General Certificate of Secondary Education

# Mark Scheme for June 2015

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2015

## Annotations

Used in the detailed Mark Scheme:

Meaning	
alternative and acceptable answers for the same marking point	
separates marking points	
answers which are not worthy of credit	
statements which are irrelevant - applies to neutral answers	
answers that can be accepted	
words which are not essential to gain credit	
underlined words must be present in answer to score a mark	
error carried forward	
alternative wording	
or reverse argument	
	alternative and acceptable answers for the same marking point         separates marking points         answers which are not worthy of credit         statements which are irrelevant - applies to neutral answers         answers that can be accepted         words which are not essential to gain credit         underlined words must be present in answer to score a mark         error carried forward         alternative wording

## Available in scoris to annotate scripts

?	indicate uncertainty or ambiguity
BOD	benefit of doubt
CON	contradiction
×	incorrect response
ECF	error carried forward
0	draw attention to particular part of candidate's response
	draw attention to particular part of candidate's response
~~~	draw attention to particular part of candidate's response
NBOD	no benefit of doubt
R	reject
✓	correct response
ž	draw attention to particular part of candidate's response
<b>^</b>	information omitted

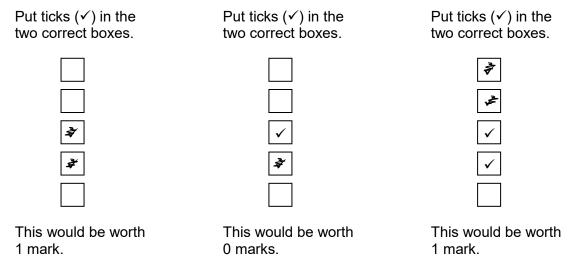

#### A183/02

### Subject-specific Marking Instructions

- a. If a candidate alters his/her response, examiners should accept the alteration.
- b. Crossed out answers should be considered only if no other response has been made. When marking crossed out responses, accept correct answers which are clear and unambiguous.

## E.g.

For a one mark question, where ticks in boxes 3 and 4 are required for the mark:

### c. The list principle:

If a list of responses greater than the number requested is given, work through the list from the beginning. Award one mark for each correct response, ignore any neutral response, and deduct one mark for any incorrect response, e.g. one which has an error of science. If the number of incorrect responses is equal to or greater than the number of correct responses, no marks are awarded. A neutral response is correct but irrelevant to the question.

#### A183/02

d. Marking method for tick boxes:

Always check the additional guidance.

If there is a set of boxes, some of which should be ticked and others left empty, then judge the entire set of boxes. If there is at least one tick, ignore crosses. If there are no ticks, accept clear, unambiguous indications, e.g. shading or crosses. Credit should be given for each box correctly ticked. If more boxes are ticked than there are correct answers, then deduct one mark for each additional tick. Candidates cannot score less than zero marks.

E.g. If a question requires candidates to identify a city in England, then in the boxes

Edinburgh	
Manchester	
Paris	
Southampton	

the second and fourth boxes should have ticks (or other clear indication of choice) and the first and third should be blank (or have indication of choice crossed out).

Edinburgh			✓			✓	✓	$\checkmark$	$\checkmark$	
Manchester	✓	×	✓	~	✓				✓	
Paris				✓	✓		✓	✓	✓	
Southampton	✓	×		✓		✓	✓		✓	
Score:	2	2	1	1	1	1	0	0	0	NR

A183/02

June 2015

### MARK SCHEME:

Q	uesti	on	Answer	Mar	Guidance
1*	а		to replicate/repeat results / gain confidence in results/ confirm the results / results are reliable/ more evidence / to see if they had made a mistake.	1	<b>ignore</b> to work out an average / to see if results were reproducible/ accuracy of results
	b		idea of using another telescope	1	not optical telescope
	С	i	an advantage [1] e.g. they may provide new knowledge /intrinsically interesting / we want to know / show we are not hostile / possibility of trade / communicate	3	<b>accept</b> provides evidence for/confirms/ proves extra-terrestrial life.
