## Mark Scheme for June 2015

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

## Annotations

Available in Scoris

| Annotation | Meaning |
| :---: | :---: |
| BOD | Benefit of doubt given |
| CON | Contradiction |
| $*$ | Incorrect response |
| ECF | Error carried forward |
| FT | Follow through |
| NAQ | Not answered question |
| NBOD | Benefit of doubt not given |
| POT | Power of 10 error |
| $\wedge$ | Omission mark |
| RE | Rounding error or repeat error |
| SF | Error in number of significant figures |
| - | Correct response |
| AE | Arithmetic error |
| $?$ | Wrong physics or equation |

The abbreviations, annotations and conventions used in the detailed Mark Scheme are:

| Annotation | Meaning |
| :---: | :--- |
| $/$ | Alternative and acceptable answers for the same marking point |
| $(1)$ | Separates marking points |
| reject | Answers which are not worthy of credit |
| not | Answers which are not worthy of credit |
| IGNORE | Statements which are irrelevant |
| ALLOW | Answers that can be accepted |
| () | Words which are not essential to gain credit |
| - | Underlined words must be present in answer to score a mark |
| ecf | Error carried forward |
| AW | Alternative wording |
| ORA | Or reverse argument |

## Subject-specific Marking Instructions

## CATEGORISATION OF MARKS

The marking scheme categorises marks on the MABC scheme
B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks: $\quad$ These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular M-mark, then none of the dependent Amarks can be scored.

C marks:

A marks:

These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a Cmark and the candidate does not write down the actual equation but does correct working which shows that the candidate knew the equation, then the $\mathbf{C}$-mark is given. These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

## Note about significant figures:

If the data given in a question is to 2 SF , then allow answers to 2 or more SF.
If an answer is given to fewer than 2 SF , then penalise once only in the entire paper. N.B. Also penalise RE only once per paper.
Any exception to this rule will be mentioned in the Guidance.
A tick should be placed in the body of the script at the point where each mark is awarded.

| Question |  |  | Answer | M | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | a | i | $\begin{aligned} & \mathrm{P}=\mathrm{V}^{2} / \mathrm{R}=230^{2} / \mathrm{R}=1500 \\ & \mathrm{R}=35.3 \Omega \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | accept I $=\mathrm{P} / \mathrm{V}=6.52 \mathrm{~A}$ and $\mathrm{R}=230 / 6.52$ <br> allow $52900 / 1500=35 \Omega$, i.e. some working shown |
|  |  | ii | $\begin{aligned} & \text { use of } \rho=R A / I \text { or } R=\rho I / A \\ & I=35 \times 7.8 \times 10^{-8} / 1.1 \times 10^{-6} \\ & I=2.5(\mathrm{~m}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \\ & \hline \end{aligned}$ | formula correct substitution answer (2.48) |
|  | b |  | resistors and motor wired in parallel to supply switches correctly placed (open or closed) any suitably labelled symbols; components in correct order | $\begin{aligned} & \text { B1 } \\ & \text { M1 } \\ & \text { A1 } \end{aligned}$ | do not expect switches to be labelled |
|  | c | i | power is inversely proportional resistance (for same V ) <br> resistance of wire is inversely proportional to c-s area/diameter squared (as I and $\rho$ are fixed/same) | B1 B1 | accept: (same V so for) larger/smaller power need (larger/smaller I and so) smaller/larger resistance accept smaller c-s area/diameter (of wire) causes larger resistance or vice versa |
|  |  | ii | $\begin{array}{ll} \text { P } \alpha A & \text { (because } \left.P=V^{2} / R=V^{2} \mathrm{~A} / \rho \mathrm{l}\right) \\ \text { or } \mathrm{P} \alpha \mathrm{~d}^{2} & \left(\text { because } \mathrm{A}=\pi \mathrm{d}^{2} / 4\right) \\ 1.0 / 1.5=(\mathrm{d} / \mathrm{D})^{2}=2 / 3 \\ \text { so } d=0.82 \mathrm{D} & \\ \hline \end{array}$ | B1 <br> M1 A1 | accept $\mathrm{R}_{1000}=52.9 \Omega$ and $\mathrm{R} \alpha 1 / \mathrm{A}$ [ where $A_{d}=5.2 \times 10^{-8} \& A_{D}=7.8 \times 10^{-8}$ ] so $35.3 / 52.9=\left[(d / D)^{2}\right.$ or $\left.A_{d} / A_{D}\right]=2 / 3$ <br> $\left[\right.$ where $\mathrm{d}=2.57 \times 10^{-4} \& \mathrm{D}=3.15 \times 10^{-4}$ ] |

