| 3(a) | To curve the tracks/paths Or to produce a centripetal force/acceleration <br> Or to allow particles to spiral Or to produce an arc Or to produce circular <br> motion <br> So that momentum/energy/charge/ velocity/mass can be investigated | (1) |
| 3(b) | The radius of curve gets less Or curvature increases <br> (Because) particle slows down Or loses energy Or loses momentum | (1) |
| 3(c) | (Magnetic field) out of page | $\mathbf{2}$ |
| 3(d)(i) | Does not leave a track Or there is only one visible track for $\mu^{+}$ <br> Clear demonstration of charge conservation in this situation | $\mathbf{2}$ |
| 3(d)(ii) | Reference to momentum <br> Reference to change of direction of the visible path <br> (Hence) another particle must have an equal but opposite change of <br> momentum Or another particle produced to conserve momentum | $\mathbf{( 1 )}$ |
