Advanced GCE

**Mark Scheme for Autumn 2021**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

1. Annotations available in RM Assessor

Annotation	Meaning
	Benefit of doubt given
	Contradiction
	Incorrect response
	Error carried forward
	Level 1
	Level 2
	Level 3
	Transcription error
	Benefit of doubt not given
	Power of 10 error
	Omission mark
	Error in number of significant figures
	Correct response
	Wrong physics or equation

2. Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

<b>Annotation</b>	<b>Meaning</b>
/	alternative and acceptable answers for the same marking point
<b>reject</b>	Answers which are not worthy of credit
<b>not</b>	Answers which are not worthy of credit
<b>Ignore</b>	Statements which are irrelevant
<b>Allow</b>	Answers that can be accepted
( )	Words which are not essential to gain credit
—	Underlined words must be present in answer to score a mark
<b>ECF</b>	Error carried forward
<b>AW</b>	Alternative wording
<b>ORA</b>	Or reverse argument

October 2021

Question			Answer	Marks	Guidance
33	(a)		wavelengths are shortened OR they are blue-shifted ✓	L	<b>Must</b> have idea of change
			because these galaxies are approaching (Milky Way) ✓	L	<b>Allow</b> emitted waves are bunched up <b>not</b> just “because of Doppler effect”
33	(b)	(i)	$1000/1.9 / [4 \times 10^4/660]$ ✓	M	<b>Allow</b> first mark for correctly calculating both gradients – units not required for mark 1929 gradient in range 519 to 526 1998 gradient in range 60.6 to 61.5
			$(= 526 / 60.6) = 8.7$ ✓	M	<b>Allow</b> evaluation in range 8.4 to 8.7  <b>Allow</b> a valid comparison with completed calculation using 8 x 1998 gradient value or 1929 value / 8 for the second mark  <b>Allow max 1</b> for a correct evaluation in the range $> 8, \leq 9$ using correct method but incorrect values from graphs.
33	(b)	(ii)	age = $1/H_0$ ✓	H	method <b>Allow</b> $1 / \text{gradient}$ OR in numbers
			$= [660 \times 3.1 \times 10^{22}] / [4 \times 10^7] \text{ s} = 5.1 \times 10^{17} / 3.2 \times 10^7 \text{ years}$ $= 16 (\pm 2) \times 10^9 \text{ (years)}$ ✓	H	<b>Allow</b> ecf from gradient in b(i) for this mark  evaluation of show that.
<b>Total</b>				<b>5</b>	

H557/01

Mark Scheme

October 2021

Question		Answer	Marks	Guidance
34	(a)	$N = A \times t_{1/2} / \ln 2$ OR $= 8.5 \times 10^6 \times 60 \times 24 \times 3600 / 0.693$ ✓ $= 6.4 \times 10^{13}$ ✓	L L	method evaluation
34	(b)	absorbed dose = $N_0/2 \times 35 \times 10^3 \times 1.6 \times 10^{-19} \times 1/0.05$ ✓ $= 3.6$ (Sv) ✓	M M	method mark for using energy deposited per unit mass  <b>Allow</b> 3.4 Sv using $N_0 = 6 \times 10^{13}$ for 2 marks <b>Allow</b> ecf from 34(a) when $N_0$ rounds to >6 and <7 <b>Allow</b> 1 mark for 7.2 Sv for only $\frac{1}{2}$ decay
34	(c)	cells nearer seed will receive higher dose than farther away / to give more even irradiation / dose will decay away from the seed by $\gamma$ -ray absorption ✓	L	any valid point e.g. spread over greater volume further away <b>Allow</b> spreads out over larger (surface) area further away <b>Allow</b> valid use of $1/R^2$ and / or exponentially
<b>Total</b>			<b>5</b>	

Question		Answer	Marks	Guidance
35	(a)	e.g. lines on graph OR $e^{-1} = 0.37$ ✓ $T = 1300$ (K) ✓	H H	evidence of finding $f$ when $E = kT$  <b>accept</b> answers in range 1100 to 1500 (K) if first mark awarded
35	(b)	the average molecule has energy $kT$ and so will be able to perform the process ✓  Boltzmann factor $e^{-20} \approx 2 \times 10^{-9}$ so only a small fraction of molecules have sufficient energy but make many attempts each second / high collision frequency giving a significant rate ✓	L M	completion : <b>allow</b> very few collisions occur with a pair of molecules with less than energy $kT$  significant rate at $T/20$ : OR Boltzmann tail contains molecules that have much higher than average energy by “getting lucky” / gaining energy from multiple consecutive collisions by chance from the thermal chaos
<b>Total</b> <b>Total section B</b>			<b>4</b> <b>20</b>

October 2021

Question			Answer	Marks	Guidance
41	(a)	(i)	$\Delta m = [1.008665 - \{1.007276 + 0.000549\}] = 0.00084 \text{ u}$ ✓	L	find mass defect in u
			$= 0.78(2) \text{ (MeV)}$ ✓	L	convert to MeV
41	(a)	(ii)	“missing” energy / momentum was carried by an (anti)neutrino / a particle of tiny rest mass and zero charge ✓	M	<b>Allow</b> Energy (of beta particle) is shared with (anti)neutrino / a particle of tiny rest mass and zero charge
41	(a)	(iii)	$A = \lambda N = \ln 2 / t_{1/2} \times 10^4$ ✓	M	Allow alternative method – e.g. calculate $N$ remaining after 1 s (for 1 mark) and subtract from $10^4$ (for second mark)
			$= 10 \text{ or } 11 \text{ (} 10.7 \text{ s}^{-1}\text{)}$ ✓	M	evaluation do <b>not</b> penalise non-integer values
41	(a)	(iv)	d quark changes → u quark ✓	L	<b>Allow</b> udd → uud
41	(b)		stable neutrons exist in nuclei of light elements very close to $N = Z$ OR $N/Z = 1$ ✓	M	<b>Allow</b> vice-versa – e.g. unstable neutrons exist for nuclei where $N/Z > 1$ <b>Allow</b> worded explanation, for example with reference to concept of “neutron rich” <b>Allow</b> unstable nuclei become stable by beta emission which increases $Z$ to become closer/equal to $N$ Not just “they are stable”
