| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( a )}$ | Idea of a direct reading (without calculation) | (1) |

| Question <br> number | Answer |  |
| :--- | :--- | :--- |
| $\mathbf{1 ( b )}$ | If student B drops the ruler, they are not really measuring <br> their own reaction time as they know when ruler has been <br> dropped | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( c ) ( i )}$ | calculating the mean (1) <br> 18.36 <br> rounding to 2 s.f. (1) <br> $18(c m)$ | award full marks for <br> correct numerical <br> answer without working |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( c ) ( i i )}$ | Rearrangement (1) <br> $t=\sqrt{\frac{\text { distance }}{500}}$ <br> Substitution and answer (1) <br> time $=0.17$ (s)award full marks for <br> correct numerical answer <br> without working <br> allow answers which <br> round to 0.17, e.g. 0.1673 | (2) |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 1(d) | An explanation that combines <br> identification via a judgement <br> (1 mark) to reach a conclusion <br> via justification/reasoning <br> (1 mark): <br> - 25.5 is an anomalous result <br> (1) <br> (because) it is much further <br> away from the mean than the <br> other results (1) | ignore 19 |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( e )}$ | - Take more readings (1) <br> Idea that a third student should also measure the <br> reaction time (1) | (2) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( f )}$ | An answer that combines the <br> following points to provide a <br> logical description of the <br> plan/method/experiment: <br> - using a larger group of <br> students/large population of <br> students (1) <br> and measure how their <br> reaction time varies with <br> age/height (1) | allow any suitable <br> variable |  |

| Question <br> number | Ans | Mark |  |
| :--- | :--- | :--- | :--- |
| 2(a) | evidence that anomalous <br> reading excluded (1) <br> answer (1) <br> average length $=20.31(\mathrm{~mm})$ | accept 101.57 ( $\div 5)$ for <br> first mark <br> accept 20.314 (mm) | (2) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(b)(i) | •Axes with linear scales that <br> use more than half of each <br> edge of the grid and <br> labelled with units from <br> table (1) | All points correctly plotted <br> to $\pm$ half a square (1) <br> - Single straight line passing <br> through all points and the <br> origin (1) | allow 1 mark if only one <br> plotting error and correct line <br> drawn for points plotted |

| Question <br> number | Answer <br> 2(b)(ii)A comment that makes <br> reference to the following <br> points: <br> (using table) <br> idea that equal increments <br> of force/weight/mass <br> cause equal increments of <br> extension (1) <br> correct reference to figures <br> in the table (1) | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| OR <br> (using graph) <br> the graph line is straight <br> (1) <br> the graph line passes <br> through the origin (1) | AND <br> therefore the student's <br> conclusion is correct (1) | last marking point can only be <br> achieved if at least one of the <br> other two marks is awarded | (3) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(c) | An answer that combines points <br> of interpretation/evaluation to <br> provide a logical description: <br> above 37.5 N/4 mm there <br> are large increases of <br> extension for small <br> increases in load (1) <br> the maximum extension of <br> the wire is about 16.5 mm <br> before it breaks (1) <br> above 12 mm the wire <br> keeps on extending when <br> the load is reduced below <br> $46 \mathrm{~N} \mathrm{(1)}$ | accept extension is (much) <br> greater for each 1 N increase <br> in load above 37.5 N |  |
