

Circular Motion Paper Questions Jan 2002—Jan 2010 (old spec)

- 2 (a) A particle that moves uniformly in a circular path is accelerating yet moving at a constant speed.

Explain this statement by reference to the physical principles involved.

(b)

Figure 2

A 0.10 kg mass is to be placed on a horizontal turntable that is then rotated at a fixed rate of 78 revolutions per minute. The mass may be placed on the table at any distance, r , from the axis of rotation, as shown in **Figure 2**.

If the maximum frictional force between the mass and the turntable is 0.50 N, calculate the maximum value of the distance r at which the mass would stay on the turntable at this rate of rotation.
