1. A ray of light is incident on the internal boundary of a rectangular glass block in air.

Part of the light refracts out of the block at an angle of $30^{\circ}$.
Some of the remaining light reflects within the block to become incident on the right-hand boundary. refractive index of glass $=1.48$

## not to scale

What is the angle of incidence of the ray at the right-hand boundary?

A $20^{\circ}$

B $42^{\circ}$

C $48^{\circ}$

D $70^{\circ}$
2. In a Young's double-slit experiment, monochromatic light is incident on two narrow slits and the resulting interference pattern is observed on a screen.

Which change decreases the fringe separation?

A decreasing the separation between the two slits

B increasing the distance between the slits and the screen $\square$
C using monochromatic light of higher frequency $\square$

D using monochromatic light of longer wavelength $\square$
3. A diffraction grating is illuminated normally.

The second-order maximum for light of wavelength 650 nm occurs at the same angle as the third-order maximum for light of wavelength $\lambda$.

What is $\lambda$ ?

A 217 nm

B 325 nm $\bigcirc$

C 433 nm

D 975 nm $\bigcirc$
4. Light of wavelength $\lambda$ is incident normally on two parallel slits of separation $s$. Fringes of spacing $w$ are seen on a screen at a distance $D$ from the slits.

Which row gives another arrangement that produces a fringe spacing of $w$ ?

|  | Wavelength | Slit separation | Distance between <br> slits and screen |
| :---: | :---: | :---: | :---: |
| A | $2 \lambda$ | $2 s$ | $2 D$ |
| B | $2 \lambda$ | $4 s$ | $2 D$ |
| C | $2 \lambda$ | $2 s$ | $4 D$ |
| D | $4 \lambda$ | $2 s$ | $2 D$ |

(Total 1 mark)
5. A narrow beam of monochromatic light is incident normally to a diffraction grating. The first-order diffracted beam makes an angle of $20^{\circ}$ with the normal to the grating.

What is the highest order visible with this grating at this wavelength?

A 2 $\square$

B 3

C 4

D 5
$\bigcirc$
(Total
6. The speed of light decreases by $40 \%$ when it travels from air into a transparent medium. What is the refractive index of the medium?

A 0.6 $\square$

B 1.4

C 1.7

D 2.5 $\bigcirc$
(Total 1 mark)
7. A monochromatic light wave travels from glass into air.

Which row shows what happens to the wavelength, speed and photon energy?

|  | Wavelength | Speed | Photon energy |
| :---: | :---: | :---: | :---: |
| A | increases | increases | increases |
| B | does not change | decreases | does not change |
| C | does not change | decreases | increases |
| D | increases | increases | does not change | |  |
| :---: |

(Total 1 mark)
8. Monochromatic light is incident normally on a diffraction grating that has $4.50 \times 10^{5}$ lines $\mathrm{m}^{-1}$.

The angle between the second-order diffraction maxima is $44^{\circ}$.
What is the wavelength of the light?

A $\quad 208 \mathrm{~nm}$

B $\quad 416 \mathrm{~nm}$

C $\quad 772 \mathrm{~nm}$

D $\quad 832 \mathrm{~nm}$

(Total 1 mark)
9. In a Young's double-slit experiment, the spacing of the double slits is $s$ and the distance between the slits and the screen on which fringes are formed is $D$. When monochromatic light of wavelength $\lambda$ is incident on the slits the distance between adjacent fringes on the screen is $w$. Which row shows another arrangement that produces a fringe spacing of $w$ ?

|  | Spacing of <br> double slits | Distance between the slits and <br> the screen | Wavelength <br> of the light |
| :---: | :---: | :---: | :---: |
| A | $4 s$ | $2 D$ | $2 \lambda$ | 

(Total 1 mark)
10. Monochromatic electromagnetic radiation of wavelength $5.8 \times 10^{-7} \mathrm{~m}$ is incident normally on a diffraction grating with $3.0 \times 10^{5}$ lines per metre.

What is the highest order maximum produced?

A 5

B 6

C 10

D 13

(Total 1 mark)
11. Which characteristics of monochromatic light change when the light passes from air into glass?

