

1 A scuba diver is on a sandy beach.

She checks her compressed air cylinders before a dive.

She has two identical steel cylinders, A and B.

Each cylinder contains the same amount of compressed air.

Figure 25 shows the diver's cylinders.

Figure 25

(a) Explain why cylinder A sinks further into the sand than cylinder B.

Use ideas about pressure, force and area in your answer.

(b) When underwater, the diver tries to move a large stone block.

The diver uses a long iron bar and a pivot, as shown in Figure 26.

When pushing down with a force of 120 N, the block is balanced.

Figure 26

Calculate the size of the force, F , of the bar on the block.

(3)

force = N

*(c) When the diver is swimming under water, she breathes out bubbles of gas, as shown in Figure 27.

Figure 27

The bubbles of gas rise to the surface.
The temperature of the gas does not change.

Explain what happens to a bubble as it rises to the surface.
Your answer should refer to gas equations, kinetic theory and particles.
