Candidate surname					Other names				
Centre Number					Candidate Number				
<b>Pearson Edexcel</b> <b>Level 1/Level 2 GCSE (9–1)</b>					<input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>				
Time 1 hour 45 minutes					<b>Paper reference</b> <b>1PH0/2H</b>				
<b>Physics</b> <b>PAPER 2</b> <b>Higher Tier</b>									
<b>You must have:</b> Calculator, ruler, protractor								Total Marks	

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with **your answer clearly identified** at the **end of your solution**.

### Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk (\*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- A list of equations is included at the end of this exam paper.

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- Good luck with your examination.

Pearson

Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒.  
 If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

- 1 (a) A student gives a plastic strip an overall electric charge.
- (i) Describe **one** way that the student can give the plastic strip an overall electric charge.

(1)

- (ii) Figure 1 shows a gold leaf electroscope that can be used to investigate static electricity.

Figure 1

The electroscope has no overall charge.

The gold leaf has a very small mass and can bend very easily.

The student brings a negatively charged plastic strip near to the cap of the electroscope.

The gold leaf bends away from the metal rod.

Which diagram shows the way that electric charge is now distributed?

(1)

A

B

C

D

(b) Figure 2a shows another gold leaf electroscope that has been given an overall negative charge.

A student connects the metal cap of the charged electroscope to earth with a piece of wire as shown in Figure 2b.

**Figure 2a**

**Figure 2b**

Explain why the gold leaf has moved.

(2)

.....

.....

.....

.....

(c) Two small objects, P and Q, are each given an electric charge.

Figure 3 represents the electric fields around the objects, P and Q.

object P

object Q

**Figure 3**

(i) Use information from Figure 3 to give **two** differences between the charge on P and the charge on Q.

(2)

1 .....

2 .....

(ii) Object P and object Q are held near to each other so that their electric fields interact with each other.

State the effect that the electric field of object Q has on object P.

(1)

.....

.....

**BLANK PAGE**

- 2 (a) Figure 4 shows the results from an experiment where the potential difference (voltage) across a filament lamp was varied.

The current and voltage were measured.

**Figure 4**

- (i) Describe the relationship between the current and the voltage as shown in the graph in Figure 4.

(2)

.....

.....

.....

.....

- (ii) Use the values of the voltage and current at point P and at point Q on the graph in Figure 4 to complete the table in Figure 5. (2)

	voltage in V	current in mA
point P		
point Q		

**Figure 5**

- (iii) Calculate the resistance of the filament lamp when the voltage is 4.5V and the current is 51 mA.

Use the equation

$$R = \frac{V}{I} \quad (2)$$

resistance = .....  $\Omega$

- (iv) Explain why the resistance of the filament lamp changes as the voltage across it increases. (3)

.....

.....

.....

.....

.....

.....

.....

**(Total for Question 2 = 9 marks)**

- 3 (a) Describe, in terms of particles, **two** differences between a solid and a liquid of the same substance.

(2)

1 .....

.....

2 .....

.....

- (b) Figure 6 shows the dimensions of a solid block of concrete.

**Figure 6**

Density of concrete,  $\rho$ , = 2100 kg / m<sup>3</sup>.

Calculate the mass of the concrete block.

Use the equation

$$m = \rho \times V$$

(3)

mass of concrete block = ..... kg

(c) Figure 7 shows a shed made mostly of concrete blocks.

**Figure 7**

State **two** practical ways to reduce heat loss from this shed.

(2)

1 .....

.....

2 .....

.....

(d) On a very cold day, the temperature of the air is  $-4^{\circ}\text{C}$ .

Calculate the value of this temperature on the kelvin scale.

(1)

temperature = ..... K

**(Total for Question 3 = 8 marks)**

- 4 (a) Figure 8 shows some water in a tank.

**Figure 8**

- (i) The bottom of the tank has an area of  $0.80 \text{ m}^2$ .

The force on the bottom of the tank, due to the water, is  $2400 \text{ N}$ .

Calculate the pressure, due to the water, on the bottom of the tank.

(3)

pressure = ..... Pa

- (ii) More water is added to the tank.

Explain how the pressure on the bottom of the tank changes when more water is added to the tank.

(2)

.....

.....

.....

.....

(iii) Figure 9 shows an object on the bottom of the tank of water.

**Figure 9**

Draw an arrow on Figure 9 to show the direction of the force exerted by the water on the surface of the object at point X.

(b) Figure 10 is a graph showing how the atmospheric pressure changes with the height above sea level on the Earth's surface.

**Figure 10**

(i) An aeroplane descends from 6000 m to 2000 m.

Use the graph to find the change in atmospheric pressure as the aeroplane descends.

(2)

change in pressure = ..... kPa

(ii) Suggest **one** reason why the atmospheric pressure is greater at 2000 m than at 6000 m.

(1)

.....

.....

(c) Figure 11 shows two drawings of the same person on a bed.

**Figure 11**

Explain why the person exerts a different pressure on the bed when standing up than when lying down.

- (b) Two long, thin magnets are held with their N-poles facing each other.  
The force,  $F$ , between the magnets can be calculated using the equation

$$F = \frac{K}{d^2}$$

where

$K$  is a constant value

$d$  is the distance between the magnets.

- (i) The magnets are 4.0 cm apart.

The force between the magnets is 1.2 N.

Calculate the value of  $K$ .

State the unit.

(3)

$K = \dots\dots\dots$  unit  $\dots\dots\dots$

- (ii) The magnets are held the same distance apart but with the N-pole of one magnet now facing the S-pole of the other magnet.

