GCE Physics A

## Advanced Subsidiary GCE

## Mark Scheme for June 2012

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry
Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Annotations available in scoris

| Annotation | Meaning |
| :---: | :---: |
| -Tio | Benefit of doubt given |
| [F\% | Contradiction |
| 3 | Incorrect response |
| [-5] | Error carried forward |
| $\square$ | Follow through |
| [以14] | Not answered question |
| P | Benefit of doubt not given |
| [10 | Power of 10 error |
| - | Omission mark |
| 맘 | Rounding error |
| $\Gamma \square 7$ | Error in number of significant figures |
| $\checkmark$ | Correct response |
| -1] | Arithmetic error |
| $4$ | Wrong physics or equation |

The abbreviations, annotations and conventions used in the detailed mark scheme are:

| Annotation | Meaning |
| :---: | :--- |
| $\mathbf{l}$ | alternative and acceptable answers for the same marking point |
| reject | Separates marking points |
| not | Answers which are not worthy of credit |
| IGNORE | Answers which are not worthy of credit |
| ALLOW | Answers that can be accepted |
| $\mathbf{( )}$ | Words which are not essential to gain credit |
| - | Underlined words must be present in answer to score a mark |
| ecf | Or reverse argument forward |
| AW |  |
| ORA |  |

## CATEGORISATION OF MARKS

The marking schemes categorise marks on the MACB scheme.

B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

M marks:

C marks:

A marks:

These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the dependent Amarks can be scored.

These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the $\mathbf{C}$-mark is given.

These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

## Note about significant figures:

If the data given in a question is to 2 sf, then allow answers to 2 or more sf.
If an answer is given to fewer than 2 sf, then penalise once only in the entire paper.
Any exception to this rule will be mentioned in the Additional Guidance.

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) |  | A vector quantity has direction / scalar quantity does not have direction | B1 | Not: 'Scalar only has magnitude' because there is no mention of direction |
|  | (b) | (i) | acceleration | B1 |  |
|  |  | (ii) | power and energy | B1 |  |
|  |  | (iii) | stress and pressure unit: pascal / $\mathrm{Pa} / \mathrm{Nm}^{-2} / \mathrm{kg} \mathrm{m}^{-1} \mathrm{~s}^{-2}$ | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | Note: The A1 mark can only be scored if M1 is awarded |
|  | (c) |  | $10^{12}$ | B1 |  |
|  | (d) |  | $p \mu c k$ | B1 |  |
|  |  |  | Tot | 7 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | (a) |  | velocity $=$ rate of change of displacement | B1 | Allow: Equation if labels are defined Not: velocity = displacement/time Not: A mixture of quantity and unit, e.g: 'change in displacement per second' |
|  | (b) |  | work done $=$ force $\times$ distance moved in direction of force | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | Allow: 'force $\times$ displacement' for the M1 mark |
|  | (c) | (i) | It is at right angles to motion | B1 | Allow: It is at right angles to slope / sledge |
|  |  | (ii) | The component of the weight / W/mg (down the slope) | B1 | Allow: $W \sin \theta$ or $m g \sin \theta$ Not: 'component of gravity' Allow: Resultant of $W$ and $N$ |
|  | (d) | (i) | $\begin{aligned} & \hline 1 \\ & \text { acceleration }=\text { gradient } \quad / a=(v-u) / t \\ & a=3.0 / 1.5 \\ & a=2.0\left(\mathrm{~m} \mathrm{~s}^{-2}\right) \\ & 2 \\ & a=g \sin \theta \\ & \sin \theta=2.0 / 9.81 \\ & \theta=12^{\circ} \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Allow: 1 sf answer <br> Possible ecf from incorrect value of acceleration a <br> Answer to 3 sf is $11.8^{\circ}$ <br> Note: Using $10 \mathrm{~m} \mathrm{~s}^{-2}$ gives an answer of $11.5^{\circ}$ - award 2 marks |
|  |  | (ii) | $\begin{aligned} & a=(-) 15 / 3.5 \text { or } a=(-) 4.29\left(\mathrm{~m} \mathrm{~s}^{-2}\right) \\ & m=510 / 4.29 \\ & \text { mass }=120(\mathrm{~kg}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Ignore sign <br> Answer to 3 sf is $119(\mathrm{~kg})$ |
|  |  |  | Total | 12 |  |

