

Mark Scheme Projectiles Past Paper Questions

Jan 2002 to Jan 2009

8(a)(i) (use of $v^2 = u^2 + 2as$ gives) $0 = 25^2 - 2 \times 9.81 \times s$ ✓
 $19.6 s = 625$ and $s = 32 \text{ m}$ ✓

(ii) $t = \frac{25}{9.81} = 2.5 \text{ s}$ ✓

Q8 Jan 2002

(iii) (use of $v^2 = u^2 + 2as$ gives) $v^2 = 25^2 - 2 \times 9.81 \times 16$ ✓
 (allow C.E. from (a)(i))
 and $v = 18 \text{ m s}^{-1}$ ✓

max(4)

- (b) time to stop the ball is greater ✓
 \therefore rate of change of momentum is less ✓
 [or work done on ball is the same but greater distance ✓ \therefore less force ✓] (2)
(6)

Q6 Jun 2002

- 6(a) (rate of change of horizontal) displacement is constant ✓ hence (horizontal) velocity is constant ✓
 thus no (horizontal) force acting ✓ max(2)

- (b) there is a vertical force
 [or weight/force of gravity acting on ball] ✓ ball therefore accelerates (in vertical direction) ✓ acceleration is constant ✓ max(2)

- (c)(i) (horizontal) displacement would be less ✓

- (ii) (vertical) displacement or acceleration would be less ✓ effect would increase with time ✓
 [or air resistance increases with speed until equals weight ✓ hence reaches terminal velocity/speed ✓] (3)

(7)

6(a)(i) 70 m s^{-1} ✓

(a)(ii) $v = 9.81 \times 2.0$ ✓
 $= 20 \text{ m s}^{-1}$ ✓ (19.6 m s^{-1})

Q6 Jan 2003

(a)(iii) $v = \sqrt{(70^2 + 19.6^2)} = 73 \text{ m s}^{-1}$ ✓

direction: $\tan \theta = \frac{19.6}{70} = 0.28$

$\theta = 15.6^\circ$ ✓ ($\pm 0.1^\circ$) (to horizontal) ✓

(allow C.E. for values of v from (i) and (ii))

[or use of correct scale drawing]

(5)

(b)(i) air resistance is greater than weight ✓
 (hence) resultant force is upwards ✓
hence deceleration (Newton's second law) ✓

(b)(ii) air resistance decreases as speed decreases ✓
 weight equals air resistance (hence constant speed)
 (hence) resultant force is zero (Newton's first law) ✓

max(4)
(9)

1

(a)(i)

Q1 Jun 2004

- (ii) no **horizontal** force acting ✓
 (hence) no (horizontal) acceleration ✓
 [or correct application of Newton's First law] (3)

(b)(i) (use of $v^2 = u^2 + 2as$ gives) $32^2 = (0) + 2 \times 9.81 \times s$ ✓
 $s = \frac{1024}{19.62}$ ✓ (= 52.2 m)

(ii) (use of $s = \frac{1}{2}at^2$ gives) $52 = \frac{1}{2}9.81 \times t^2$ ✓
 $t = \sqrt{\left(\frac{104}{9.81}\right)} = 3.3 \text{ s}$ ✓ (3.26 s)

[or use of $v = u + at$ gives $32 = (0) + 9.81 \times t$ ✓
 $t = \frac{32}{9.81} = 3.3 \text{ s}$ ✓ (3.26 s)]

(iii) (use of $x = vt$ gives) $x (= QR) = 95 \times 3.26$ ✓
 $= 310 \text{ m}$ ✓
 (use of $t = 3.3$ gives $x = 313.5 \text{ m}$)
 (allow C.E. for value of t from (ii)) (6)

- (c) maximum height is greater ✓
 because vertical acceleration is less ✓
 [or longer to accelerate] (2)
(11)
