## Mark Scheme for June 2014

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

These are the annotations, (including abbreviations), including those used in scoris, which are used when marking

| Annotation | Meaning |
| :--- | :--- |
| BP | Blank Page - this annotation must be used on all blank pages within an answer booklet (structured or <br> unstructured) and on each page of an additional object where there is no candidate response. <br> Benefit of doubt given |
| BOD | Contradiction |
| CON | Incorrect response |
| E | Error carried forward |
| ECF | Follow through |
| FT | Not answered question |
| NAQ | Benefit of doubt not given |
| NBOD | Power of 10 error |
| POT | Omission mark |
| A | Rounding error or repeated error |
| RE | Error in number of significant figures |
| SF | Correct response |
| A | Arithmetic error |
| AE | Wrong physics or equation |
| S |  |

Abbreviations, annotations and conventions used in the detailed Mark Scheme

| Annotation | Meaning |
| :---: | :--- |
|  | alternative and acceptable answers for the same marking point |
| reject | Separates marking points |
| not | Answers which are not worthy of credit |
| IGNORE | Answers which are not worthy of credit |
| ALLOW | Statements which are irrelevant |
| () | Answers that can be accepted |
| $\overline{\text { ecf }}$ | Words which are not essential to gain credit |
| AW | Underlined words must be present in answer to score a mark |
| ORA | Error carried forward |
|  | Alternative wording |
|  | Or reverse argument |

Abbreviations, annotations and conventions used in the detailed Mark Scheme

| Annotation | Meaning |
| :---: | :--- |
|  | alternative and acceptable answers for the same marking point |
| reject | Separates marking points |
| not | Answers which are not worthy of credit |
| IGNORE | Answers which are not worthy of credit |
| ALLOW | Statements which are irrelevant |
| () | Answers that can be accepted |
| $\overline{\text { ecf }}$ | Words which are not essential to gain credit |
| AW | Underlined words must be present in answer to score a mark |
| ORA | Error carried forward |
|  | Alternative wording |
|  | Or reverse argument |

## Subject-specific Marking Instructions

## CATEGORISATION OF MARKS

The marking scheme categorises marks on the MABC scheme
B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks: These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular M-mark, then none of the dependent Amarks can be scored.

C marks: These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a Cmark and the candidate does not write down the actual equation but does correct working which shows that the candidate knew the equation, then the C-mark is given.

A marks: These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

## IMPORTANT UPDATE:

ADDITIONAL OBJECTS: You must annotate the additional objects for each script you mark. If no credit is to be awarded for the additional object, please use annotation as agreed at the SSU, likely to be 'seen', a cross or the highlighting tool.

## CROSSED OUT, RUBRIC ERROR (OPTIONAL QUESTIONS) AND MULTIPLE RESPONSES

Crossed-out Responses: Where a candidate has crossed out a response and provided a clear alternative then the crossed out response is not marked. Where no alternative response has been provided, examiners may give candidates the benefit of the doubt and mark the crossed out response where legible.

Rubric Error Responses - Optional Questions: Where candidates have a choice of question across a whole paper or a whole section and have provided more answers than required, then all responses are marked and the highest mark allowable within the rubric is given. (The underlying assumption is that the candidate has penalised themselves by attempting more questions than necessary in the time allowed.)

Multiple Choice Question Responses: When a multiple choice question has only a single, correct response and a candidate provides two responses (even if one of these responses is correct), then no mark should be awarded (as it is not possible to determine which was the first response selected by the candidate).
When a question requires candidates to select more than one option/multiple options, then local marking arrangements need to ensure consistency of approach.

Contradictory Responses: When a candidate provides contradictory responses, then no mark should be awarded, even if one of the answers is correct.

Short Answer Questions (requiring only a list by way of a response, usually worth only one mark per response): Where candidates are required to provide a set number of short answer responses then only the set number of responses should be marked. The response space should be marked from left to right on each line and then line by line until the required number of responses have been considered. The remaining responses should not then be marked. Examiners will have to apply judgement as to whether a 'second response' on a line is a development of the 'first response', rather than a separate, discrete response. (The underlying assumption is that the candidate is attempting to hedge their bets and therefore getting undue benefit rather than engaging with the question and giving the most relevant/correct responses.)

Short Answer Questions (requiring a more developed response, worth two or more marks): If the candidates are required to provide a description of, say, three items or factors and four items or factors are provided, then mark on a similar basis - that is downwards (as it is unlikely in this situation that a candidate will provide more than one response in each section of the response space.)