A Speed, wavelength and frequency.

B Speed and frequency only.

C Speed and wavelength only. $\square$

D Wavelength and frequency only.
12. Which is a description of the pattern produced when monochromatic light passes through a very narrow slit?

A A series of equally-spaced light and dark fringes.

B A narrow central maximum with wider side fringes.

C A few bright fringes that are widely spaced.

D A wide central maximum with narrower side fringes.
13. A ray of light is incident on a glass-air boundary of a rectangular block as shown.

The refractive index of this glass is 1.5
The refractive index of air is 1.0
The angle of incidence of the light at the first glass-air boundary is $44^{\circ}$
What is the path of the ray of light?

A 0
B 0
C 0
D $\quad \bigcirc$
14. Rays of light are incident at the same angle $\theta$ on the core-cladding boundary of optical fibres $\mathbf{P}$ and $\mathbf{Q}$.
The cores of $\mathbf{P}$ and $\mathbf{Q}$ have the same refractive index $n$.
$\mathbf{P}$ and $\mathbf{Q}$ are the same length $L$.
The core diameter of $\mathbf{P}$ is half that of $\mathbf{Q}$.

The time for the ray to travel along optical fibre $\mathbf{P}$ is

$$
\frac{n L}{c \sin \theta}
$$

where $c$ is the speed of light in a vacuum.
What is the time for the ray to travel along optical fibre $\mathbf{Q}$ ?

A $\frac{n L}{c \sin \theta}$

B $\frac{n L}{2 c \sin \theta}$

C $\frac{2 n L}{c \sin \theta}$

D $\frac{4 n L}{c \sin \theta}$

15. A diffraction grating is illuminated normally with light of wavelength $6.5 \times 10^{-7} \mathrm{~m}$

When a screen is 1.5 m from the grating, the distance between the zero and first-order maxima on the screen is 0.30 m

What is the number of lines per mm of the diffraction grating?

A $3.3 \times 10^{-6}$

B $3.3 \times 10^{-3}$

C $3.0 \times 10^{2}$

D $3.0 \times 10^{5}$

(Total 1 mark)
16. In the diagram, $\mathbf{P}$ is the source of a wave of frequency 50 Hz

The wave travels to $\mathbf{R}$ by two routes, $\mathbf{P} \rightarrow \mathbf{Q} \rightarrow \mathbf{R}$ and $\mathbf{P} \rightarrow \mathbf{R}$. The speed of the wave is $30 \mathrm{~m} \mathrm{~s}-1$

What is the path difference between the two waves at $\mathbf{R}$ in terms of the wavelength $\lambda$ of the waves?

A $4.8 \lambda$

B $8.0 \lambda$

C $13.3 \lambda$

D $20.0 \lambda$ $\square$
17. An electromagnetic wave enters a fibre-optic cable from air. On entering the cable, the wave slows down to three-fifths of its original speed.

What is the refractive index of the core of the fibre-optic cable?

A 0.67

B 1.33

C 1.50

D 1.67

(Total 1 mark)
18. A diffraction grating has 500 lines per mm. When monochromatic light is incident normally on the grating the third-order spectral line is formed at an angle of $60^{\circ}$ from the normal to the grating.

What is the wavelength of the monochromatic light?

A 220 nm

B 580 nm

C 960 nm

D 1700 nm

19. The diagram shows a ray of light travelling in air and incident on a glass block of refractive index 1.5

What is the angle of refraction in the glass?

A $22.5^{\circ}$

B $23.3^{\circ}$

C $33.1^{\circ}$ 0

D $59.4^{\circ}$ 0
20. When light of wavelength $5.0 \times 10^{-7} \mathrm{~m}$ is incident normally on a diffraction grating the fourth-order maximum is observed at an angle of $30^{\circ}$.

What is the number of lines per mm on the diffraction grating?
A $\quad 2.5 \times 10^{2}$
0
B $\quad 2.5 \times 10^{5}$
0
C $\quad 1.0 \times 10^{3}$
0
D $\quad 1.0 \times 10^{6}$
0
