Unit H556/01: Modelling physics
Advanced GCE

Mark Scheme for June 2017

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Annotations available in RM Assessor

| Annotation | Meaning |
| :---: | :---: |
| BOD | Benefit of doubt given |
| CON | Contradiction |
| $*$ | Incorrect response |
| ECF | Error carried forward |
| L1 | Level 1 |
| L2 | Level 2 |
| L3 | Level 3 |
| TE | Transcription error |
| NBOD | Benefit of doubt not given |
| POT | Power of 10 error |
| $\wedge$ | Omission mark |
| SF | Error in number of significant figures |
| $\checkmark$ | Correct response |
| $2$ | Wrong physics or equation |

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

| Annotation | Meaning |
| :---: | :--- |
| $\boldsymbol{l}$ | alternative and acceptable answers for the same marking point |
| reject | Answers which are not worthy of credit |
| not | Answers which are not worthy of credit |
| ignore | Statements which are irrelevant |
| allow | Answers that can be accepted |
| () | Underlined words must be present in answer to score a mark |
| ECF | Error carried forward |
| AW | Or reverse argument |
| ORA |  |

## MARKING INSTRUCTIONS

## Generic version as supplied by OCR Sciences

## CATEGORISATION OF MARKS

The marking schemes categorise marks on the MACB scheme.

B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

M marks: These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks: These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the C-mark is given.

A marks: These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

## Note about significant figures:

If the data given in a question is to 2 sf, then allow to 2 or more significant figures.
If an answer is given to fewer than 2 sf, then penalise once only in the entire paper.
Any exception to this rule will be mentioned in the Additional Guidance.

| Question | Answer | Marks |  |
| :---: | :--- | :---: | :---: |
| 1 | B | 1 |  |
| 2 | B | 1 |  |
| 3 | C | 1 |  |
| 4 | A | 1 |  |
| 5 | C | 1 |  |
| 6 | B | 1 |  |
| 7 | B | 1 |  |
| 8 | D | 1 |  |
| 9 | C | 1 |  |
| 10 | B | 1 |  |
| 11 | A | 1 |  |
| 12 | B | 1 |  |
| 13 | A | 1 |  |
| 14 | C | 1 |  |
| 15 | C | 1 |  |
|  |  | 15 |  |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 16 | (a) | $\begin{aligned} & \text { work done }=400 \times 0.80 \\ & \text { work done }=320(\mathrm{~J}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ |  |
|  | (b) | ```ratio of speeds = ratio of distances (since same time) or ratio = 80 / 2 ratio = 40``` | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Allow 40:1 <br> Allow 2 marks for ratio 29.4 (assuming p same) <br> Not 1:40 for A1 |
|  | (c) | $\begin{aligned} & \text { work done }=1200 \times 9.81 \times 0.02(=235.4) \\ & \text { efficiency }=235.4 / 320 \times 100 \\ & \text { efficiency }=74 \% \end{aligned}$ | C1 <br> A1 | Note: Using $g=10 \mathrm{~N} \mathrm{~kg}^{-1}$ gives 75\%: allow 1 mark max <br> Possible ECF from (a) <br> Note: 0.74 scores 1 mark <br> Allow 2 marks for using 235/320 $\times 100=73 \%$ <br> Allow use of $9.8 \mathrm{~N} \mathrm{~kg}^{-1}$ gives $73.5 \%$ for 2 marks <br> Allow 1 mark for $71 \%$, force $=(1200 g-400) \mathrm{N}$ used <br> Allow 1 mark for $76 \%$, force $=(1200 g+400) \mathrm{N}$ used |
|  |  | Total | 6 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 17 | (a) |  | Use a thermometer (with $\pm 1^{\circ} \mathrm{C}$ ) <br> Stir water bath / avoid parallax (for glass thermometer) | B1 <br> B1 | Allow 'temperature sensor/gauge' <br> Allow 'avoid touching sides of water bath with thermometer' <br> Allow 'take temperature in several places/times and average' <br> Allow idea of 'leave thermometer for long time (to reach thermal equilibrium)' <br> Not idea of 'use thermometer with finer resolution' |
|  | (b) | (i) | Smaller (spacing between) divisions / increments (AW) | B1 | Ignore any reference to accuracy or precision <br> Allow 'less uncertainty' <br> Allow better or smaller or greater or higher resolution |
|  |  | (ii) | $\begin{aligned} & p=37.0 \times 4.448 /\left(1000 \times 0.0254^{2}\right) \\ & 255(\mathrm{kPa}) \\ & \text { uncertainty }=3(\mathrm{kPa}) \end{aligned}$ | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | Allow clearly identified correct answer in table or in working area. <br> Must be 3sf <br> Must be 1sf <br> Allow $255.1 \pm 3.4$ scores mark 1 |
|  | (c) | (i) | Point plotted at (44, 255) | B1 | ECF from (b)(ii) <br> Plot to with $\pm$ half a small square Ignore checking error bars |

(ii)*

## Level 3 (5-6 marks)

Clear explanation, description and determination
There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.