Longer Answer Questions (requiring a developed response): Where candidates have provided two (or more) responses to a medium or high tariff question which only required a single (developed) response and not crossed out the first response, then only the first response should be marked.

Examiners will need to apply professional judgement as to whether the second (or a subsequent) response is a 'new start' or simply a poorly expressed continuation of the first response.

Note about significant figures:
If the data given in a question is to 2 sf, then allow answers to 2 or more sf.
If an answer is given to fewer than 2 sf, then penalise once only in the entire paper.
Any exception to this rule will be mentioned in the Guidance.
Please put a tick for every mark awarded in the body of the text at the point where the mark is given.

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | a | i | V is not proportional to I | B1 | accept not a straight line; R is not constant |
|  |  | ii | R (approximately) constant up to $\mathrm{V}=0.5 \mathrm{~V}$ and $\mathrm{I}=50 \mathrm{~mA}$ so $R=0.5 / 0.05=10(\Omega)$ | B1 <br> B1 | allow graph is (almost) linear/straight (to $\mathrm{V}=0.5 \mathrm{~V}$ ) or constant gradient <br> allow any correct calculation, e.g. 0.2/0.02 |
|  |  | iii | the resistivity/resistance of the (metal) filament increases with temperature the larger the current in the filament the hotter it becomes/AW | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | larger current heats filament <br> so resistance increases or electron-ion collisions increase/AW; allow atom for ion |
|  | b |  | Any potential divider argument or calculation In the light parallel combination less than or about 1 ת/AW so V across lamp less than 0.5 V (so lamp out)/ small compared to $V$ across $25 \Omega$ | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \end{aligned}$ | QWC the arguments must be clear for full marks allow $R_{\text {lamp }}=10$ to $25 \Omega$ for any calculation or comparison of voltage across $25 \Omega$ to $1 \Omega$ N.B. answers given in terms of current are likely to score zero |
|  |  |  | In the dark parallel combination about $25 \Omega / \mathrm{AW}$ so V across lamp approximately 6.0 V so lamp on | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ |  |
|  |  |  | Total | 10 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | a |  | emf - J C ${ }^{-1}$, resistance - $\mathrm{V} \mathrm{A}^{-1}$, energy - V C, charge - A s | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | 4 correct 2 marks; 2 correct 1 mark |
|  | b | i | energy per unit charge transferred from electrical to other forms | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | NOT coulomb allow any other form e.g. heat, light, etc |
|  |  | ii | (some) energy is transferred into thermal energy /lost as heat in (driving charge through) the battery. It behaves as if it has an (internal) resistance/AW <br> or there is a voltage drop across/decrease in voltage from the battery (when a current is drawn from it)/AW | B1 | allow any description which uses E = V + Ir but not just the formula alone, e.g. 'lost volts' per unit current is just accepable |
|  |  | iii | p.d. across each branch is the same/branches in parallel resistance in X branch is $6 \Omega$, in YZ branch is $12 \Omega$ <br> so current in X branch is twice that in YZ branch/ as $\mathrm{V}=\mathrm{IR}$ | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { A0 } \end{aligned}$ | allow R in X branch is half that in YZ branch/AW |
|  |  | iv | $\begin{aligned} & \mathrm{V}=\mathrm{IR}=0.08 \times 6 \\ & \mathrm{~V}=0.48(\mathrm{~V}) \end{aligned}$ | $\begin{aligned} & \hline \text { C1 } \\ & \text { A1 } \end{aligned}$ |  |
|  |  | v | the p.d. across each $3 \Omega$ resistor is terminal p.d. $/ 2$ or 0.48 V at $Z$ there is $6 \Omega$ either way to the supply/AW so p.d. across each $6 \Omega$ is terminal p.d./2 so p.d. between X and Z is zero | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { A0 } \end{aligned}$ | p.d./voltage across $3 \Omega$ and $6 \Omega$ are equal with justification |
