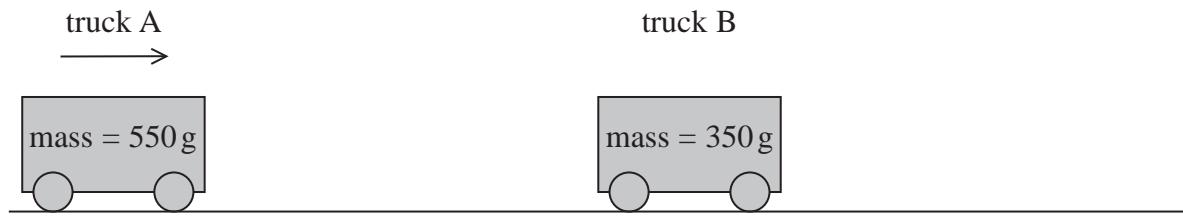

Deduce how this will affect the efficiency of the motor circuit.

(4)

P 6 9 4 4 0 R A 0 1 9 3 2

- (c) The string pulling the truck was cut. The truck (A) travelled down the slope onto a horizontal surface and collided with a second truck (B), which was stationary, as shown.

The velocity of truck A just before the collision was 5.4 m s^{-1} and just after the collision was 2.1 m s^{-1} .

Determine the velocity of truck B after the collision.

(3)

.....
.....
.....
.....
.....

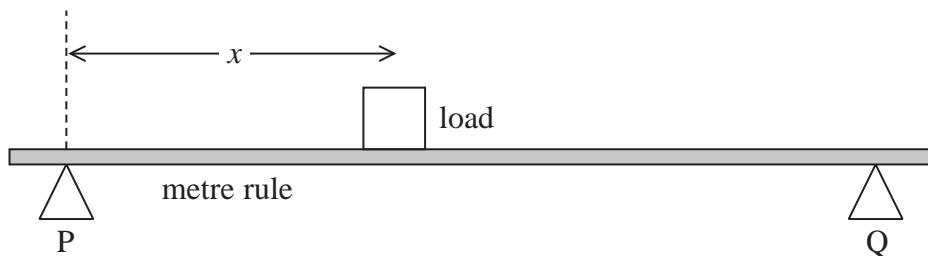

Velocity of truck B =

(Total for Question 15 = 11 marks)

- 16** A student investigated how the supporting forces on a bridge vary as traffic moves across the bridge.

The student made a simple model of a bridge using a metre rule. The metre rule rested on two supports, P and Q, as shown.

The upward force on the metre rule at P was F_p . The upward force on the metre rule at Q was F_q .

A load was placed on the metre rule a distance x from support P. Forces F_p and F_q were measured for different values of x .

Explain how F_p and F_q changed as x was increased.

SECTION B**Answer ALL questions in the spaces provided.**

- 17 The diagram shows a wooden metre rule which is clamped horizontally to a bench. The other end of the rule is loaded with a weight W . The length l of the metre rule between the clamp and W can be varied. The loaded end of the rule is displaced through a vertical distance d as shown.

A student investigated how d varied with l .

- (a) Describe how the student should use set squares and a second metre rule to determine d . You may add to the diagram.

(2)

P 6 9 4 4 0 R A 0 2 3 3 2

- (b) The student used the following equation for the relationship between the deflection d and the length l .

$$d = \frac{4Wl^3}{Ebt^3}$$

E is the Young modulus of the wood, b is the width of the rule and t is the thickness of the rule.

- (i) The student measured t several times and calculated its mean value \bar{t} .

t / mm				\bar{t} / mm
6.25	6.27	6.29	6.24	6.26

Calculate the percentage uncertainty in the thickness of the rule.

(2)

.....
.....
.....
.....
.....

Percentage uncertainty =

- (ii) The student's results are shown in the table.

l / m	d / mm	
0.300	6	
0.400	18	
0.500	39	
0.600	68	
0.700	107	
0.800	166	

Plot a graph of d on the y -axis against l^3 on the x -axis on the grid opposite.
Use the additional column of the table for your processed data.

18 A student was given a block of conducting putty of mass 43 g.

(a) (i) Show that the volume of the block of conducting putty was about $8 \times 10^{-6} \text{ m}^3$.

$$\text{density of conducting putty} = 5300 \text{ kg m}^{-3}$$

(2)

- (ii) The student formed the putty into a cylinder. Coins were pushed onto the ends of the cylinder as shown. The coins each had a crocodile clip attached and an ohmmeter was connected across the putty.

Determine the resistance of the cylinder of putty.

$$\text{diameter of cylinder} = 12 \text{ mm}$$

$$\text{resistivity of conducting putty} = 4.0 \times 10^{-3} \Omega \text{ m}$$

(3)

Resistance =

DO NOT WRITE IN THIS AREA

(b) The student then made a cylinder that had a larger resistance.

Explain how the student used the putty to make a larger resistance.