## Level 2 (3-4 marks)

Some explanation, description and determination
Or
Some explanation and clear determination
There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence.

## Level 1 (1-2 marks)

Limited explanation or description or determination
The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.

## 0 marks

No response or no response worthy of credit.

B1×6 Indicative scientific points may include:

## Explanation and Description

- Absolute zero is the minimum possible temperature / at absolute zero KE is zero
- At absolute zero $p$ is zero
- At absolute zero, the internal energy is minimum (allow 0)
- Absolute zero should be (about) $-273^{\circ} \mathrm{C}$
- Reference to $p \mathrm{~V}=n R T$ or $p V=N k T$ or $p \propto T$
- A graph of $p$ against $\theta$ is a straight line / straight line drawn on graph
- Intercept of straight line with $x$ - axis or $\theta$-axis is absolute zero calculated by using $\mathrm{y}=\mathrm{mx}+\mathrm{c}$

## Determination

- Gradient in the range 0.7 to $0.9\left(\mathrm{kPa} \mathrm{K}^{-1}\right)$
- $y=m x+c$ used to determine the intercept $c$ or absolute zero
- Absolute zero in the range $-320^{\circ} \underline{\mathrm{C}}$ to $-240^{\circ} \underline{\mathrm{C}}$

Use only L1, L2 and L3 in RM Assessor.

| (d) | Draw the worst fit line (through all the error bars) (AW). <br> Determine the new value for absolute zero and find the difference between the value in (c)(ii) and this new intercept. (AW) | $\begin{aligned} & \mathrm{B} 1 \\ & \mathrm{~B} 1 \end{aligned}$ |  |
| :---: | :---: | :---: | :---: |
| (e) | Cooling gas value of absolute zero is lower than (c)(ii) <br> (Whilst cooling, the) temperature of gas lags behind the temperature of water (AW, ORA) <br> Graph is shifted to the left <br> Stir water / wait for temperatures to be the same / attempt at measuring temperature of gas directly (AW) | B1 B1 B1 B1 B1 | Allow: gradient is too shallow <br> Allow: $p$ measured is higher than expected for incorrect measurement of $T$ (so affects the graph) (AW, ORA) <br> Not insulation of water bath Not heat losses |
|  | Total | 18 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 18 | (a) | (i) | $\begin{aligned} & \text { volume }=7.0 \times 10^{-2} \times \pi \times\left(0.5 \times 10^{-2}\right)^{2} \text { or } 5.5 \times 10^{-6}\left(\mathrm{~m}^{3}\right) \\ & \rho=5.0 \times 10^{-3} /\left(7.0 \times 10^{-2} \times \pi \times\left(0.5 \times 10^{-2}\right)^{2}\right) \\ & \text { density }=910\left(\mathrm{~kg} \mathrm{~m}^{-3}\right) \end{aligned}$ | C1 A1 | No ecf for incorrect volume. <br> Answer to 3 s.f. is 909 <br> Allow 1 mark for $230\left(r=1.0 \times 10^{-2} \mathrm{~m}\right.$ used $)$ |
|  |  | (ii) | The density (of wood is) similar to human (AW) <br> Less than density of water / it needs to float / otherwise it will sink | $\begin{aligned} & \mathrm{B} 1 \\ & \mathrm{~B} 1 \end{aligned}$ | Allow 'greater upthrust than weight when fully submerged' |
|  | (b) |  | $\begin{aligned} & \left(v^{2}=2 \text { as }+u^{2}\right) ; v=(2 \times 9.81 \times 0.30)^{1 / 2} \\ & \text { speed }=2.4\left(\mathrm{~m} \mathrm{~s}^{-1}\right) \end{aligned}$ <br> (Allow any subject) | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Allow ( $\mathrm{s}=1 / 2 \mathrm{at} \mathrm{t}^{2}$ ) to give $\mathrm{t}=0.247$ and ( $\mathrm{v}=\mathrm{at}$ ) gives 2.42 |
|  | (c) | (i) | weight $/ \mathrm{W} / \mathrm{mg}$ and downward arrow <br> upthrust $/ U$ and upward arrow <br> drag / $D /$ friction and upward arrow | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \end{aligned}$ | Allow labels used in (c)(i) throughout Ignore arrow sizes. <br> Allow '(water) resistance' for drag |
|  |  | (ii) | Resultant force decreases (with time or as cylinder descends) <br> Upthrust remains constant / drag decreases (as speed decreases) / resultant force is upwards / At lowest point, drag is zero <br> At lowest point, resultant force is upwards | B1 <br> B1 <br> B1 | Allow 'At lowest point, upthrust > weight' <br> Note: Any incorrect answer from the list will not score this point <br> Not 'resultant force $=0$ ' <br> Note: Resultant force is always upwards' scores B1x2 |
|  | (d) |  | Doubling the depth is too much / d is not (directly) proportional to $h$ <br> Qualifying statement using evidence from graph e.g. decreasing gradient, use of numbers to show not proportional, comment about non-zero intercept etc |  |  |
|  |  |  | Total | 14 |  |

