GCE Physics A

## Mark Scheme for January 2011

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

1. Abbreviations, annotations and conventions used in the detailed Mark Scheme.

| / | $=$ alternative and acceptable answers for the same marking point |
| :--- | :--- |
| (1) | $=$ separates marking points |
| allow | $=$ answers that can be accepted |
| not | $=$ answers which are not worthy of credit |
| reject | $=$ answers which are not worthy of credit |
| ignore | $=$ statements which are irrelevant |
| () | $=$ words which are not essential to gain credit |
| $\overline{\text { ecf }}$ | $=$ underlined words must be present in answer to score a mark |
| AW | $=$ error carried forward |
| ora | $=$ or reverse wording argument |

2. Annotations: the following annotations are available on SCORIS.
$\checkmark \quad=$ correct response
x = incorrect response
$\mathrm{AE}=$ arithmetic error
BOD = benefit of the doubt (where professional judgement has been used)
NBOD = benefit of the doubt not given
ECF = error carried forward
$\wedge \quad=$ information omitted
CON = contradiction (in cases where candidates contradict themselves in the same response)
RE = rounding error
$\mathrm{SF}=$ error in the number of significant figures
POT = error in the power of 10 in a calculation
? $\quad=$ wrong physics or equation
NAQ = not answered question
FT = follow through

## CATEGORISATION OF MARKS

The marking schemes categorise marks on the MACB scheme.

B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

M marks: These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the dependent Amarks can be scored.

C marks: These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the C-mark is given.

A marks:
These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

| Q 1 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | work done $\rightarrow \mathrm{N} \mathrm{m}$ $\begin{aligned} & \text { stress } \rightarrow \mathrm{N} \mathrm{~m}^{-2} \\ & \text { density } \rightarrow \mathrm{kg} \mathrm{~m}^{-3} \end{aligned}$ | B2 | Allow 2 marks if all correct <br> Allow 1 mark if one or two responses are correct |
| b(i) | weight / gravitational force | B1 | Not 'gravity' |
| b(ii) | $\begin{aligned} & (\text { force }=) 4.8 \times 9.81(=47.1 \mathrm{~N}) \\ & \text { pressure }=\frac{4.8 \times 9.81}{0.085 \times 0.085} \\ & \text { pressure }=6.52 \times 10^{3}(\mathrm{~Pa}) \end{aligned}$ | $\overline{\mathrm{C} 1}$ <br> A1 | Note: 2 marks for bald 2 sf answer of $6.5 \times 10^{3}(\mathrm{~Pa})$ <br> Allow 1 mark for ' $48 / 0.085^{2}=6.64 \times 10^{3}$; $g$ taken as $10\left(\mathrm{~N} \mathrm{~kg}^{-1}\right)$ <br> Allow 1 mark for ' $4.8 \times 9.81 / 8.5^{2}=0.65$ ' <br> Not 'mass/area' since it is 'wrong physics'. |
| b(iii) | $\begin{aligned} & \hline 8 \\ & 4 \\ & 2 \end{aligned}$ | B1 <br> B1 <br> B1 | This must be consistent with the values for mass and crosssectional area. |
|  | Total | 8 |  |

| Q2 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | The distance travelled (by the car) from when the driver sees a problem and the brakes are applied | B1 | Note: There must be reference to 'stimulus' and brakes. <br> Not: ‘speed $\times$ reaction time’ |
| b | Distance / displacement | B1 |  |
| c(i) | $\begin{aligned} & \text { distance }=20 \times 0.5 \\ & \text { distance }=10(\mathrm{~m}) \end{aligned}$ | B1 |  |
| c(ii) | $\begin{aligned} & \text { distance }=\text { area under graph } \\ & \text { distance }=1 / 2 \times 20 \times 3.5 \\ & \text { distance }=35(\mathrm{~m}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Allow 1 mark if stopping distance of 45 m quoted No marks for an answer of ' $20 \times 3.5=70(\mathrm{~m})$ ' |
| d(i) | $\begin{aligned} & \text { gradient }=\text { 'acceleration' } / a=\frac{v-u}{t} / a=\frac{\Delta v}{\Delta t} \\ & a=(-) \frac{20}{3.5} \\ & \text { deceleration }=5.71(4) \approx 5.7\left(\mathrm{~m} \mathrm{~s}^{2}\right) \end{aligned}$ | C1 A1 | The first mark is for selecting correct equation or stating $a=$ gradient <br> Note: Ignore negative sign |
| d(ii) | $\begin{aligned} & \text { force }=910 \times 5.71 \\ & \text { force } \approx 5200(\mathrm{~N}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Possible ecf from (d)(i) |
| e | Increases by a factor of 4 <br> Braking distance $\propto$ speed $^{2} /$ <br> ' $F X=1 / 2 m v^{2}$ '/ speed doubles and time doubles | $\begin{aligned} & \hline \text { B1 } \\ & \text { B1 } \end{aligned}$ |  |