			<u>a disadvantage</u> [1] e.g. they may be hostile / want to use the Earth / want to visit / waste of money/resources / very long travel time for signal		<b>accept</b> specific cultural references – e.g. assimilation into a Borg collective
			An explicit conclusion consistent with advantage/disadvantage [1]		accept yes/no/don't know if fits with advantages/disadvantages
		ii	None	1	
	iii	iii	planets (around other stars)/extra solar planets / planets in other solar systems / planets similar to Earth [1]	1	<b>accept</b> this answer in the space for 1cii if no response
	d		supernova (1)	2	
			any <b>one</b> from (1);		
			(from a) super giant / very massive star		not just giant / massive
			idea of remnant/core/left over		e.g. formed after a supernova for 2 marks
			not massive enough to form a black hole		
				9	

Question	Answer	Mark	Guidance		
<b>2</b> * a	Canary Islands Chile	2			
b	<ul> <li>[Level 3]</li> <li>Gives two advantages and two disadvantages and suggests an appropriate alternative location with justification</li> <li>Quality of written communication does not impede communication of the science at this level.</li> <li>(5 – 6 marks)</li> <li>[Level 2]</li> <li>Gives three advantages and/or disadvantages and suggests an appropriate alternative location</li> <li>Quality of written communication partly impedes communication of the science at this level.</li> <li>(3 – 4 marks)</li> <li>[Level 1]</li> <li>Gives two of an advantage, a disadvantage, an appropriate alternative location</li> <li>Quality of written communication impedes communication of the science at this level.</li> <li>(1 – 2 marks)</li> <li>[Level 0]</li> <li>Insufficient or irrelevant science. Answer not worthy of credit.</li> <li>(0 marks)</li> </ul>	6	This question is targeted at grades up to C         Indicative scientific points may include:         advantages         Iow atmospheric pollution         Iess scattering of light         Iow light pollution         dry air/less humid         frequent cloudless nights/above the clouds         Iess absorption due to atmosphere         less refraction due to atmosphere         darker skies give more contrast         image/seeing is clearer/less blurred/less distorted         disadvantages         some absorption due to atmosphere         some parts of em spectrum absorbed by atmosphere         difficult working conditions e.g. access to services / altitu sickness         poor transport links         lack of local labour availability         high cost / difficult to build environmental impact         Appropriate alternative locations:         Location       justification         space/orbital       because less interference from atmosphere / can detect e gamma / x-ray / uv / (far)IR / microwave         underground for neutrinos       reduces interference         deserts       space for very large radio arrays / avoids radio/em	ə.g

Q	uesti	on	Answer	Mark	Guidance
3	а		sensible scale [1]	4	Allows points to cover greater than a third of the graph paper for x and y axes.
			correctly labelled x-axis (D) including units [1]		If axes swapped allow 1 mark if both are correctly labelled with units.
			correctly labelled y-axis (T) including units [1]		
			simple smooth curve through plotted points, must include 0,0 and 1,1 [1]		Do not accept straight line
	b	i	(yes)	2	
			straight line / constant gradient/rate [1] through origin [1] OR		
			one doubles the other doubles / x=y for all values / y=kx [2]		These each gain 2 marks
	b	ii	D <sup>3</sup> = 1.95	3	
			value of $T^2$ from graph = 1.95 or calculated from $D^3$		allow
			T = 1.39() or 1.4(0)		correct numerical answer gains 3 marks
	с	i	142 / 142.2(4) 142 / 141.6(1) [1]	2	Do not accept 142.00 for 1st marking point
			both to 3 sig figs OR both to two decimal places [1]		
		ii	Use of Saturn data from table [1] e.g. 868 ≈ 870 / 868÷870 ≈ 1 / 9.54 <sup>3</sup> ÷29.5 <sup>2</sup> ≈ 1	2	
			This mark can only awarded if the first marking point is awarded:		