|  |  | vi | $\begin{aligned} & \text { terminal p.d. }=0.96 \mathrm{~V} \\ & \text { current in } r=0.16+0.08=0.24 \mathrm{~A} \\ & \text { use of } \mathrm{E}=\mathrm{V}+\mathrm{Ir} \\ & 1.2=0.96+0.24 \mathrm{r} \text { giving } \mathrm{r}=1.0(\Omega) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | $\begin{aligned} & \text { or } V=0.24 \times 4 \text { or }=0.08 \times 12 \text { or } 0.16 \times 6 \text { or (iv) } \times 2 \\ & \text { alt: } R \text { in parallel gives } 4.0 \Omega \text {; } \\ & \text { total } R=1.2 / 0.24=5.0 \Omega \\ & r=5.0-4.0=1.0(\Omega) \text { allow } 1 \mathrm{SF} \end{aligned}$ |
|  |  |  | Total | 15 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | a |  | p.d./voltage (across component) divided by current (in it) | B1 | accept V/I with V and I defined; per (unit) current, etc |
|  | b | i | $\begin{aligned} & \mathrm{R}=\mathrm{\rho l} / \mathrm{A} \\ & =1.7 \times 10^{-8} \times 20 \times \mathrm{d} / 4 \mathrm{~d}^{2}=1.7 \times 10^{-8} \times 5 / 3.8 \times 10^{-10} \\ & =220(\Omega) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | allow $A=4 \pi r^{2}=4.5 \times 10^{-19}$ giving $285 \Omega$ accept 220 to $230 \Omega$ |
|  |  | ii | $\mathrm{n}=1 / \mathrm{d}^{3}=\left(1.8 \times 10^{28}\right)$ | A1 | accept alternatives, e.g. 80/volume |
|  |  | iii | $\begin{aligned} I & =n A e v \\ & =1.8 \times 10^{28} \times 4 \times\left(3.8 \times 10^{-10}\right)^{2} \times 1.6 \times 10^{-19} \times 1.9 \times 10^{-5} \\ & =3.2 \times 10^{-14}(\mathrm{~A}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | 1 mark for substitution into formula, ecf $n$, $A$ values accept 3.16 and 3.5 (using $n=2 \times 10^{28}$ ) accept 2.48 and 2.76 (for $285 \Omega$ ) |
|  |  | iv | $\begin{aligned} \mathrm{P} & =I^{2} \mathrm{R} \\ & =\left(3.2 \times 10^{-14}\right)^{2} \times 200 \times 10^{9} \\ & =2.0 \times 10^{-16}(\mathrm{~W}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | ecf b(i) \& (iii) <br> accept 1 SF as estimate; can obtain 1.2 to 2.8 using all values possible in (iii) |
|  | c |  | electron moves at drift velocity signal travels at/close to the speed of light | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | accept answers explaining idea of drift velocity |
|  |  |  | Total | 12 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | a | i | ammeter in series voltmeter in parallel with LED | B1 | both correct to score 1 mark |
|  |  | ii | $\begin{aligned} & (\text { at } 20 \mathrm{~mA}) \mathrm{V}_{\text {led }}=4.0 \mathrm{~V} \\ & \mathrm{~V}_{\mathrm{R}}=0.020 \times 100=2.0 \mathrm{~V} \\ & \text { so p.d. }=6.0 \mathrm{~V} \end{aligned}$ | $\begin{aligned} & \text { B1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | $\begin{aligned} & \text { allow } R_{\text {led }}=(4.0 / 0.02)=200 \Omega \\ & \text { p.d. }=0.020(200+100) \\ & \text { allow answer to } 1 \mathrm{SF} \end{aligned}$ |
|  | b | i | energy in $\mathrm{eV}=4.1 \times 10^{-19} / 1.6 \times 10^{-19}=2.6(\mathrm{eV})$ | B1 | expect 2.56 eV |
|  |  | ii | LED strikes at $2.6 \mathrm{~V} /$ only conducts above 2.6 V an electron must pass through a p.d. of 2.6 V to lose energy as a photon of blue light/AW. | M1 <br> A1 |  |
|  | c | i | $\begin{aligned} & \mathrm{n}=\mathrm{I} / \mathrm{e}=0.02 / 1.6 \times 10^{-19} \\ & =1.3 \times 10^{77} \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | expect $1.25 \times 10^{17}$ |
|  |  | ii | $\begin{aligned} & \text { energy/s }=1.25 \times 10^{17} \times 4.1 \times 10^{-19} \text { or } 2.6 \mathrm{~V} \times 0.020 \mathrm{~A} \\ & =0.051 \text { to } 0.053\left(\mathrm{~J} \mathrm{~s}^{-1}\right) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | ecf (c)(i); NOT $4.0 \times 0.020$ answer is 0.053 using $1.3 \times 10^{17}$ |
|  |  | iii | $\begin{aligned} & \text { efficiency }=0.052 /\left(4.0 \times 20 \times 10^{-3}\right) \\ & =0.64 \end{aligned}$ | $\begin{aligned} & \hline \text { C1 } \\ & \text { A1 } \end{aligned}$ | ```ecf (c)(ii) accept }\mp@subsup{V}{\mathrm{ strike }}{}/\mp@subsup{V}{\mathrm{ operate }}{}=2.6/4.0 or any other correct (P or W out)/ (P or W in) calculation accept 64 %``` |
|  | d |  | shape similar to the curve drawn leaving x -axis at close to 2.0 V and passing through $(3.4,20)$ | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | Within half a square |
|  |  |  | Total | 15 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | a |  | constant phase difference/relationship (between the waves) or always at $\pi$ radians $/ 180^{\circ}$ <br> or because they are generated by the same source/AW | B1 | allow fixed NOT same |