| Question |  | Answer | Marks | Guidance |  |
| :--- | :--- | :--- | :--- | :---: | :---: |
| (a) | (i) | $\omega^{2}=g / L$ <br> $\omega=\frac{2 \pi}{T}$ <br> Correct substitution $\frac{4 \pi^{2}}{T^{2}}=\frac{g}{L}$ and rearranging to give <br> correct expression | M1 | A1 | Note: Both M1 marks are required to score this A1 mark |
|  | (ii)Transfer of energy to air / retort stand (because of air <br> resistance / friction) <br> No effect on $T$ (as $T$ is independent of amplitude in SHM <br> for small amplitude oscillations of pendulum) | B1 | Allow 'loss of energy from pendulum (due to friction)' <br> Allow 'work done' for 'energy' |  |  |
| Allow 'isochronous' |  |  |  |  |  |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| (b)* |  | Level 3 (5-6 marks) <br> Clear description including steps to obtain high quality data and analysis <br> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated. <br> Level 2 (3-4 marks) <br> Clear description and some analysis <br> There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence. <br> Level 1 (1-2 marks) <br> Limited description and analysis Or limited description <br> The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear. <br> 0 marks <br> No response or no response worthy of credit. | B1 $\times 6$ | Indicative scientific points may include: <br> Experiment <br> Description <br> - Pendulum string clamped / fixed (can be shown on diagram) <br> - Use a stopwatch to determine time period $T$ <br> - Time multiple oscillations to determine $T$ <br> - Use a ruler to measure $L$ <br> - Vary length $L$ and determine $T$ <br> Quality of Data <br> - Method used to ensure small oscillations <br> - Small angles i.e. < 10 degrees <br> - Idea of fiducial mark <br> - Start/stop timing at the centre of the oscillation <br> - Measure from the fixed point to the centre of the bob <br> Analysis <br> - Correct plotting of graph, e.g. $T^{2}$ against $L$ or $T$ against $\sqrt{ } L$ or $\lg T$ against $\lg L$ <br> - Analysis of data table showing $\mathrm{T}^{2} / \mathrm{L}=$ constant |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | - Expect a straight line through the origin <br> - Correct gradient of the line e.g. $4 \pi^{2} / g$ <br> Use only L1, L2 and L3 in RM Assessor. |
| (c) | (i) | Correct substitution of $T=2(.0 \mathrm{~s})$ into $T^{2}=\frac{4 \pi^{2}}{g} L$ length $=0.99(\mathrm{~m})$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Note: $1(\mathrm{~m})$ here cannot score this A1 mark |
|  | (ii) | Lower $g$ / gravitational field strength / acceleration (of free fall) on Moon. <br> $T$ is longer (on Moon) and justified by $T^{2}=\frac{4 \pi^{2}}{g} L$ or $T^{2} \propto 1 / g$ or $\frac{4 \pi^{x}}{g}$ is larger | B1 B1 | Accept ' g is a sixth of g on Earth' AW Not gravity (is less) |
|  |  | Total | 15 |  |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 20 | (a) | $\begin{aligned} & \text { power } \times \text { time }=2200 \times 4.0 \times 60 \\ & \text { energy }=5.3 \times 10^{5}(\mathrm{~J}) \end{aligned}$ | $\begin{aligned} & \hline \text { C1 } \\ & \text { A1 } \end{aligned}$ | Note: Answer to 3 s.f. is $5.28 \times 10^{5}(\mathrm{~J})$ |
|  | (b) | ```Energy used to heat water to \(100^{\circ} \mathrm{C}=0.60 \times 4200 \times 80(=\) 201.6 kJ) Energy remaining to vaporise water \(=528(\mathrm{~kJ})-201.6(\mathrm{~kJ})\) (= 326.4 (kJ) mass vaporised \(=326.4 \times 10^{3} / 2.3 \times 10^{6}=0.1419(\mathrm{~kg})\) mass of water left \(=0.60-0.1419\) mass of water left \(=0.46(\mathrm{~kg})\)``` | C1 <br> C1 <br> C1 <br> A1 | Possible ecf from (a) |
|  |  | Total | 6 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 21 | (a) | (i) | electron bound to nucleus / represents energy electron must gain to leave the atom / total energy of electron in atom is less than that of a free electron | B1 | Allow ionisation level defined as zero as AW for 'represents electron must gain energy to leave atom / move up energy level' Allow potentials for attractive forces are negative. |
|  |  | (ii)1 | energy $=2.55(\mathrm{eV})$ | B1 | Ignore sign |
|  |  | (ii)2 | $\begin{aligned} & \text { energy }=2.55 \times 1.60 \times 10^{-19}(\mathrm{~J}) \\ & \lambda=\frac{6.63 \times 10^{-88} \times 3.0 \times 10^{8}}{2.55 \times 1.60 \times 10^{-19}} \quad \text { (Allow any subject) } \\ & \text { wavelength }=4.9 \times 10^{-7}(\mathrm{~m}) \\ & \text { wavelength }=490(\mathrm{~nm}) \end{aligned}$ | C1 <br> C1 <br> A1 | Possible ECF from (ii)1 <br> Note: wavelength $=488(\mathrm{~nm})$ to 3 sf |
|  | (b) | (i) | Electron(s) makes a transition to a lower (energy) level / loses energy and emitting a photon(s) / EM radiation | B1 |  |
|  |  | (ii) | Reduce grating separation / increase distance between grating and screen | B1 | Allow 'use finer grating' or 'use grating with more lines $\mathrm{mm}^{-1}$, <br> Not 'smaller slit size' |
|  |  | (iii) | $\begin{aligned} & \text { wavelength }(\text { of peak })=661.5 \mathrm{~nm} \\ & v=3.0 \times 10^{8} \times(661.5-656.3) / 656.3 \\ & \text { recession velocity }=2.4 \times 10^{6}\left(\mathrm{~m} \mathrm{~s}^{-1}\right) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Allow: between 661 and 662 nm <br> Note: check divided by 656.3 nm <br> Range of acceptable answers. 2.1(5)-2.6(1) x $10^{6}$ |
|  |  | (iv) | (Relative) abundance of hydrogen (AW) | B1 | Allow 'Hydrogen commonly found in stars' (AW) |
|  | (c) |  | Less intense <br> Galaxy is moving faster and therefore greater / longer wavelength (AW) <br> Periodic shift in wavelength (if plane of orbit is in line of sight) (ORA) | B1 <br> B1 <br> B1 | Allow 'greater red shift' / 'greater Doppler shift' / 'to the right' for longer wavelength <br> Allow argument referring to splitting of line because of relative velocities of two component stars. <br> Not idea of blue shift. |
|  |  |  | Total | 14 |  |

