**Physics A**

Unit **H556/01**: Modelling physics

Advanced GCE

**Mark Scheme for June 2018**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

H556/01

Mark Scheme

June 2018

Annotations available in RM Assessor

Annotation		Meaning
	Correct response	Used to indicate the point at which a mark has been awarded ( <b>one tick per mark awarded</b> ).
	Incorrect response	Used to indicate an incorrect answer or a point where a mark is lost.
<b>AE</b>	Arithmetic error	Do not allow the mark where the error occurs. Then follow through the working/calculation giving full subsequent ECF if there are no further errors.
<b>BOD</b>	Benefit of doubt given	Used to indicate a mark awarded where the candidate provides an answer that is not totally satisfactory, but the examiner feels that sufficient work has been done.
<b>BP</b>	Blank page	Use BP on additional page(s) to show that there is no additional work provided by the candidates.
<b>CON</b>	Contradiction	No mark can be awarded if the candidate contradicts himself or herself in the same response.
<b>ECF</b>	Error carried forward	Used in <u>numerical answers only</u> , unless specified otherwise in the mark scheme. Answers to later sections of numerical questions may be awarded up to full credit provided they are consistent with earlier incorrect answers. Within a question, ECF can be given for AE, TE and POT errors but not for XP.
<b>L1</b>	Level 1	L1 is used to show 2 marks awarded and L1 <sup>^</sup> is used to show 1 mark awarded.
<b>L2</b>	Level 2	L2 is used to show 4 marks awarded and L2 <sup>^</sup> is used to show 3 marks awarded.
<b>L3</b>	Level 3	L3 is used to show 6 marks awarded and L3 <sup>^</sup> is used to show 5 marks awarded.
<b>POT</b>	Power of 10 error	This is usually linked to conversion of SI prefixes. Do not allow the mark where the error occurs. Then follow through the working/calculation giving ECF for subsequent marks if there are no further errors.
<b>SEEN</b>	Seen	To indicate working/text has been seen by the examiner.
<b>SF</b>	Error in number of significant figures	Where more SFs are given than is justified by the question, do not penalise. Fewer significant figures than necessary will be considered within the mark scheme. <b>Penalised only once in the paper.</b>
<b>TE</b>	Transcription error	This error is when there is incorrect transcription of the correct data from the question, graphical read-off, formulae booklet or a previous answer. Do not allow the relevant mark and then follow through the working giving ECF for subsequent marks.
<b>XP</b>	Wrong physics or equation	Used in <u>numerical answers only</u> , unless otherwise specified in the mark scheme. Use of an incorrect equation is wrong physics even if it happens to lead to the correct answer.
<b>^</b>	Omission	Used to indicate where more is needed for a mark to be awarded (what is written is not wrong but not enough).

H556/01

## Mark Scheme

June 2018

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

<b>Annotation</b>	<b>Meaning</b>
/	alternative and acceptable answers for the same marking point
<b>Reject</b>	Answers which are not worthy of credit
<b>Not</b>	Answers which are not worthy of credit
<b>Ignore</b>	Statements which are irrelevant
<b>Allow</b>	Answers that can be accepted
()	Words which are not essential to gain credit
—	Underlined words must be present in answer to score a mark
<b>ECF</b>	Error carried forward
<b>AW</b>	Alternative wording
<b>ORA</b>	Or reverse argument

Question		Answer	Marks	Guidance
24	(a)	$y = \sin(\theta) \sqrt{x^2 + y^2}$ compared with "y=mx+c"	B1	<b>Allow:</b> gradient = $\frac{\Delta y}{\Delta(\sqrt{x^2+y^2})}$ with $\sin(\theta) = O/H$ <b>Not:</b> gradient = $\frac{y}{(\sqrt{x^2+y^2})}$ <b>unless</b> "c=0" seen.
	(b)	(i) (Straight line of best fit showing) <u>gradient</u> = 0.73  ( $d\sin\theta = n\lambda$ )  $\frac{1.0 \times 10^{-3}}{600} \times 0.73 = 2 \times \lambda$  $\lambda = 6.1 \times 10^{-7}$ (m)	C1  C1  A1	<b>Allow:</b> gradient in range 0.70-0.76. <b>Allow:</b> evaluation of $\theta = 44-50$ (degrees) in place of gradient  <b>Allow:</b> any subject  <b>Note:</b> Gradient in range 0.70-0.76 gives $\lambda$ in range $(5.8 - 6.4) \times 10^{-7}$ m
		(ii) (Scales/distances are large compared with the absolute uncertainty so) <b>absolute uncertainty is too small</b> to be shown (reasonably on this graph's scale) (AW)	B1	<b>Ignore: error</b> too small
		(iii) (The values for $\lambda$ or $\theta$ will be) less precise (as independent measurements less likely to agree) (AW)	B1	
<b>Total</b>			<b>6</b>