| Question |  | Answer | M | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| d |  | total current in circuit $=2600 / 230=11.3 \mathrm{~A}$ so 13 A fuse required | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \end{aligned}$ | accept I $=2500 / 230=10.9 \mathrm{~A}$ |
| e | i | (a unit of) energy equal to 3.6 MJ or 1 kW for $1 \mathrm{~h} / \mathrm{AW}$ | B1 | e.g. 1000 W for 3600 s or similar; NOT 1 kW per hour |
|  | ii | $\begin{aligned} & 1.6 \times 4 \times 18 \\ & 115(\mathrm{p}) \end{aligned}$ | $\begin{aligned} & \hline \text { C1 } \\ & \text { A1 } \end{aligned}$ | allow 1 mark for 108 p; i.e. using $1.5 \times 4 \times 18$ or 1 mark for 79 p ; i.e. using $1.1 \times 4 \times 18$ NOT 72 p |
|  |  | Total question 1 | 18 |  |

| Question |  |  | Answer | M | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 |  |  |  |  |  |
|  | a |  | for $\mathrm{R}_{1}$ <br> for $\mathrm{R}_{2}$ | B1 B1 |  |
|  | b | i | $500 \Omega$ | B1 | accept $\pm 20 \Omega$ |
|  |  | ii | 7.0 = I x 500; I 0.014 (A) | B1 | ecf b(i) |
|  |  | iii | $\begin{aligned} & \begin{array}{l} 5.0=0.014 \times R \quad \text { or } \\ R=360 \Omega \end{array} \quad 12=0.014(500+\mathrm{R}) \\ & \hline \end{aligned}$ | $\begin{aligned} & \mathrm{M} 1 \\ & \text { A1 } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { ecf b(i)(ii) } \\ & \text { allow } R=500 \times 5 / 7=360 \Omega \end{aligned}$ |
|  |  | iv | $\begin{aligned} & \text { (at } \left.200^{\circ} \mathrm{C}\right) \mathrm{R}_{\text {th }}=250 \Omega \\ & \mathrm{~V} \text { across thermistor }=12 \times 250 /(250+350)=5.0 \mathrm{~V} \\ & \text { alt } 5.0=12 \times \mathrm{R} /(\mathrm{R}+350) \\ & \text { or } I=7.0 / 350=0.02 \mathrm{~A} ; \mathrm{V}_{\text {th }}=5.0=0.02 \times \mathrm{R} \\ & \mathrm{R}=250 \Omega \text { which occurs at } 200^{\circ} \mathrm{C} \end{aligned}$ | $\begin{aligned} & \mathrm{B} 1 \\ & \mathrm{~B} 1 \end{aligned}$ | allow $\mathrm{R}_{\mathrm{th}}=250 \pm 10$ giving 4.8 to 5.1 V expect 350 or 360 ; allow 1 SF where answer is 5.0 NOT $250 \times 0.02=5.0 \mathrm{~V}$; 0.02 A must be justified allow $7.0=12 \times 350 /(350+\mathrm{R})$ |
|  | C |  | switch on $5.0=12 \times 250 /(250+R)$ or $7.0=12 \times R /(250+R)$ giving $R=350 \Omega$ which is $190^{\circ} \mathrm{C}$ <br> switch off $7.0=12 \times 250 /(250+R)$ or $5.0=12 \times R /(250+R)$ giving $R=180 \Omega$ which is $210^{\circ} \mathrm{C}$ <br> or Switch on, R2 / R1 = 7/5 giving R2-250 x 7/5 = 350 ohm Switch off, R2 / R1 = 5/7 giving R2 $=250 \times 5 / 7=179 \mathrm{ohm}$ | $\begin{aligned} & \mathrm{M} 1 \\ & \mathrm{~A} 1 \\ & \mathrm{M} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | accept solution in 2 stages first calculating currents on $I=0.02$ and $R=7 / 0.02$ off $\mathrm{I}=0.028$ and $\mathrm{R}=5 / 0.028$ allow $\pm 5^{\circ} \mathrm{C}$ in reading from graph N.B. zero marks for correct temperatures quoted without some correct working/justification |
|  |  |  | Total question 2 | 12 |  |

