Q1.A positive ion has a charge-to-mass ratio of $2.40 \times 10^{7} \mathrm{C} \mathrm{kg}^{-1}$. It is held stationary in a vertical electric field. Which line, $\mathbf{A}$ to $\mathbf{D}$, in the table shows correctly both the strength and the direction of the electric field?

|  | Electric field strength $/$ <br> $\mathbf{V ~ m}^{-1}$ | Direction |
| :---: | :---: | :---: |
| A | $4.09 \times 10^{-7}$ | upwards |
| B | $4.09 \times 10^{-7}$ | downwards |
| C | $2.45 \times 10^{6}$ | upwards |
| D | $2.45 \times 10^{6}$ | downwards |

Q2.What are the numbers of hadrons, baryons and mesons in an atom of ${ }^{7} 3 \mathrm{Li}$ ?

|  | hadrons | baryons | mesons |  |
| :--- | :---: | :---: | :---: | :---: |
| A | 7 | 3 | 3 | $\square$ |
| B | 7 | 4 | 4 | $\square$ |
| C | 7 | 7 | 0 | $\square$ |
| D | 10 | 7 | 0 | $\square$ |

Q3.Electron capture can be represented by the following equation.

$$
p+e^{-} \rightarrow X+Y
$$

Which row correctly identifies $\mathbf{X}$ and $\mathbf{Y}$ ?

|  | $\mathbf{X}$ | $\mathbf{Y}$ |  |
| :--- | :---: | :---: | :---: |
| $\mathbf{A}$ | p | $\mathrm{K}^{-}$ | $\square$ |
| $\mathbf{B}$ | $\mathrm{e}^{-}$ | $\mathrm{e}^{+}$ | $\square$ |
| $\mathbf{C}$ | n | $\mathrm{V}_{\mathrm{e}}$ | $\square$ |
| $\mathbf{D}$ | n | $\pi^{0}$ | $\square$ |

Q4.A calcium ion is formed by removing two electrons from an atom of charge of the calcium ion?

A $\quad 3.2 \times 10^{-19} \mathrm{Ckg}^{-1}$

B $\quad 2.9 \times 10^{-18} \mathrm{C} \mathrm{kg}^{-1}$ $\square$

C $\quad 4.8 \times 10^{6} \mathrm{C} \mathrm{kg}^{-1}$ $\square$

D $\quad 4.8 \times 10^{7} \mathrm{Ckg}^{-1}$

Q5.Which of the following is not true?

A Each meson consists of a single quark and a single antiquark. $\square$

B Each baryon consists of three quarks.
C The magnitude of the charge on every quark is $\frac{1}{3}$
D A particle consisting of a single quark has not been observed.

Q6.A light source emits light which is a mixture of two wavelength, $\lambda_{1}$ and $\lambda_{2}$. When the light is incident on a diffraction grating it is found that the fifth order of light of wavelength $\lambda_{1}$ occurs at the same angle as the fourth order for light of wavelength $\lambda_{2}$. If $\lambda_{1}$ is 480 nm what is $\lambda_{2}$ ?

A $\quad 400 \mathrm{~nm}$ $\square$

B $\quad 480 \mathrm{~nm}$

C 600 nm $\square$

D $\quad 750 \mathrm{~nm}$

(Total 1 mark)

Q7.The nucleus of ${ }_{4}^{9} \mathrm{Be}$ captures a proton and emits an $\alpha$ particle. What is the product nucleus?
A $\quad{ }_{6}^{10} \mathrm{C}$ $\square$
B $\quad{ }_{3}^{7} \mathrm{Li} \quad \square$
C ${ }_{3}^{6} \mathrm{Li}$

D $\quad{ }_{2}^{6} \mathrm{He} \quad \bigcirc$

Q8. When comparing X-rays with UV radiation, which statement is correct?

A $X$-rays have a lower frequency.

B $\quad$ X-rays travel faster in a vacuum.

C X-rays do not show diffraction and interference effects.

