General Certificate of Secondary Education

## Mark Scheme for June 2016

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

1. Annotations

Used in the detailed Mark Scheme:

| Annotation | Meaning |
| :--- | :--- |
| $/$ | alternative and acceptable answers for the same marking point |
| $(1)$ | separates marking points |
| not/reject | answers which are not worthy of credit |
| ignore | statements which are irrelevant - applies to neutral answers |
| allow/accept | answers that can be accepted |
| (words) | words which are not essential to gain credit |
| words | underlined words must be present in answer to score a mark |
| ecf | error carried forward |
| AW/owtte | alternative wording |
| ORA | or reverse argument |

| 5 | indicate uncertainty or ambiguity |
| :---: | :---: |
| BOD | benefit of doubt |
| CON | contradiction |
| $\stackrel{3}{ }$ | incorrect response |
| ECF | error carried forward |
| ( | draw attention to particular part of candidate's response |
| $\square$ | draw attention to particular part of candidate's response |
| $\cdots$ | draw attention to particular part of candidate's response |
| NBOD | no benefit of doubt |
| R | reject |

|  |  |  | correct response |
| :--- | :--- | :---: | :---: |
| $\vdots$ | draw attention to particular part of candidate's response |  |  |
| $\boldsymbol{n}$ | information omitted |  |  |

## 2. Subject-specific Marking Instructions

a. If a candidate alters his/her response, examiners should accept the alteration.
b. Crossed out answers should be considered only if no other response has been made. When marking crossed out responses, accept correct answers which are clear and unambiguous.
E.g.

For a one mark question, where ticks in boxes 3 and 4 are required for the mark:

c. The list principle:

If a list of responses greater than the number requested is given, work through the list from the beginning. Award one mark for each correct response, ignore any neutral response, and deduct one mark for any incorrect response, e.g. one which has an error of science. If the number of incorrect responses is equal to or greater than the number of correct responses, no marks are awarded. A neutral response is correct but irrelevant to the question.
d. Marking method for tick boxes:

Always check the additional guidance.
If there is a set of boxes, some of which should be ticked and others left empty, then judge the entire set of boxes.
If there is at least one tick, ignore crosses. If there are no ticks, accept clear, unambiguous indications, e.g. shading or crosses.
Credit should be given for each box correctly ticked. If more boxes are ticked than there are correct answers, then deduct one mark for each additional tick. Candidates cannot score less than zero marks.
E.g. If a question requires candidates to identify a city in England, then in the boxes

| Edinburgh |  |
| :--- | :--- |
| Manchester |  |
| Paris |  |
| Southampton |  |

the second and fourth boxes should have ticks (or other clear indication of choice) and the first and third should be blank (or have indication of choice crossed out).

| Edinburgh |  |  | $\checkmark$ |  |  | $\checkmark$ | $\checkmark$ | $\checkmark$ | $\checkmark$ |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Manchester | $\checkmark$ | $\times$ | $\checkmark$ | $\checkmark$ | $\checkmark$ |  |  |  | $\checkmark$ |  |
| Paris |  |  |  | $\checkmark$ | $\checkmark$ |  | $\checkmark$ | $\checkmark$ | $\checkmark$ |  |
| Southampton | $\checkmark$ | $\times$ |  | $\checkmark$ |  | $\checkmark$ | $\checkmark$ |  | $\checkmark$ |  |
| Score: | $\mathbf{2}$ | $\mathbf{2}$ | $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | NR |

| Question |  | Answer | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 2 |  | [Level 3] <br> Detailed explanation of eclipse and a detailed explanation of the importance of apparent size <br> Quality of written communication does not impede communication of the science at this level. $\text { (5 - } 6 \text { marks) }$ <br> [Level 2] <br> Detailed explanation of eclipse <br> OR detailed explanation of the importance of apparent size <br> OR Limited explanation of eclipse and limited explanation of the importance of apparent size <br> Quality of written communication partly impedes communication of the science at this level. (3-4 marks) <br> [Level 1] <br> Limited explanation of eclipse. <br> Quality of written communication impedes communication of the science at this level. (1-2 marks) <br> [Level 0] Insufficient or irrelevant science. Answer not worthy of credit. <br> (0 marks) | 6 | This question is targeted at grades up to $E$. Indicative scientific points may include: <br> Detailed explanation of eclipse <br> - Moon between Sun and the Earth casts shadow/causes darkness on Earth <br> - example of diagram: <br> Explanation of the importance of apparent size <br> Detailed <br> - diagram showing Moon near enough to Earth to produce umbra <br> - Moon is smaller but much closer / enough to block out all the light from the Sun <br> - Sun is wider and much further away so Moon can block all light from the Sun <br> Limited <br> - Moon is smaller / Sun is bigger <br> Limited explanations of eclipse <br> - Moon orbits the Earth <br> - Moon moves between Earth and Sun <br> - Moon blocks Sun <br> - Moon cast shadow on Earth <br> - Total/full eclipse seen within umbra of shadow/ when all light blocked <br> - Partial eclipse seen in penumbra of shadow <br> Ignore diagrams that do not produce an eclipse. Use the L1, L2, L3 annotations in RM Assessor; do not use ticks. |
|  |  | Total | 6 |  |

