# COMPONENT 2 - ELECTRICITY AND THE UNIVERSE 

## MARK SCHEME

## GENERAL INSTRUCTIONS

The mark scheme should be applied precisely and no departure made from it.

## Recording of marks

Examiners must mark in red ink.

One tick must equate to one mark (except for the extended response question).
Question totals should be written in the box at the end of the question.

Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.
Marking rules
All work should be seen to have been marked.
Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.
Crossed out responses not replaced should be marked.
Credit will be given for correct and relevant alternative responses which are not recorded in the mark scheme.

## Extended response question

A level of response mark scheme is used. Before applying the mark scheme please read through the whole answer from start to finish. Firstly, decide which level descriptor matches best with the candidate's response: remember that you should be considering the overall quality of the response. Then decide which mark to award within the level. Award the higher mark in the level if there is a good match with both the content statements and the communication statement.

Marking abbreviations
The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.
cao $=$ correct answer only
ecf $=$ error carried forward
bod $=$ benefit of doubt
