

## Impulse and Momentum 2 - Mark Scheme

Q1.

Question Number	Answer	Mark
	C	1

Q2.

Question Number	Answer	Mark
(a)(i)	<p>Use of <math>p = mv</math> (1)</p> <p>(mass may be left as <math>m</math> or justify ignoring mass, e.g. by cancelling)</p> <p>See either <math>\times \cos 29^\circ</math> or <math>\times \cos 61^\circ</math> (1)</p> <p>A correct value of momentum for at least one ball, or total, after collision (see 0.036 N s Or 0.55 (m) Or 0.011 (N s) Or 0.17 (m) Or 0.048 (N s) Or 0.72(m)) (1)</p> <p>Calculated momentum before = calculated momentum after <b>and</b> states that momentum is conserved</p> <p><b>Or</b></p> <p>Calculated momentum before = calculated momentum after <b>and</b> states that momentum before = momentum after (1)</p> <p><u>Example of calculation</u></p> <p><math>p_1 = 0.066 \text{ kg} \times 0.72 \text{ m s}^{-1} = 0.0475 \text{ N s} = 0.048 \text{ N s}</math> (2 sf)</p> <p>Components in direction of <math>u_1 = (0.066 \text{ kg} \times 0.63 \text{ m s}^{-1} \times \cos 29^\circ) + (0.066 \text{ kg} \times 0.35 \text{ m s}^{-1} \times \cos 61^\circ)</math></p> <p><math>= 0.0364 \text{ N s} + 0.0112 \text{ N s} = 0.0476 \text{ N s} = 0.048 \text{ N s}</math> (2 sf)</p> <p>Momentum before = momentum after, so satisfies principle of conservation of momentum</p>	4

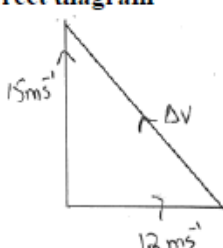

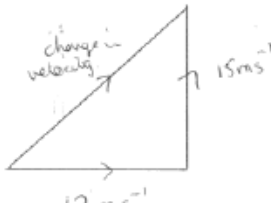

(a)(ii)	<p>Use of <math>E_k = \frac{1}{2} mv^2</math> Or <math>E_k \propto v^2</math> (1)</p> <p>Initial <math>E_k = 0.017 \text{ (J)}</math> (<math>v^2 = 0.52 \text{ (m}^2 \text{ s}^{-2}\text{)}</math>) (1)</p> <p>Calculation of final <math>E_k = 0.017 \text{ (J)}</math> and statement that <math>E_k</math> conserved (final <math>v^2 = 0.52 \text{ (m}^2 \text{ s}^{-2}\text{)}</math>) (1)</p> <p><u>Example of calculation</u></p> <p><math>E_k = \frac{1}{2} mv^2</math></p> <p>Before:</p> <p>Ball 1, <math>E_k = \frac{1}{2} \times 0.066 \text{ kg} \times (0.72 \text{ m s}^{-1})^2 = 0.0171 \text{ J}</math></p> <p>After:</p> <p>Ball 1, <math>E_k = \frac{1}{2} \times 0.066 \text{ kg} \times (0.63 \text{ m s}^{-1})^2 = 0.0131 \text{ J}</math></p> <p>Ball 2, <math>E_k = \frac{1}{2} \times 0.066 \text{ kg} \times (0.35 \text{ m s}^{-1})^2 = 0.0040 \text{ J}</math></p> <p>Total = 0.0171 J, so kinetic energy conserved</p>	3
---------	--	---

(b)(i)	The time intervals between images	(1)	2
	The scale of the photograph (accept the diameter of the balls)	(1)	
(b)(ii)	$\phi = 45^\circ$ to $52^\circ$	(1)	3
	Use of graph with their angle to determine total kinetic energy after the collision	(1)	
	Statement that it is an inelastic collision Or Statement that kinetic energy is not conserved (dependent on candidate attempting MP1 and MP2)	(1)	
<b>Total for question</b>			<b>14</b>

Q3.

Answer	Mark
B	1

Q4.

Question Number	Answer	Mark
(a)	Sum of momenta before (collision) = sum of momenta after (collision) Or the total momentum before (a collision) = the total momentum after (a collision) Or total momentum remains constant Or the momentum of a system remains constant	(1)
	Provided no external/unbalanced/resultant force acts Or in a closed/isolated system	(1)
(b)	Force equals rate of change of momentum Or force is proportional to rate of change of momentum Or $F = \Delta(mv) / \Delta t$ with terms defined Or $F = \Delta p / \Delta t$ with terms defined	(1)
(c)(i)	Line at right angles to drawn vector, arrow upwards and labelled. Resultant vector joined and arrow in correct direction. <b>Correct diagram</b>  <b>Wrong direction</b> (vector addition rather than subtraction: can score 1 mark here but allow full ecf in (c)(ii)) 	(1) (1)

(c)(ii)	Use of Pythagoras Or trig. Change in velocity = $19 \text{ m s}^{-1}$ Direction $51^\circ$ from horizontal. (accept $\theta = 51^\circ$ if $\theta$ correctly added to diagram)  <u>Example of calculation</u> $\Delta v = \sqrt{15^2 + 12^2}$ $\Delta v = 19.2 \text{ m s}^{-1}$ Tan $\theta = 15/12$ $\theta = 51^\circ$	(1) (1) (1)	3
(c)(iii)	Use of $p=mv$ and $F = \Delta p/t$ $F = 7100 \text{ N}$ or $7200 \text{ N}$ ecf their value from (c)(ii)  <u>Example of calculation</u> $F = \Delta p/t$ $F = 1500 \text{ kg} \times 19.2 \text{ m s}^{-1} / 4.0 \text{ s}$ $7200 \text{ N}$	(1) (1)	2
<b>Total for Question</b>			<b>10</b>

Q5.

Question Number	Answer	Mark
	<b>C – resultant force</b>	<b>1</b>
	Incorrect Answers:  A – acceleration is the gradient of a velocity-time graph B – kinetic energy could be determined from the area under a force-displacement graph D – speed is the gradient of a distance-time graph	

Q6.

Question Number	Answer	Mark
(a)	Evidence of $E_k = \frac{1}{2} mv^2$ and $p = mv$	(1)
	Correct algebraic link to $E_k = p^2/2m$	(1)
(b)	Use of eV conversion Use of $E_k = p^2/2m$ Use of $\lambda = h/p$ $\lambda = 2.09 \times 10^{-13} \text{ m}$	(1) (1) (1) (1)
	<u>Example of calculation</u> $E_k = 18\,800 \text{ eV} \times 1.6 \times 10^{-19} \text{ C} = 3.01 \times 10^{-15} \text{ J}$ $3.01 \times 10^{-15} \text{ J} = p^2/2 \times 1.67 \times 10^{-27} \text{ kg}$ $p = 3.17 \times 10^{-21} \text{ N s}$ $\lambda = 6.63 \times 10^{-34} \text{ J s} \div 3.17 \times 10^{-21} \text{ N s}$ $\lambda = 2.09 \times 10^{-13} \text{ m}$