| Question |  | Answer | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 3 | a | 14,000 million years | 1 |  |
|  | b | $\begin{aligned} & 70 \times 300 \\ & 21000(\mathrm{~km} / \mathrm{s}) \end{aligned}$ | 2 | correct numerical answer gains 2 marks |
|  | C | $\text { uses } 273$ $-270$ | 2 | Allow -276 / 276 / 270 / 273-3 / 273x3 etc. Allow just 273 <br> correct numerical answer gains 2 marks |
|  |  | Total | 5 |  |

| Question |  |  | Answer | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | a |  | Any correct average using 4 or 5 stars to any s.f. [1] correct average distance 170 [1] <br> Star D is too far away/not in the group/an outlier OR distances A, B, C and E are similar | 3 | 5 stars gives 186 (Others mean values for 4 of the stars are 191.25, 187.5, 192.5 and 188.75) $170=2$ marks |
|  | b | i | Hydrogen <br> Helium | 2 | Any order <br> Accept symbols $\mathrm{H}_{2} / \mathrm{H} / \mathrm{He}$ |
|  |  | ii | any 3 <br> Gravity (pulls cloud inwards) <br> temperature increases <br> pressure (increases) <br> (At high enough temperature) fusion starts <br> Hydrogen fuses to helium | 3 | Accept compresses <br> Ignore fusion causing initial temperature and pressure increase / fusion causing further temperature increase <br> Ignore changes in volume <br> allow initial low temperature needed for atoms to be pulled in by gravity. |
|  |  |  | Total | 8 |  |

| Question |  | Answer | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 6 | a | $\begin{aligned} & 0.2 \\ & 1 \end{aligned}$ | 2 | If no response in table check the graph |
|  | b | (Yes) <br> it has the largest/biggest diameter [1] <br> it will collect the most light [1] | 2 | No mark for Yes/No. But, if 'No' 1 mark max. <br> Accept it is the biggest (lens) / has the largest aperture Accept correct comparative size e.g it is big compared to all the others / it is bigger <br> Accept it collects a lot of light Ignore more wavelengths/frequencies |
|  | c | speed <br> wavelength <br> not bent | 3 |  |
|  |  | Total | 7 |  |

| Question |  |  | Answer | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7* | a | i | background/fixed stars [1] <br> star (to be measured) [1] <br> Earth / planet / satellite / observer / eye [1] <br> Sun [1] | 4 | Accept distant stars <br> accept closer star Not Sun <br> Not Moon <br> Ignore star |
|  |  | ii | Clear indication of half the angle subtended by the Earth's orbit | 1 | accept equivalent angles e.g. the angle between a vertical line through the Earth and the adjacent light ray. |
|  | b |  | $\begin{aligned} & \hline 1 \div 0.71 \\ & 1.4 \\ & \text { Parsec / pc } \\ & \hline \end{aligned}$ | 3 | correct numerical answer gains 2 marks ignore megaparsec/Mpc |
|  |  |  | Total | 8 |  |

| Question |  | Answer | Mark | Guidance |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{8}^{*}$ | a |  | idea of spreading cost [1] <br> idea of sharing expertise / more scientists [1] | Accept more/sharing resources for 1 mark, if no other mark <br> scored |  |
|  | b | i | idea of non-scientists e.g. <br> politicians/bureaucrats/administrators/officials/Head of <br> (ESA)/Governments/EU. | 1 | Not just engineers/ESA in analysing results <br> Ignore NASA |

| Question |  | Answer | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 8* | ii | [Level 3] <br> States 3 advantages and 3 disadvantages. Quality of written communication does not impede communication of the science at this level. <br> (5 - 6 marks) <br> [Level 2] <br> States 2 advantages and 2 disadvantages. 3 and $0=3$ marks. Quality of written communication partly impedes communication of the science at this level. (3-4 marks) <br> [Level 1] <br> States an advantage and a disadvantage. Quality of written communication impedes communication of the science at this level. (1-2 marks) <br> [Level 0] Insufficient or irrelevant science. Answer not worthy of credit. | 6 | This question is targeted at grades up to $\mathbf{C}$ <br> Indicative scientific points may include: advantages <br> - no atmospheric pollution <br> - no light pollution <br> - avoids atmospheric refraction <br> - avoids atmospheric absorption <br> - all parts of em spectrum available <br> - new discoveries <br> - shows beauty of science <br> - collect more accurate/detailed data <br> - national prestige <br> - international cooperation <br> - encourage support for science <br> - clearer image <br> disadvantages <br> - cost of setting up <br> - cost of maintenance <br> - cost of repair <br> - money could be used for better purposes e.g. hospitals etc. <br> - pollution during take off <br> - risk of accident during take off <br> - very hazardous for astronauts <br> - difficult working conditions (to maintain/repair/upgrade) <br> Ignore incorrect statements <br> Do not accept space telescopes are closer to observed stars <br> Use the L1, L2, L3 annotations in RM Assessor; do not use ticks. |
