

Mark scheme – Wave Interaction (F)

Question			Answer/Indicative content	Marks	Guidance
1			A ✓	1 (AO2.2)	
			Total	1	
2			C ✓	1 (AO1.2)	<p>Examiner's Comments</p> <p>This question was answered correctly by the majority of the candidates. A small number of candidates opted for D</p>
			Total	1	
3	a		<p>Black ✓</p> <p>AND</p> <p>Any one from:</p> <p>Black because blue light absorbed by red paper ✓</p> <p>Black because red paper only reflects red light ✓</p> <p>Black because red paper absorbs all colours except red ✓</p> <p>Black because no light reflected from paper ✓</p>	2 (AO2×2.2)	<p>ALLOW dark without any colour</p> <p>Examiner's Comments</p> <p>Few candidates realised that the red paper would appear black in blue light. Candidates often thought that the red paper would look purple.</p> <p>Candidates that did state that the red paper appeared black and often reasoned that the red paper would absorb all the other colours.</p> <p> AfL</p> <p>Candidates should be encouraged to understand the adding and subtraction of colours and be able to explain light being absorbed at surfaces.</p>
	b	i	<p>Ray from prism: straight line (by eye) towards focal point ✓</p> <p>Ray from block: continues straight ✓</p>	2 (AO 2x1.2)	<p>IGNORE ray in prism</p> <p>IGNORE other rays</p> <p></p> <p>Examiner's Comments</p> <p>This question required candidates to use a ruler to draw straight lines. A number of candidates did not have a continuous</p>

					<p>straight line passing through the centre of the block.</p> <p>Candidates should be encouraged to read the question carefully. In this case there was no need to draw rays for the lower triangular block.</p>
		ii	<p>(in long sight) rays focused <u>behind</u> retina / eye (ball) / AW ✓</p> <p>Convex lens refracts light inwards / focuses light on the retina / AW ✓</p>	2 (AO 2x1.1)	<p>ALLOW near object focussed <u>behind</u> the retina / eye (ball) or eye (ball) is too short</p> <p>ALLOW converges / meet for focuses</p> <p>Examiner's Comments</p> <p>The explanations written by candidates were often vague. Candidates were expected to explain the meaning of long-sighted vision and then explain how the use of convex lens would focus the image on the retina.</p>
			Total	6	
4	a		<p>A (red) filter is needed ✓</p> <p>(The red filter) absorbs all colours/frequencies/wavelengths except red (light) ✓</p>	2(AO2 × 2.1)	<p>ALLOW The red filter absorbs blue and green (light/frequency/wavelength) (but not red)</p> <p>ALLOW the filter transmits red light <u>only</u> / <u>only</u> lets red (light/frequency/wavelength) through</p>
	b		<p>Either ray (centre ray or focal ray) drawn as indicated below ✓</p>  <p>Image upside down AND in the correct place ✓</p>	2 (AO2 × 2.2)	<p>ALLOW just one ray drawn</p> <p>If no rays drawn (or incorrect) but image is inverted, slightly larger and roughly in the correct place then award this mark</p> <p>IGNORE position of Y (if arrow is in the correct place)</p> <p>ALLOW tolerance of +/- 2 squares for image position</p>
