Q1. A planet of mass $M$ and radius $R$ rotates so rapidly that loose material at the equator only just remains on the surface. What is the period of rotation of the planet?
$G$ is the universal gravitational constant.
A $\quad 2 \pi \sqrt{\frac{R}{G M}}$
B $\quad 2 \pi \sqrt{\frac{R^{2}}{G M}}$
c $2 \pi \sqrt{\frac{G M}{R^{3}}}$
D $\quad 2 \pi \sqrt{\frac{R^{3}}{G M}}$
(Total 1 mark)

Q2. The radius of a certain planet is $x$ times the radius of the Earth and its surface gravitational field strength is $y$ times that of the Earth.

Which one of the following gives the ratio $\left(\frac{\text { massof the planet }}{\text { mass of the Earth }}\right)$ ?
A $x y$
B $x^{2} y$
C $x y^{2}$
D $x^{2} y^{2}$
(Total 1 mark)

Page 2

Q3. Which one of the following could be a unit of gravitational potential?
A N
B J
C $\quad \mathrm{Nkg}^{-1}$
D $\quad \mathrm{Jkg}^{-1}$
(Total 1 mark)

Q4. Which one of the following graphs correctly shows the relationship between the gravitational force, $F$, between two masses and their separation $r$.

A

B

C

D
(Total 1 mark)

Q5. When at the surface of the Earth, a satellite has weight $W$ and gravitational potential energy $-U$. It is projected into a circular orbit whose radius is equal to twice the radius of the Earth. Which line, A to D, in the table shows correctly what happens to the weight of the satellite and to its gravitational potential energy?

|  | weight | gravitational potential energy |
| :---: | :---: | :---: |
| A | becomes $\frac{W}{2}$ | $U$ |
| B | becomes $\frac{W}{4}$ | increases by $\frac{U}{2}$ |
| C | remains $W$ | increases by $U$ |
| D | becomes $\frac{W}{4}$ | increases by $U$ |

Q6. Two protons are $1.0 \times 10^{-14} \mathrm{~m}$ apart. Approximately how many times is the electrostatic force between them greater than the gravitational force between them?

A $10^{23}$

B $10^{30}$

C $10^{36}$

D $10^{42}$
(Total 1 mark)

Q7. The diagram shows two positions, $\mathbf{X}$ and $\mathbf{Y}$, at different heights on the surface of the Earth.

Which line, $\mathbf{A}$ to $\mathbf{D}$, in the table gives correct comparisons at $\mathbf{X}$ and $\mathbf{Y}$ for gravitational potential and angular velocity?

|  | gravitational potential at $\mathbf{X}$ <br> compared with $Y$ | angular velocity at X compared <br> with $\mathbf{Y}$ |
| :---: | :---: | :---: |
| A | greater | greater |
| B | greater | same |
| C | greater | smaller |
| D | same | same |

(Total 1 mark)

Q8. A projectile moves in a gravitational field. Which one of the following is a correct statement for the gravitational force acting on the projectile?

A The force is in the direction of the field.
B The force is in the opposite direction to that of the field.
C The force is at right angles to the field.
D The force is at an angle between $0^{\circ}$ and $90^{\circ}$ to the field.

## Page 5

Q9. The Earth has density $\rho$ and radius $R$. The gravitational field strength at the surface is $g$. What is the gravitational field strength at the surface of a planet of density $2 \rho$ and radius $2 R$ ?

A $g$
B $\quad 2 g$
C $\quad 4 g$
D $\quad 16 \mathrm{~g}$
(Total 1 mark)

Q10. Two protons, each of mass $m$ and charge $e$, are a distance $d$ apart. Which one of the following expressions correctly gives the ratio $\left(\frac{\text { electrostatic force }}{\text { gravitational force }}\right)$ for the forces acting between them?

A $\frac{4 \pi \varepsilon_{0} e^{2}}{G m^{2}}$
B $\frac{G e^{2}}{4 \pi \varepsilon_{0} m^{2}}$

C $\frac{e^{2} m^{2}}{4 \pi \varepsilon_{0} G}$
D $\frac{e^{2}}{4 \pi \varepsilon_{0} G m^{2}}$

Q11. The graph shows how the gravitational potential, $V$, varies with the distance, $r$, from the centre of the Earth.

What does the gradient of the graph at any point represent?
A the magnitude of the gravitational field strength at that point
B the magnitude of the gravitational constant
C the mass of the Earth
D the potential energy at the point where the gradient is measured

Q12. The following data refer to two planets.

|  | radius/km | density/kg m-3 |
| :---: | :---: | :---: |
| planet P | 8000 | 6000 |
| planet Q | 16000 | 3000 |

The gravitational field strength at the surface of $P$ is $13.4 \mathrm{~N} \mathrm{~kg}^{-1}$. What is the gravitational field strength at the surface of $Q$ ?