D Using the same element, photoelectrons emitted using X -rays have the greater maximum kinetic energy.
(Total 1 mark)

Q9.Monochromatic light of wavelength 490 nm falls normally on a diffraction grating that has $6 \times 10^{5}$ lines per metre. Which one of the following is correct?

A The first order is observed at angle of diffraction of $17^{\circ}$. $\square$
B The second order is observed at angle of diffraction of $34^{\circ}$.
C The third and higher orders are not produced.

D A grating with more lines per metre could produce more orders.

## Page 5

Q10.An electron collides with a neutral atom and ionizes it. Which of the following describes the particles present after the collision?

A An electron and an excited atom.
B An excited atom containing an excess electron.
C Two electrons and a positive ion.

D Two electrons and a neutral atom in the ground state.
(Total 1 mark)

Q11.A radioactive nucleus emits a $\beta$ - particle then an $\alpha$ particle and finally another $\beta$. particle. The final nuclide is

A an isotope of the original element
$\bigcirc$

B the same element with a different proton number

C a new element of higher proton number

D a new element of lower nucleon number

Q12.Interference maxima produced by a double source are observed at a distance of 1.0 m from the sources. In which one of the following cases are the maxima closest together?

A red light of wavelength 700 nm from sources 4.0 mm apart
B sound waves of wavelength 20 mm from sources 50 mm apart
C blue light of wavelength 450 nm from sources 2.0 mm apart
D surface water waves of wavelength 10 mm from sources 200 mm apart

Q13.The diagram shows a microwave transmitter T which directs microwaves of wavelength eat two slits $\mathrm{S}_{1}$ and $\mathrm{S}_{2}$ formed by metal plates. The microwaves that pass through the two slits are detected by a receiver.

receiver
at 0

When the receiver is moved to P from O , which is equidistant from $\mathrm{S}_{1}$ and $\mathrm{S}_{2}$, the signal received decreases from a maximum to a minimum. Which one of the following statements is a correct deduction from this observation?

A The path difference $\mathrm{S}_{1} \mathrm{O}-\mathrm{S}_{2} \mathrm{O}=0.5 \lambda$

B The path difference $\mathrm{S}_{1} \mathrm{O}-\mathrm{S}_{2} \mathrm{O}=\boldsymbol{\lambda}$

C The path difference $\mathrm{S}_{1} \mathrm{P}-\mathrm{S}_{2} \mathrm{P}=0.5 \lambda$

D The path difference $\mathrm{S}_{1} \mathrm{P}-\mathrm{S}_{2} \mathrm{P}=\lambda$

Q14.

Point sources of sound of the same frequency are placed at $\mathrm{S}_{1}$ and $\mathrm{S}_{2}$. When a sound detector is slowly moved along the line PQ, consecutive maxima of sound intensity are detected at $W$ and $Y$ and consecutive minima at X and Z . Which one of the following is a correct expression for the wavelength of the sound?

A $\mathrm{S}_{1} \mathrm{X}-\mathrm{S}_{1} \mathrm{~W}$
B $\quad S_{1} Y-S_{1} X$
C $\mathrm{s}_{1} \mathrm{X}-\mathrm{s}_{2} \mathrm{X}$
D $\mathrm{S}_{1} \mathrm{Y}-\mathrm{S}_{2} \mathrm{Y}$
(Total 1 mark)

Q15.In a Young's double slit interference experiment, monochromatic light placed behind a single slit illuminates two narrow slits and the interference pattern is observed on a screen placed some distance away from the slits. Which one of the following decreases the separation of the fringes?

A increasing the width of the single slit
B decreasing the separation of the double slits
C increasing the distance between the double slits and the screen
D using monochromatic light of higher frequency
(Total 1 mark)

Q16. Interference fringes, produced by monochromatic light, are viewed on a screen placed a distance $D$ from a double slit system with slit separation $s$. The distance between the centres of two adjacent fringes (the fringe separation) is $w$. If both $s$ and $D$ are doubled, what will be the new fringe separation?

