Paper 3 Core Theory

May/June 2021

MARK SCHEME

Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **10** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.

2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.

3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).

4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

5 'List rule' guidance

For questions that require *n* responses (e.g. State **two** reasons ...):

- The response should be read as continuous prose, even when numbered answer spaces are provided.
- Any response marked *ignore* in the mark scheme should not count towards *n*.
- Incorrect responses should not be awarded credit but will still count towards *n*.
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
- Non-contradictory responses after the first *n* responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks
1(a)	(distance =) area under graph	C1
	16×30	C1
	480 (m)	A1
1(b)	$(110 - 60 =) 50$	B1
	(speed =) distance \div time in any form	C1
	$460 / 50$	C1
	9.2 (m / s)	A1
1(c)	constant speed OR <u>16 m/s</u>	B1
1(d)	decelerating OR negative acceleration OR slowing down / owtte	B1

Question	Answer	Marks
2(a)	find mass of measuring cylinder / beaker / container empty	B1
	add sea water AND read volume	B1
	find mass of measuring cylinder / beaker / container with seawater	B1
	subtract the 2 mass readings (to give mass of seawater)	B1
	$(D) = M \div V$ in any form	B1
2(b)	wood less dense (than seawater) / ora	B1

Question	Answer	Marks
3(a)(i)	force \times (perp) distance	C1
	240×1.9	C1
	456 (Nm) (which is close to 460 Nm)	A1
3(a)(ii)	c.w. moment = a.c.w moment OR girl's moment = brother's moment	C1
	$240 \times 1.9 = W \times 1.2$ OR $456 \div 1.2$ OR $460 \div 1.2$	C1
	380 (N)	A1
3(b)	$W = mg$ in any form OR ($m =$) $W \div g$	C1
	$240 \div 10$	C1
	24	A1
	kg	B1

Question	Answer	Marks
4(a)(i)	chemical (energy)	B1
4(a)(ii)	any two from: friction thermal / heat vibrations / sound resistance in wires	B2

Question	Answer	Marks
4(b)	any two advantages: free fuel renewable no air pollution / no SO ₂ / no acid rain no greenhouse gases / CO ₂ emissions little / no maintenance quiet	B2
	any two disadvantages: needs a lot of space no energy at night less energy when cloudy / winter D.C.	B2

Question	Answer	Marks
5(a)	$P = F \div A$ in any form	B1
	tractor has larger area (of tyre(s) in contact with ground) / ora	B1
	so (tractor) pressure is less (on the ground) / ora	B1
5(b)	kinetic energy of molecules increases / speed of molecules increases	B1
	hit (tyre walls) more often / greater rate	B1
	hit (tyre walls) with greater force / harder	B1

Question	Answer	Marks
6(a)(i)	conduction	B1
6(a)(ii)	melts wax OR pin falls off	C1
	first pin to fall (is best conductor)	A1

Question	Answer	Marks
6(b)(i)	radiation	B1
6(b)(ii)	radiation	B1
6(c)	foil reflects (radiation / infrared / radiant heat)	B1
	more energy into room (from heater)	B1

Question	Answer	Marks
7(a)(i)	infrared / microwaves / radio waves	B1
7(a)(ii)	ultraviolet / X-rays / gamma rays	B1
7(a)(iii)	middle box ticked (speed)	B1
7(a)(iv)	top box ticked (All electromagnetic waves are transverse.)	B1
7(a)(v)	top box ticked (They transfer energy from one place to another.)	B1
7(b)(i)	infrared	B1
7(b)(ii)	X-rays	B1

Question	Answer	Marks
8(a)(i)	c	B1
8(a)(ii)	normal	B1
8(a)(iii)	reflected ray a continuation of incident ray AND in correct quadrant	M1
	angle of reflection equals angle of incidence	A1

Question	Answer	Marks
8(b)(i)	continuation of incident ray AND reflected internally in correct quadrant	M1
	angle of reflection equals angle of incidence	A1
8(b)(ii)	continuation of incident ray AND emerging from block in correct quadrant	M1
	angle of refraction larger than angle of incidence	A1

Question	Answer	Marks
9(a)	showing repulsion	B1
9(b)	insulators: rubber AND wood	B1
	conductors: iron AND gold	B1
9(c)	electrons / negative charges	B1
	move / transfer	B1
	from cloth to rod	B1

Question	Answer	Marks
10(a)	top to heater	B1
	middle to thermistor	B1
	bottom to galvanometer	B1
10(b)(i)	voltmeter symbol	B1
	in parallel with resistor / supply	B1

Question	Answer	Marks
10(b)(ii)	$V = I \times R$ in any form	C1
	$11.5 \div 0.25$	C1
	46	A1
	ohms / Ω	B1

Question	Answer	Marks
11(a)(i)	7	B1
11(a)(ii)	6	B1
11(a)(iii)	7	B1
11(b)	using a pair of values e.g. 300 and 150 OR 212 and 106 etc.	C1
	(difference in time is) 10 (min)	A1