|  | b |  | (for a minimum) the two oscillations/amplitudes add in antiphase/ are $\pi$ (rad) out of phase/completely out of phase there is a resultant amplitude (of $2.0 \mu \mathrm{~m}$ ) so a sound will still be heard | B1 <br> B1 | for zero intensity the two oscillations must have equal amplitudes/AW <br> and be in antiphase allow the word waves for oscillations |
|  | C |  | $\begin{aligned} & \text { B } \pi / 2 \text { radians } / 90^{\circ} \\ & \text { C } 3 \pi / 4 \text { radians } / 135^{\circ} \end{aligned}$ | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | max 1 out of 2 marks if unit omitted |
|  | d | i | $\begin{aligned} & f=10^{3} / 0.8=1.25 \mathrm{kHz} \text { or } \mathrm{T}=0.8 \times 10^{-3} \mathrm{~s} \\ & \lambda=\mathrm{v} / \mathrm{f} \text { or } \mathrm{vT}=340 \times 0.8 \times 10^{-3} \\ & \lambda=0.27 \mathrm{~m} \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | if T value from graph incorrect ecf with max 2/3 |
|  |  | ii | $\begin{aligned} & \text { select } \lambda=a x / D \\ & D=0.4 \times 4.8 / 0.27 \\ & D=7.1(\mathrm{~m}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | ecf (d)(i) <br> expect 7.06 m if using $\lambda=0.272 \mathrm{~m}$ <br> 3.5 m or 3.6 m scores 2 marks |
|  | e | i | energy per unit time/power per unit area (perpendicular to the direction of energy transfer) | B1 | accept per second as a special case |
|  |  | ii | $\begin{aligned} & \text { ratio of amplitudes }=3 \\ & \text { intensity is proportional to (amplitude) } \\ & \text { ratio of intensities }=9 \text { so intensity at } \mathrm{O}=4.0 \times 10^{-6} \times 9 \\ & I=3.6 \times 10^{-5}\left(\mathrm{~W} \mathrm{~m}^{-2}\right) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | or A at $\mathbf{P}=2.0 \mu \mathrm{~m}$ and A at $\mathbf{O}=6.0 \mu \mathrm{~m}$ clearly stated allow $\mathrm{I} \alpha \mathrm{A}^{2}$ i.e. symbols only |
|  |  |  | Total | 15 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | a |  | ```all travel at speed of light through a vacuum are oscillating E and B fields or are caused by accelerating charges/AW``` | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | max 2 marks from 3 marking points if 3 properties are given withhold one mark for each incorrect property so 2 correct and 1 incorrect would score 1 mark ; 1 correct and 2 incorrect would score zero, etc |
|  | b | i | oscillations (of particles/e-m fields along the wave) are in one direction only perpendicular to the direction of wave propagation/of travel of the wave/of energy transfer | B1 <br> B1 |  |
|  |  | ii | light passing through polariser 1 is vertically polarised/ only vertical oscillations of the light exist beyond the polariser 1/AW <br> only (the component of) light in the horizontal plane can pass through polariser 2 so no light reaches the eye | B1 B1 | allow any words indicating vertical, e.g. up and down; for horizontal, e.g. at $90^{\circ}$ to vertical or crossed polarisers accept using Malus' law $I_{\text {trans }}=I_{\text {incident }} \cos ^{2} \theta$ with $\theta=90^{\circ}$ gives $I_{\text {trans }}=0$ |
|  |  | iii | after polariser 1 the component of the vertically polarised light at $45^{\circ}$ passes through polariser 3 <br> the polarised light beyond polariser 3 has a component at $45^{\circ}$ which passes through polariser 2 so light reaches the eye <br> or mark a typical answer of the form (max 2) as follows some of the vertically polarised light passes through polariser 3 and some of this passes through polariser 2 because in each case the polarised light is not at right angles to the transmission axis of the polariser | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \end{aligned}$ | QWC statement to the effect that component of light along polarising axis of filter is transmitted <br> accept using Malus' law $I_{\text {trans }}=I_{\text {incident }} \cos ^{2} \theta$ with $\theta=45^{\circ}$ gives $I_{\text {trans }}=I_{\text {incident }} / 2$ <br> same process gives $I_{\text {trans }}=I_{\text {incident }} / 2$ again so $1 / 4$ of light after polariser 1 reaches eye (assuming no absorption) <br> accept answers in terms of amplitudes rather than intensities, i.e. $A=A_{0} \cos \theta$, etc. |
|  |  |  | Total | 9 |  |