A $\frac{w}{4}$
B $w$
C $2 w$
D $4 w$
(Total 1 mark)

Q17.Artificial radioactive nuclides are manufactured by placing naturally-occurring nuclides in a nuclear reactor. They are made radioactive in the reactor as a consequence of bombardment by

A $\quad \alpha$ particles.
B $\quad \beta$ particles.
C protons.
D neutrons.

Q18.

Coherent monochromatic light of wavelength $\lambda$ emerges from the slits $X$ and $Y$ to form dark fringes at $P, Q, R$ and $S$ in a double slit apparatus. Which one of the following statements is true?

A When the distance $D$ is increased, the separation of the fringes increases.

B When the distance between X and Y is increased, the separation of the fringes increases.
C When the width of the slit T is decreased, the separation of the fringes decreases.
D There is a dark fringe at P because $(\mathrm{YP}-\mathrm{XP})$ is $2 \lambda$.

Q19.In a double slit interference arrangement the fringe spacing is $w$ when the wavelength of the radiation is $\lambda$, the distance between the double slits is $S$ and the distance between the slits and the plane of the observed fringes is $D$. In which one of the following cases would the fringe spacing also be $w$ ?

|  | wave length | distance between <br> slits | distance between <br> slits and fringes |
| :---: | :---: | :---: | :---: |
| A | $2 \lambda$ | $2 s$ | $2 D$ |
| B | $2 \lambda$ | $4 s$ | $2 D$ |
| C | $2 \lambda$ | $2 s$ | $4 D$ |
| D | $4 \lambda$ | $2 s$ | $2 D$ |

(Total 1 mark)

Q20.

A double slit interference experiment is performed using monochromatic light of wavelength $\lambda$. The centre of the observed pattern is a bright fringe. What is the path difference between two waves which interfere to give the third dark fringe from the centre?

A $0.5 \lambda$
B $\quad 1.5 \lambda$

C $2.5 \lambda$
D $\quad 3.5 \lambda$

Q21.In a Young's double slits interference arrangement the fringe separation is $s$ when the wavelength of the radiation is $\lambda$, the slit separation $w$ and the distance between the slits and the plane of the observed fringes $D$. In which one of the following cases would the fringe separation also be $s$ ?

|  | wavelength | slit separation | distance between <br> slits and fringes |
| :--- | :---: | :---: | :---: |
| A | $2 \lambda$ | $2 w$ | $2 D$ |
| B | $2 \lambda$ | $4 w$ | $2 D$ |
| C | $2 \lambda$ | $2 w$ | $4 D$ |
| D | $4 \lambda$ | $2 w$ | $2 D$ |

(Total 1 mark)

Q22.Young's two slit interference pattern with red light of wavelength $7.0 \times 10^{-7} \mathrm{~m}$ gives a fringe separation of 2.0 mm .

What separation, in mm , would be observed at the same place using blue light of wavelength $45 \times 10^{-7} \mathrm{~m}$ ?

A 0.65
B 1.3
C 2.6
D 3.1

Q23. In a nuclear reaction ${ }_{7}^{14} \mathrm{~N}$ is bombarded by neutrons. This results in the capture of one neutron and the emission of one proton by one nucleus of ${ }_{7}^{14} \mathrm{~N}$. The resulting nucleus is

A ${ }_{7}^{13} \mathrm{~N}$
B $\quad{ }_{6}^{14} \mathrm{C}$
C $\quad{ }_{6}^{12} \mathrm{C}$
D $\quad{ }_{8}^{14} \mathrm{O}$
(Total 1 mark)

Q24.The diagram represents the experimental arrangement used to produce interference fringes in Young's double slit experiment.

The spacing of the fringes on the screen will increase if

A the width of the single slit is increased
B the distance $\mathbf{X Y}$ between the two slits is increased
C a light source of lower frequency is used
D the distance between the single and double slits is decreased