			Explicit comparison to Kepler's relationship: [1] e.g.it fits ratio/relationships/gradient / is the same as the other planet(s) / Therefore/so it fits (relationship)		

Q	uestion	Answer		Guidance
4	d a	there is a correlation / correlation described [1]         might be something else causing both changes / a plausible         mechanism/explanation is also needed [1]         [Level 3]	2 6	<ul> <li>e.g. as distance increases, time decreases</li> <li>accept reverse arguments e.g. they don't orbit the same object.</li> <li>This question is targeted at grades up to A</li> </ul>
		Correct description of three methods <b>and</b> both links considered. Quality of written communication does not impede communication of the science at this level. (5 – 6 marks) [Level 2] Describes two methods <b>and</b> one link considered. Quality of written communication partly impedes communication of the science at this level. (3 – 4 marks)		Indicative scientific points may include: parallax • apparent movement against fixed stars • change over 6 months, opposite sides of orbit • greater distance smaller parallax (angle) Cepheid variable • luminosity linked to period • luminosity and apparent brightness give distance
		[Level 1] Correctly describes one method <b>or</b> one link considered. Quality of written communication impedes communication of the science at this level. (1 – 2 marks) [Level 0] Insufficient or irrelevant science. Answer not worthy of credit. (0 marks)		<ul> <li>Hubble law</li> <li>Distant galaxies moving faster</li> <li>Velocity of recession = H<sub>o</sub> x distance</li> <li>Greater redshift gives greater velocity</li> <li>Link</li> <li>Hubble law depends on Cepheid variable distances</li> <li>Cepheid variable (distances) depends on parallax distances</li> </ul>
				Use the L1, L2, L3 annotations in Scoris; do not use ticks.

Q	Question		n Answer		Guidance
	d	i	photons / radiation	2	do not accept light
			convection (currents)		
		ii	Photosphere	1	
		iii	5778 – 273 [1]	2	allow 1 mark for 6051
			5505		correct numerical answer gains full marks

Question	Answer		Guidance	
6	[Level 3]         Gives mathematical relationships, and explains how gravity results in decreased volume which increases the pressure and results in increasing temperature and gives conditions for fusion.         Quality of written communication does not impede communication of the science at this level.         (5 – 6 marks)         [Level 2]         Explains how gravity results in decreased volume which increases the pressure and results in increasing temperature and gives a condition for fusion.         Quality of written communication partly impedes communication of the science at this level.         (3 – 4 marks)         [Level 1]         Any 2 from Comments on temp, pressure and volume changes or describes the contraction of a protostar under gravity or gives condition for fusion.         Quality of written communication impedes communication of the science at this level.         (1 – 2 marks)         [Level 0]         Insufficient or irrelevant science. Answer not worthy of credit.         (0 marks)	6	<ul> <li>This question is targeted at grades up to A*</li> <li>Indicative scientific points may include:</li> <li>Gaseous behaviour: at level 3 <ul> <li>pressure α temperature/ P/T=constant</li> <li>pressure α 1/volume / PV=constant</li> </ul> </li> <li>at level 2 <ul> <li>temperature increase as pressure increase</li> <li>pressure increase as volume decrease.</li> </ul> </li> <li>at level 1 <ul> <li>reference to changes without specific links between pressure, temp and volume</li> <li>incorrect relationships between pressure, temp and volume</li> </ul> </li> <li>conditions for fusion <ul> <li>high temp</li> <li>high pressure</li> <li>hydrogen/protons must be forced together / overcome repulsion / more frequent/energetic collisions</li> </ul> </li> <li>formation of protostar <ul> <li>gravitational collapse / gas cloud particles attracted to centre of cloud</li> <li>allow temperature increases with smaller volume</li> </ul> </li> </ul>