| Q2 | Expected Answers | Marks | Additional Guidance |
| :---: | :--- | :---: | :--- |
| f | Large deceleration / rapid decrease in speed <br> (triggers the air bag) <br> Prevent collision with steering wheel / windscreen <br> / dashboard <br> Time (for stopping) is more / distance (for <br> stopping) is more <br> Smaller deceleration / acceleration (of person) <br> B1 | B1 | Not 'quick / sudden / rapid deceleration' <br> Not 'large acceleration' |
|  | B1 | Allow: 'smaller rate of change of momentum' <br> Not 'smaller rate of deceleration' |  |

| Q3 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | work (done) $=$ force $\times$ distance moved in the direction of force | B1 | Allow: work $=$ force $\times$ displacement in direction of force Not: work (done) = energy transfer |
| b(i) | (Net/total/resultant force is) zero <br> The acceleration is zero | $\begin{aligned} & \hline \text { B1 } \\ & \text { B1 } \end{aligned}$ | Not ' $\mathrm{a}=0$ ' |
| b(ii) | $\begin{aligned} & 9.0 \times 10^{3} \cos 83^{\circ} \text { or } 9.0 \times 10^{3} \sin 7^{\circ} \\ & 1.1 \times 10^{3}(\mathrm{~N}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Not ' $9.0 \times 10^{3} \cos 7^{\circ}$, |
| b(iii) | $\begin{aligned} & \text { work done per second }=300 \times 18 \\ & \text { work done per second }=5400\left(\mathrm{~J} \mathrm{~s}^{-1}\right) \end{aligned}$ | B1 |  |
| b(iv) | ```(total force down slope =) \(1100+300(\mathrm{~N})\) (power =) \(1400 \times 18\) (power \(=\) ) \(2.52 \times 10^{4}(\mathrm{~W})\) or \(2.5 \times 10^{4}(\mathrm{~W})\) or rate of work done against weight \(=1.1 \times 10^{3} \times 18(=19800 \mathrm{~W})\) power \(=19800+5400\) power \(=2.52 \times 10^{4}(\mathrm{~W})\) or \(2.5 \times 10^{4}(\mathrm{~W})\)``` | C1 <br> C1 <br> A1 <br> C1 <br> C1 <br> A1 | Allow: 1400 (N) <br> Possible ecf from (b)(ii) <br> Allow: ' ${ }^{\prime} \mathrm{Fx} \cos \theta=9.0 \times 10^{3} \times 18 \times \cos 83^{\circ}$, <br> Possible ecf from (b)(ii) and (b)(iii) |
|  | Total | 9 |  |

| Q4 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | kinetic energy $=1 / 2 \times$ mass $\times$ speed $^{2}$ | B1 | Allow $\mathrm{KE}=1 / 2 m v^{2}$, where $m=$ mass and $v=$ speed Allow velocity instead of speed Not: $K E=1 / 2 m v^{2}$ on its own |
| b(i) | $\begin{aligned} & \text { initial } \mathrm{KE}=1 / 2 \times 3.0 \times 10^{-2} \times 200^{2}(=600 \mathrm{~J}) \\ & \text { final } \mathrm{KE}=1 / 2 \times 3.0 \times 10^{-2} \times 50^{2}(=37.5 \mathrm{~J}) \\ & \text { Loss in } \mathrm{KE}=600-37.5 \\ & \text { Loss in } \mathrm{KE}=562.5(\mathrm{~J}) \approx 560(\mathrm{~J}) \end{aligned}$ | C1 <br> C1 <br> A1 | Special case: 1 mark for ' $\mathrm{KE}=1 / 2 \mathrm{mb}^{\underline{2}}$... loss in $\mathrm{KE}=(1 / 2 \times 3.0 \times$ $10^{-2} \times 200-1 / 2 \times 3.0 \times 10^{-2} \times 50=$ ) $2.25(\mathrm{~J})^{\prime}$ <br> Note: No marks for $337.5(\mathrm{~J})$ when $\Delta v$ used in the KE equation $\left(1 / 2 \times 3.0 \times 10^{-2} \times 150^{2}=337.5 \mathrm{~J}\right)$ |
| b(ii) | $\begin{aligned} & \text { work done }=(\text { loss in }) \text { KE } / a=\left(v^{2}-u^{2}\right) / 2 s \\ & F \times 1.5 \times 10^{-2}=562.5 \quad / \quad a=(-) 1.25 \times 10^{6} \\ & \text { force }=3.75 \times 10^{4}(\mathrm{~N}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Possible ecf from (b)(i) <br> Allow: A 2 sf answer of either $3.8 \times 10^{4}(\mathrm{~N})$ or $3.7 \times 10^{4}(\mathrm{~N})$ |
|  | Total | 6 |  |

