## CATEGORISATION OF MARKS

The marking schemes categorise marks on the MACB scheme.

B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

M marks: These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the dependent Amarks can be scored.

C marks: These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the $\mathbf{C}$-mark is given.

A marks: These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

## SIGNIFICANT FIGURES

In general, there is no penalty when the candidate's answer is more than the sf of the data given in the question.
For example, in a question where the data is given to 2 sf, the answer can be 2 sf or more. An answer given to 1 sf may be penalised.

| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) | (i) | Both measured in metre/m | B1 | Allow: Both have the same unit/Both have 'magnitude' Not: Both are distance/length |
|  |  | (ii) | Distance is a scalar/does not have direction or Displacement is a vector/has direction | B1 | Not: One is a vector and the other a scalar |
|  | (b) | (i) | $\begin{aligned} & \text { time }=\frac{3.6 \times 10^{5}}{170} \\ & \text { time }=2.1(18) \times 10^{3}(\mathrm{~s}) \text { or } 2.1 \times 10^{3}(\mathrm{~s}) \end{aligned}$ | B1 | Note: Answer to 2sf or more is required |
|  |  | (ii) | Correct vector triangle Eg: $\begin{aligned} & s^{2}=360^{2}+100^{2} \quad / \quad s=\sqrt{\left(360^{2}+100^{2}\right)} \\ & s=373.6(\mathrm{~km}) / 370(\mathrm{~km}) \end{aligned}$ | B1 <br> C1 <br> A1 | The vector triangle must have at least two labels (360, 100 and $s$ - allow $x$ or $d$ for $s$ ). The 'orientation' of the triangle must be as shown. Ignore the direction of the arrows. <br> Allow: Full credit can be given for a scale drawing 2 marks if answer in the range ( $370-380$ ) 1 mark if answer in the range (360-370) or (380-390) <br> Note: Bald answer to 2sf or more and no diagram scores $2 / 3$ marks. |