\begin{tabular}{|c|c|c|c|c|c|}
\hline \multicolumn{3}{|r|}{Question} \& Answer \& M \& Guidance \\
\hline 5 \& \& \& \& \& \\
\hline \& a \& i \& when two (or more) waves meet/superpose/overlap (at a point) there is a change in overall displacement \& \[
\begin{aligned}
\& \text { M1 } \\
\& \text { A1 }
\end{aligned}
\] \& \begin{tabular}{l}
NOT interact,combine, join, connect, collide, hit, intersect, pass through, etc. \\
allow the resultant displacement equals the sum of the individual displacements
\end{tabular} \\
\hline \& \& ii \& constant phase difference/relationship (between the waves) \& B1 \& allow fixed not same \\
\hline \& b \& \& \[
\begin{aligned}
\& \lambda=c / f=3.0 \times 10^{8} / 1.0 \times 10^{10} \\
\& \lambda=3.0 \times 10^{-2} \text { so aerial length }=1.5 \times 10^{-2}(\mathrm{~m})
\end{aligned}
\] \& \[
\begin{aligned}
\& \mathrm{M} 1 \\
\& \mathrm{~A} 1 \\
\& \hline
\end{aligned}
\] \& accept \(1.5 \mathrm{c}(\mathrm{m})\) \\
\hline \& C \& 11

2 \& \begin{tabular}{l}
the path difference between the signals (from the two transmitters) changes (along OP) <br>
causing the detected signal to vary between maximum and minimum values/AW <br>
or when signals (at the point on OP) are in phase there is a maximum <br>
when ( $\pi$ ) out of phase there is a minimum
$$
x=\lambda D / a=3.0 \times 10^{-2} \times 4.0 / 0.20(=0.60)
$$ <br>
so distance $=x / 2=0.30(\mathrm{~m})$

 \& 

B1 B1 <br>
C1 A1

 \& 

give 1 mark out of 2 for maxima and minima occur (because of interference) <br>
ecf (b) 20 times answer to (b) <br>
allow 1 SF answer here
\end{tabular} <br>

\hline \& \& ii \& amplitude of signal decreases (inversely) with distance because energy emitted by the transmitters spreads out (so less is collected by the receiver the further away it is ) \& B1
B1 \& allow intensity; no mark if any suspicion of decrease being caused by interference effect accept any statement which conveys the idea of energy spreading correctly,e.g. I $\alpha 1 / d^{2}$ <br>

\hline \& \& iii \& when $\mathrm{AO}-\mathrm{BO}=\lambda / 2$ a minimum occurs/AW or phase difference of $\pi\left(180^{\circ}\right)$ between detected signals from $A$ and $B$ so distance $=\lambda / 2=1.5 \times 10^{-2}(\mathrm{~m})$ \& \[
$$
\begin{aligned}
& \text { B1 } \\
& \text { B1 } \\
& \hline
\end{aligned}