| Q5 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | ...incorrect <br> Mass (of the particle) increases (as it approaches speed of light) | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | In question 5, use tick or cross on Scoris to show if the mark is awarded <br> Not: mass changes |
| b | ....correct <br> KE is changed into (G)PE or (G)PE is changed into KE or change in $\mathrm{KE}=$ change in (G)PE (AW) | M1 <br> A1 | Note: This mark is for stating the transfer of energy between kinetic and (gravitational) potential |
| c | ...incorrect <br> Weight is equal to drag / air resistance / friction (and not acceleration of free fall) | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | Allow alternative response: $\qquad$ incorrect <br> Acceleration and weight are not the same quantities (AW) |
| d | ...incorrect <br> The technique is trilateration <br> $\checkmark$ The term trilateration to be included and spelled correctly to gain the A1 mark | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | Note 1 mark if 'trilateration' is misspelled but candidate has mentioned that the statement is incorrect |
|  | Total | 8 |  |

| Q6 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | A pair of equal and opposite forces (with their lines of action separated by a distance) <br> The term opposite to be included and spelled correctly to gain mark | B1 | Must use tick or cross on Scoris to show if the mark is awarded <br> No mark can be scored if there is no reference 'opposite'. (Allow 'opposing') |
| b(i) | moment $=$ force $\times$ perpendicular distance from pivot / axis / point | B1 |  |
| b(ii) | $\begin{aligned} & (\text { clockwise moment }=) 20 \times 0.60 \\ & \text { and (anticlockwise moments =) } 10 \times 0.20+30 \\ & \times 0.30 \end{aligned}$ <br> (Not in equilibrium because) clockwise moment $\neq$ anticlockwise moment / clockwise moment > anticlockwise moment / 12 (Nm) > 11 (Nm) / 12 (Nm) $\neq 11$ (Nm) | M1 <br> A1 | Allow a correct moments equation involving all three forces |
|  | Total | 4 |  |

| Q7 | Expected Answers | Marks | Additional Guidance |
| :---: | :--- | :---: | :--- |
| a(i) | Y (is brittle) | B1 |  |
| a(ii) | (Both) obey Hooke's law | Allow (For both) stress $\propto$ strain / elastic (behaviour) / 'not <br> plastic (behaviour)' / force $\propto$ extension <br> Not: 'straight line(s)' |  |
| a(iii) | Gradient (of the linear section) is equal to Young <br> Modulus / gradient is largest <br> $\mathbf{X}$ (has largest Young modulus) | B1 | Allow: 'slope' for 'gradient' |
| $\mathbf{b}$ | (force increases by a factor of) $30^{2}$ <br> force $=240 \times 30^{2}$ <br> force $=2.16 \times 10^{5}(\mathrm{~N})$ | C1 | A1 |
|  | Total | $\mathbf{6}$ |  |

| Q8 | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| a | $\begin{aligned} & \text { time }=1.2 / 8.0 \\ & \text { time }=0.15(\mathrm{~s}) \end{aligned}$ | M1 <br> A0 | Note: The mark is for dividing the distance by the speed hence must be seen |
| b | $\begin{aligned} & s=u t+\frac{1}{2} a t^{2} \text { and } u=0 \quad / \quad s=\frac{1}{2} a t^{2} \quad / \\ & h=\frac{1}{2} \times 9.81 \times 0.15^{2} \\ & h=0.11(\mathrm{~m}) \end{aligned}$ | C1 <br> A1 |  |
| c | They both have same (vertical) acceleration / same acceleration of free fall / acceleration of $9.8 \underline{\mathrm{~ms}}^{-2}$ (and zero initial vertical velocity) | B1 | Note: Must have reference to both objects |
|  | Total | 4 |  |