| Question |  | Answer | Marks | Guidance |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 4 | (a) | (i) | Two equal but opposite forces | B1 |  |
|  |  | (ii) | torque = one of the forces $\times$ perpendicular distance <br> between the forces | B1 | Use tick or cross on Scoris |
|  | (b) | (i) | It will rotate / spin / turn <br> Rotation is clockwise / (continue) to travel from left to right/ <br> the rotational speed increases (with time) | B1 <br> B1 |  |
|  |  | (ii) | It will accelerate <br> The idea that acceleration is to the right / Suggestion that <br> satellite will 'turn' | B1 | Allow: 'speed up' / 'speed increases' / 'velocity increases' / <br> 'move faster' |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 5 | (a) | $\begin{aligned} & \text { (net vertical force =) } 120-90 \\ & F^{2}=30^{2}+18^{2} \\ & \text { net force }=35(\mathrm{~N}) \end{aligned}$ $\begin{aligned} \tan \theta & =30 / 18 \\ \text { angle } & =59^{\circ} \end{aligned}$ | C1 <br> C1 <br> A1 <br> B1 | Allow: 2 marks for 1224 ( N ) - answer not square-rooted <br> Allow: 1 mark for resultant of 18 and 90 ; equal to 91.8 ( N ) <br> Allow: 1 mark for resultant of 18 and 120 ; equal to 121.3 (N) <br> Alternative for scale drawing: <br> (net vertical force =) $30(\mathrm{~N})$ <br> Correct 'triangle'; at least one of the sides labelled <br> $F$ in the range 34 to $36(\mathrm{~N})$ <br> Possible ecf from net force |
|  | (b) | Any two from: <br> - speed of balloon <br> - (frontal) area <br> - texture of balloon <br> - temperature of air / density of air / viscosity (of air) | B1×2 | Not: size / shape of balloon |
|  |  | Total | 6 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | (a) |  | Material X <br> It is a brittle material <br> No plastic deformation / It is elastic / It returns to same <br> length when stress / force is removed <br> Material $\mathbf{Y}$ <br> It is a polymeric / polymer (material) <br> It is elastic / It returns to same length when stress / force is removed <br> X obeys Hooke's law / Y does not obey Hooke's law | B1 <br> B1 <br> B1 <br> B1 <br> B1 | Use ticks on Scoris to show where the marks are awarded <br> $\checkmark$ Brittle must be spelled correctly to gain the mark. <br> Allow: rubber / 'elastic band' <br> Allow: energy 'lost' (when unloaded) |
|  | (b) |  | Place the 100 g mass on the spring / hang the 100 g mass from the spring <br> Determine the extension / compression of the spring (using a ruler) force constant $=0.98(1) /$ extension | B1 <br> B1 <br> B1 | Allow: $k=(0.1 \times 9.8) /$ extension <br> Allow: $k=1.0(\mathrm{~N}) /$ /extension |
|  | (c) | (i) | $\begin{aligned} & F=k x \\ & F=50 \times 0.070 \quad \mid \quad F=3.5(\mathrm{~N}) \\ & a=3.5 / 0.180 \quad 19\left(\mathrm{~m} \mathrm{~s}^{-2}\right) \\ & \text { acceleration }=1 \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Answer to 3 sf is $19.4\left(\mathrm{~m} \mathrm{~s}^{-2}\right)$ |
|  |  | (ii) | $\begin{aligned} \text { average work done } & =\text { average force } \times \text { displacement } \\ & =1.75 \times 0.070(=0.1225) \\ \text { av rate of work done } & =0.1225 / 0.094 \\ \text { av rate of work done } & =1.3\left(\mathrm{~J} \mathrm{~s}^{-1}\right) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Aternative (allow full credit for other correct methods) $\begin{array}{ll} E=\frac{1}{2} \times 50 \times 0.070^{2}(=0.1225) & \text { C1 } \\ \text { power }=0.1225 / 0.094 \\ \text { power }=1.3\left(\mathrm{~J} \mathrm{~s}^{-1}\right) & \\ \text { A1 } \end{array}$ |
|  |  |  | Total | 13 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | (a) |  | power = work done/ time or energy/time or 'rate of work done' | B1 |  |
|  | (b) |  | ```power = KE/time Using }\frac{1}{2}m\mp@subsup{v}{}{2 (power =) 1/2 < 9.7 }\times1\mp@subsup{0}{}{5}(\mp@subsup{\textrm{kg s}}{}{-1})\times3.\mp@subsup{0}{}{2 (power =) 4.365 \times 100 (W)``` | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A0 } \end{aligned}$ | Allow: 1 mark for a bald answer of $4.37 \times 10^{6}$ since this is a 'show' question |
|  | (c) |  | $\begin{aligned} & \text { efficiency }=\frac{1.2}{4.4} \times 100 \\ & \text { efficiency }=27 \% \end{aligned}$ | B1 | Note: Answer to 3 sf is $27.3 \%$ if $4.4 \times 10^{6}$ is used Note: Answer is $27.5 \%$ if $4.365 \times 10^{6}$ is used Not: 0.27 |
|  | (d) |  | $\begin{aligned} & \text { (volume per second =) } 9.7 \times 10^{5} / 1030 \text { or } 941.7 \\ & \text { mass per second }=\text { density } \times \text { volume per second } \\ & 9.7 \times 10^{5}=1030 \times\left(3.0 \times \pi \times r^{2}\right) \\ & r^{2}=\frac{9.7 \times 10^{5}}{1030 \times 3 \pi} \\ & \text { radius }=10(\mathrm{~m}) \end{aligned}$ | C1 <br> C1 <br> A1 | Allow any subject <br> Allow: 2 marks for 100 (m); answer not square rooted |
|  | (e) | (i) | water has greater density or water has greater mass / KE for the same volume | B1 |  |
|  |  | (ii) | Any one from: <br> - Not an eyesore / cannot be seen <br> - Not noisy <br> - Predictable energy (with in and out tides) <br> - Do not occupy space on the land | B1 | Allow other sensible suggestions |
|  |  |  | Total | 9 |  |