| Question |  | Answer | Marks | Guidance |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{7}$ | a |  | (micro)waves are reflected (at the metal walls) <br> reflected waves interfere/superpose with the incident waves <br> to produce nodes and antinodes ( - a stationary wave pattern) | B1 <br> B1 <br> B1 | allow points of constructive and destructive <br> interference |
|  | b |  | X are the points of maximum energy/intensity/amplitude <br> so are antinodes | M1 <br> A1 | allow displacement in this case |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 8 | a | i | energy $\varphi$ required for an electron to escape from metal surface the minimum energy........ | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | inclusion of the word minimum in the sentence scores the second mark |
|  |  | ii | ```a photon with less than the threshold frequency focannot cause electron emission/AW so work function = h (threshold frequency)``` | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | allow $\varphi={h f_{0}}$ when the symbols $\varphi$ and $f_{0}$ have been defined somewhere in the question |
|  |  | iii | $\begin{aligned} & \varphi=\mathrm{hc} / \lambda \\ & =6.63 \times 10^{-34} \times 3.0 \times 10^{8} / 550 \times 10^{-9} \\ & =3.6 \times 10^{-19}(\mathrm{~J}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ |  |
|  | b | i | $\begin{aligned} & \mathrm{KE}_{\max }=\mathrm{hf}-\varphi \text { or } \mathrm{hf}=\varphi+\mathrm{KE}_{\max } \\ & \mathrm{hf}=6.63 \times 10^{-34} \times 3.0 \times 10^{8} / 440 \times 10^{-9}=4.5 \times 10^{-19} \mathrm{~J} \\ & 1 / 2 \mathrm{mv} \mathrm{~J}^{2}=9 \times 10^{-20} \mathrm{giving}^{2}=1.8 \times 10^{-19} / 9.1 \times 10^{-31} \\ & \mathrm{v}=4.45 \times 10^{5}\left(\mathrm{~m} \mathrm{~s}^{-1}\right) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { A0 } \end{aligned}$ | $\begin{aligned} & \text { ecf (a)(iii) } \\ & \text { allow } 4.5 \text { or } 4.4 \times 10^{5} \end{aligned}$ |
|  |  | ii | $\begin{aligned} & \lambda=\mathrm{h} / \mathrm{mv}=6.63 \times 10^{-34} / 9.1 \times 10^{-31} \times 4.5 \times 10^{5} \\ & \lambda=1.6 \times 10^{-9}(\mathrm{~m}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | allow $1.7 \times 10^{-9}$ for $v=4.4 \times 10^{5}$ |
|  | C | i | $\mathrm{n}=3$ to $\mathrm{n}=2$ | B1 | allow between or and when there is a downward arrow on Fig. 8.1 |
|  |  | ii | $\begin{aligned} & \mathrm{E}_{32}+\mathrm{E}_{21}=\mathrm{E}_{31} \\ & \mathrm{hc} / \lambda_{32}+\mathrm{hc} / \lambda_{21}=\mathrm{hc} / \lambda_{31} \\ & 1 / 590+1 / 440=1 / 252 \text { so } \lambda_{31}=250 \times 10^{-9}(\mathrm{~m}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | accept equation using $1 / \lambda$ or $1 / 590+1 / 440=1 / \lambda_{31}$ allow 2 or 3 sf allow $2 / 3$ for using 550 for 590 nm giving 244 nm |