The value of  $K$  does not change.

State how the force would compare with the force in part (i).

(1)

**(Total for Question 5 = 9 marks)**

6 A student investigates moments of forces.

Figure 14 shows the apparatus used.

**Figure 14**

The pivot is under the centre of the rod.

A magnet is fixed to one end of the rod.

A piece of modelling clay is fixed to the other end of the rod.

The system is in equilibrium.

- (a) State the relationship between the moment of the weight of the magnet and the moment of the weight of the piece of modelling clay about the pivot.

(1)

.....

.....

(b) The student fixes a coil to the bench under the magnet as shown in Figure 15.

**Figure 15**

The coil of wire is connected to a d.c. power supply so that there is a current in the coil.

To bring the system back into equilibrium, the student hangs a 0.050 N weight on the rod, 8.4 cm away from the pivot, as shown in Figure 15.

Calculate the size of the force between the magnet and the coil.

(3)

force = ..... N

(c) Describe how the student could develop the investigation to determine if the size of the force between the magnet and the coil is directly proportional to the size of the current in the coil.

(4)

.....

.....

.....

**(Total for Question 6 = 10 marks)**

- 7 (a) Two cyclists ride on a hilly road and go through points P, Q, R and S.

The diagram in Figure 16 shows how the vertical height of the road changes during the journey from P to S.

**Figure 16**

- (i) The greatest overall change in gravitational potential energy for each cyclist is between which two points on the journey?

(1)

- A** P and Q
- B** Q and R
- C** P and S
- D** R and S

- (ii) The total weight of one cyclist and bicycle is 700 N.

Calculate the total amount of work done against gravity when the cyclist travels from point P to point Q in the journey.

(2)

work done = ..... J

- (iii) The gravitational potential energy of the other cyclist changes by 11 250 J when travelling from point Q to point R.

Calculate the mass of this cyclist.

Gravitational field strength = 10 N/kg

Use the equation

$$\Delta GPE = m \times g \times \Delta h \quad (2)$$

mass = ..... kg

- (iv) Explain why the total amount of work done by a cyclist between points Q and R is different from the change in gravitational potential energy of the cyclist between points Q and R.

(2)

.....

.....

.....

.....

- (v) The cyclists lubricated the chains and the wheel bearings of their bicycles before setting off.

Lubricating the chains and wheel bearings helps to

(1)

- A** decrease the amount of work done against gravity
- B** decrease the efficiency of the cyclist and bicycle
- C** increase the efficiency of the cyclist and bicycle
- D** increase the overall amount of energy transferred by the cyclist

DO NOT WRITE IN THIS AREA

- 8 A technician investigates different electrical devices that are used in a car.

The technician connects a device to the 12V car battery.

The technician measures the current in the circuit and the potential difference (voltage) across the device.

Figure 17 shows the car battery and the device that is being tested.

**Figure 17**

- (a) (i) Draw on Figure 17 to show how the circuit should be completed so that the current in the circuit and voltage across the device can be measured.

(2)

- (ii) The technician tests a headlamp.

The current in the headlamp is 4.8 A when connected to the 12V battery.

Calculate the power supplied to the headlamp.

(2)

power = ..... W

(iii) The technician tests an interior light.

The current in the interior light is 600 mA when connected to the 12 V battery.

Calculate the energy transferred to the interior light in 7 minutes.

Use an equation selected from the list of equations at the end of the paper.

(2)

energy transferred = ..... J

(b) The technician connects four devices to the car battery.

Each device is connected to its own switch and its own fuse.

Figure 18 shows how the four devices, fuses and switches are connected.

The current in each device is shown next to the device.

Figure 18

- (i) Calculate the current in the wires to the battery when all the devices are switched on.

(1)

current = ..... A

- (ii) State how the overall resistance of the circuit changes when any one of the devices is switched off.

(1)

- (iii) There is a current of 2.3 A in the radio when the radio is working correctly.

Which of these should the technician choose to protect the radio circuit?

(1)

- A** 2 A fuse
- B** 5 A fuse
- C** 10 A fuse
- D** 13 A fuse

- (iv) Explain why the wires to the battery in a car are thicker than the wires that connect each device to its switch and its fuse.

(2)

**(Total for Question 8 = 11 marks)**

9 (a) There is an alternating current of 3 A in the primary coil of a transformer.

There is an alternating current of 6 A in the secondary coil of the transformer.

The transformer is 100% efficient.

(i) The size of the potential difference (voltage) across the secondary coil is

(1)

- A** twice the size of the current in the primary coil
- B** half the size of the current in the primary coil
- C** twice the size of the voltage across the primary coil
- D** half the size of the voltage across the primary coil

(ii) Explain how an alternating current in the primary coil causes an alternating current in the secondary coil of the transformer.

10 (a) An electric kettle contains 1.41 kg of water at 25 °C.

The kettle is switched on.

After a while, the water reaches boiling point at 100 °C.

The specific heat capacity of water is 4200 J/kg °C.

- (i) Calculate the amount of thermal energy supplied to the water by the kettle.  
Give your answer to the appropriate number of significant figures.

Use an equation selected from the list of equations at the end of the paper.

(3)

energy supplied = ..... J

- (ii) The kettle is kept switched on and the water continues to boil.

After a while, the mass of the water in the kettle has decreased to 1.21 kg.

The thermal energy supplied to the water during this time was 450 000 J.

Calculate the specific latent heat of vaporisation of water.

Use an equation selected from the list of equations at the end of the paper.

(3)

specific latent heat of vaporisation = ..... J/kg