A $\quad 3.4 \mathrm{~N} \mathrm{~kg}^{-1}$
B $\quad 13.4 \mathrm{~N} \mathrm{~kg}^{-1}$
C $\quad 53.6 \mathrm{~N} \mathrm{~kg}^{-1}$
D $\quad 80.4 \mathrm{~N} \mathrm{~kg}^{-1}$
(Total 1 mark)

Q13. Near the surface of a planet the gravitational field is uniform and for two points, 10 m apart vertically, the gravitational potential difference is $3 \mathrm{~J} \mathrm{~kg}^{-1}$. How much work must be done in raising a mass of 4 kg vertically through 5 m ?

A 3 J
B 6 J
C $\quad 12 \mathrm{~J}$
D $\quad 15 \mathrm{~J}$
(Total 1 mark)

Q14. What is the angular speed of a satellite in a geo-synchronous orbit around the Earth?

A $\quad 7.3 \times 10^{-5} \mathrm{rad} \mathrm{s}^{-1}$

B $\quad 2.6 \times 10^{-1} \mathrm{rad} \mathrm{s}^{-1}$

C $\quad 24 \mathrm{rad} \mathrm{s}^{-1}$

D $\quad 5.0 \times 10^{6} \mathrm{rad} \mathrm{s}^{-1}$
(Total 1 mark)

Q15. A planet has a radius half of the Earth's radius and a mass a quarter of the Earth's mass. What is the approximate gravitational field strength on the surface of the planet?

A $\quad 1.6 \mathrm{~N} \mathrm{~kg}^{-1}$

B $\quad 5.0 \mathrm{~N} \mathrm{~kg}^{-1}$

C $\quad 10 \mathrm{~N} \mathrm{~kg}^{-1}$

D $\quad 20 \mathrm{~N} \mathrm{~kg}^{-1}$
(Total 1 mark)

Q16. At a distance $R$ from a fixed charge, the electric field strength is $E$ and the electric potential is $V$. Which line, $\mathbf{A}$ to $\mathbf{D}$, gives the electric field strength and electric potential at a distance $2 R$ from the charge?

|  | electric field strength | electric potential |
| :---: | :---: | :---: |
| A | $\frac{E}{2}$ | $\frac{V}{4}$ |
| B | $\frac{E}{2}$ | $\frac{V}{2}$ |
| C | $\frac{E}{4}$ | $\frac{V}{2}$ |
| D | $\frac{E}{4}$ | $\frac{V}{4}$ |

(Total 1 mark)

Q17. A small mass is situated at a point on a line joining two large masses $m_{1}$ and $m_{2}$ such that it experiences no resultant gravitational force. If its distance from the mass $m_{1}$ is $r_{1}$ and its distance from the mass $m_{2}$ is $r_{2}$, what is the value of the ratio $\frac{r_{1}}{r_{2}}$ ?

A $\frac{m_{1}^{2}}{m_{2}^{2}}$
B $\frac{m_{2}^{2}}{m_{1}^{2}}$

C $\sqrt{\frac{m_{1}}{m_{2}}}$

D $\sqrt{\frac{m_{2}}{m_{1}}}$
(Total 1 mark)

Q18.A planet of mass $M$ and radius $R$ rotates so rapidly that loose material at the equator just remains on the surface. What is the period of rotation of the planet?
$G$ is the universal gravitational constant.
A $2 \pi \sqrt{\frac{R}{G M}}$
B $2 \pi \sqrt{\frac{R^{2}}{G M}}$
C $2 \pi \sqrt{\frac{G M}{R^{3}}}$
D $2 \pi^{\sqrt{\frac{R^{3}}{G M}}}$
(Total 1 mark)

Q19. Which one of the following has different units to the other three?
A gravitational potential
B gravitational field strength
C force per unit mass
D gravitational potential gradient

Q20. Which one of the following graphs correctly shows the relationship between the gravitational force, $F$, between two masses and the distance, $r$, between them?

A
B

C
D
(Total 1 mark)

Q21.A satellite is in orbit at a height $h$ above the surface of a planet of mass $M$ and radius $R$. What is the velocity of the satellite?
A $\sqrt{\frac{G M(R+h)}{R}}$
B $\frac{\sqrt{G M(R+h)}}{R}$
c $\sqrt{\frac{G M}{(R+h)}}$
D $\frac{\sqrt{G M}}{(R+h)}$
(Total 1 mark)

Q22.The gravitational potential difference between the surface of a planet and a point $\mathrm{P}, 10 \mathrm{~m}$ above the surface, is $8.0 \mathrm{~J} \mathrm{~kg}^{811}$. Assuming a uniform field, what is the value of the gravitational field strength in the region between the planet's surface and P?