| Question |  | Answer | Marks | Guidance |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{2 2}$ | (a) | The sum of (the random distribution of) the KE and PE of <br> (its) molecules | $\mathbf{B 1}$ | Not if no clear indication of particulate nature, <br> i.e. allow particles or atoms for molecules |
|  | (b) | No change in KE <br> because temperature is constant (during melting) <br> PE of (the molecules) increases (during melting) <br> The internal energy increases | M1 | Allow 'KE is not changing' <br> Not 'KE is not increasing' |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 23 | (a) |  | $V_{(\mathrm{E})}=-\frac{G M}{r}$ | B1 |  |
|  | (b) | (i) | $\begin{aligned} & \mathrm{KE}=1 / 2 m v^{2} \quad \text { and } \quad \mathrm{GPE}=G M m / r \\ & 1 / 2 m v^{2}=G M m / r \text { then a valid step to } v=\sqrt{ }(2 G M / r) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Allow m = $1(\mathrm{~kg}$ ) if clearly defined |
|  |  | (ii) | $\begin{aligned} & \left(v^{2}=2 \times 6.67 \times 10^{-11} \times 0.131 \times 10^{23} / 1.19 \times 10^{6}\right) \\ & v=1200\left(\mathrm{~m} \mathrm{~s}^{-1}\right) \end{aligned}$ | A1 | Answer to 3.s.f. is 1210 |
|  |  | (iii) | Mercury has a higher escape velocity than Pluto (ORA) <br> Mercury is closer to sun and Mercury is hotter (ORA) <br> Molecules on Mercury (are more likely to) have speed higher than the escape velocity | B1 <br> M1 <br> A1 | Allow a supporting calculation (speed is about $4.2 \mathrm{~km} \mathrm{~s}^{-1}$ ) <br> Allow 'required speed' for 'escape velocity' Allow 'fast enough to escape' |
|  |  |  | Total | 7 |  |