A $\quad 0.80 \mathrm{Nkg}^{\mathrm{ma}_{1}}$
B $\quad 1.25 \mathrm{Nkg}^{\pi 1}$
C $\quad 8.0 \mathrm{Nkg}^{\mathrm{g}_{1}}$
D $80 \mathrm{Nkg}^{91}$
(Total 1 mark)

Q23. The following data refer to two planets.

|  | radius $/ \mathrm{km}$ | density $/ \mathrm{kg} \mathrm{m}^{-3}$ |
| :---: | :---: | :---: |
| planet P | 8000 | 6000 |
| planet Q | 16000 | 3000 |

The gravitational field strength at the surface of $P$ is $13.4 \mathrm{~N} \mathrm{~kg}^{-1}$. What is the gravitational field strength at the surface of $Q$ ?

A $\quad 3.4 \mathrm{~N} \mathrm{~kg}^{-1}$

B $\quad 13.4 \mathrm{~N} \mathrm{~kg}^{-1}$
C $\quad 53.6 \mathrm{~N} \mathrm{~kg}^{-1}$

D $\quad 80.4 \mathrm{~N} \mathrm{~kg}^{-1}$
(Total 1 mark)

Q24.Satellites $N$ and $F$ have the same mass and move in circular orbits about the same planet. $N$ is the nearer satellite and $F$ is the more distant. Which one of the following is smaller for $N$ than for $F$ ?

A gravitational force on the satellite

B speed

C kinetic energy

D time for one orbit

Q25.Two identical conducting spheres on insulating supports carry charges of magnitude $Q$ and 2Q respectively. When separated by distance $d$, the electrostatic repulsive force is $F$. The spheres are made to touch and then restored to their original separation $d$. If there is no loss of charge what is the new force of repulsion?

A $\frac{F}{2}$
B $\frac{3 F}{4}$
C $\frac{9 F}{8}$
D $\frac{4 F}{3}$
(Total 1 mark)

Q26.A mass of 5 kg is moved in a gravitational field from a point $\mathbf{X}$ at which the gravitational potential is $-20 \mathrm{~J} \mathrm{~kg}^{-1}$ to a point $\mathbf{Y}$ where it is $-10 \mathrm{~J} \mathrm{~kg}^{-1}$. The change in potential energy of the mass, in J , between $\mathbf{X}$ and $\mathbf{Y}$ is

A $\quad-50$
B $\quad-10$
C +10
D +50
(Total 1 mark)

Q27.For which of the following relationships is the quantity $y$ related to the quantity $x$ by the

$$
x \propto \frac{1}{y} ?
$$

|  | $x$ | $y$ |
| :---: | :---: | :---: |
| A | energy stored in a spring | extension of the spring |
| B | gravitational field strength | distance from a point mass |
| C | de Broglie wavelength of an electron | momentum of the electron |
| D | period of a mass-spring system | spring constant (stiffness) of the spring |

(Total 1 mark)

Q28.Graph 1 shows the variation of electric field strength $E$ with separation $r$ for two point charges. Graph 2 shows the corresponding variation of electric potential $V$ with separation.

Which line in the table correctly relates data for the two graphs?

|  | Magnitude of electric field strength at <br> separation $\boldsymbol{d}$ | Magnitude of electric potential at separation <br> $\boldsymbol{d}$ |
| :--- | :--- | :--- |
| A | Gradient of graph 2 at separation $d$ | Area under graph $\mathbf{1}$ from separation $d$ to $\infty$ |
| B | Area under graph $\mathbf{2}$ from separation $d$ to $\infty$ | Area under graph $\mathbf{1}$ from separation $d$ to $\infty$ |
| C | Gradient of graph $\mathbf{2}$ at separation $d$ | Gradient of graph $\mathbf{1}$ at separation $d$ |
| D | Area under graph $\mathbf{2}$ from separation $d$ to $\infty$ | Gradient of graph $\mathbf{1}$ at separation $d$ |

(Total 1 mark)

Q29. When two similar spherical objects of radius $R$ are touching, the gravitational force of attraction between them is $F$. When the gravitational force between them is $F / 4$, the distance between the surfaces of the spheres is

A $R$

B $2 R$

C $4 R$

D $6 R$

Q30.g is the strength of the gravitational field at the surface of the Earth; $R$ is the radius of the Earth. The potential energy lost by a satellite of mass $m$ falling to the Earth's surface from a height $R$ above the surface is

A $4 m g R$
B $2 m g R$
C $\frac{m g R}{2}$
D $\frac{m g R}{4}$
(Total 1 mark)
