

- This question is about the greenhouse effect. The diagram below shows radiation from the Sun reaching the Earth and radiation leaving the Earth's surface.

The Earth's atmosphere affects these two radiations differently.

Describe how the radiation from the Sun is different from the radiation from the Earth, and explain how the atmosphere is responsible for the greenhouse effect.

*The quality of written communication will be assessed in your answer.*

2(a). This graph shows the amount of carbon dioxide in the atmosphere over a 1000 year period.

Many scientists think this is evidence that human activity has had an effect on the amount of carbon dioxide in the atmosphere.

Explain how the graph supports this idea.

[4]

(b). One of the effects of increasing carbon dioxide in the atmosphere is global warming and climate change.

Suggest some groups of people who are most at risk from global warming. For each group describe the risk.

3. The two graphs show changes in the Earth's atmosphere over the past 250 000 years.

The graphs show that there is a **correlation** between average temperature and carbon dioxide concentration.

How can you tell there is a correlation, and what is the **cause** of this correlation?

4. Margaret runs a small transport company.

She decides to review the possible fuel sources for her delivery trucks.

At present all her vehicles use petrol.

She finds the following table of information on the internet.

Fuel	Energy efficiency	CO <sub>2</sub> equivalent emission units	Cost of fuel per tonne
biogas	22%	20	similar for all three fuels
diesel	35%	750	
petrol	27%	740	

The data are given for equal masses of fuel.

She wants to take into account economic factors, sustainability and environmental impact.

Use the information in the table and your knowledge of energy sources to discuss the three fuel sources and make a recommendation about which one Margaret should use.

**[6]**

5(a). The graph below shows how the average temperature of the Earth and the concentration of carbon dioxide in the atmosphere have changed over the last 300 years.

Each point is marked with the year the readings were taken.

(i) In which **two** years was the carbon dioxide concentration greater than 300 parts per million?

----- and ----- [2]

(ii) In which years was the average temperature less than 13.8 °C?

----- [2]

(b). Five friends have been looking at the graph on the opposite page.

**Alice**  
There is a positive correlation between temperature and carbon dioxide concentration.

**Ben**  
Burning fossil fuels increases the carbon dioxide concentration.

**Chandra**  
Carbon dioxide concentration didn't change much until after 1900.

**Debra**  
I'm worried about the effects of global warming on the environment.

**Eddie**  
Carbon dioxide is a greenhouse gas. It makes the Earth absorb more of the Sun's radiation.

(i) Which two friends are **describing** the data shown in the graph?

Put ticks (✓) in the boxes next to the **two** correct names.

Alice

Ben

Chandra

Debra

Eddie

[2]

(ii) Which two friends are **explaining** the data shown in the graph?

Put ticks (✓) in the boxes next to the **two** correct names.

Alice

Ben	<input type="checkbox"/>
Chandra	<input type="checkbox"/>
Debra	<input type="checkbox"/>
Eddie	<input type="checkbox"/>

[2]

6(a).

The amount of carbon dioxide in the atmosphere stayed constant for a very long time.

Use the correct scientific terms to explain why the amount of carbon dioxide did not change.

-----

-----

-----

-----

[2]

(b). Over the last two hundred years, the amount of carbon dioxide in the atmosphere has increased steadily.

Write down **two** reasons for this increase.

**END OF QUESTION PAPER**

Question	Answer/Indicative content	Marks	Guidance
1	<p><b>(Level 3)</b> States at least one point describing either radiation from Earth or radiation from the Sun. <b>AND</b> states at least one relevant point about the greenhouse effect <b>AND</b> includes the idea that energy or radiation is trapped (in the atmosphere) Quality of written communication does not impede communication of the science at this level. (5 – 6 marks)</p> <p><b>(Level 2)</b> States a relevant point about the greenhouse effect <b>AND</b> includes the idea that energy or radiation is trapped (in the atmosphere) <b>OR</b> States at least one point describing either radiation from Earth or radiation from the Sun <b>AND</b> includes the idea that energy or radiation is trapped (in the atmosphere) <b>OR</b> States at least one point describing either radiation from Earth or radiation from the Sun <b>AND</b> states a relevant point about the greenhouse effect Quality of written communication partly impedes communication of the science at this level. (3 – 4 marks)</p> <p><b>(Level 1)</b> States at least one point describing either radiation from Earth or radiation from the Sun. <b>OR</b> States a relevant point about the greenhouse effect <b>OR</b> Includes the idea that energy or radiation is trapped (in the atmosphere) Quality of written communication impedes communication of the science at this level.  (1 – 2 marks)</p> <p><b>(Level 0)</b></p>	[6]	<p>This question is targeted at grades up to E</p> <p><b>Indicative scientific points related to difference in radiation from the Sun and Earth may include:</b></p> <ul style="list-style-type: none"> <li>• Sun's radiation includes visible/UV/other types of EM radiation</li> <li>• radiation emitted by Earth is infrared</li> <li>• radiation from the Sun has more energy /power/ intensity/is more ionising than radiation from the Earth</li> <li>• atmosphere does not absorb (much) light/radiation from Sun</li> <li>• atmosphere/greenhouse gases absorb radiation from Earth</li> <li>• Sun's radiation/light gives energy for plants/photosynthesis</li> </ul> <p><b>Indicative scientific points related to the greenhouse effect may include:</b></p> <ul style="list-style-type: none"> <li>• If energy in &gt; energy out Earth will heat up</li> <li>• Earth's radiation is absorbed.</li> <li>• Sun's radiation is transmitted</li> <li>• atmosphere/gases absorb infrared/radiation from Earth</li> <li>• these (greenhouse) gases include carbon dioxide (and methane &amp; water)</li> <li>• this results in global warming</li> </ul> <p><b>Example of ideas of energy/radiation is trapped</b></p> <ul style="list-style-type: none"> <li>• 'Radiation from the Sun cannot escape'</li> <li>• 'Prevents radiation from the Sun leaving'</li> <li>• 'Heat is trapped'</li> </ul> <p><b>Use the L1, L2, L3 annotations in Scoris; do not use ticks.</b></p> <p><b>Examiner's Comments</b></p> <p>For the first part of the question many candidates offered the information that the Sun's radiation contained ultraviolet, some said that it contained more energy. Some</p>

Question			Answer/Indicative content	Marks	Guidance
			<p>Insufficient or irrelevant science. Answer not worthy of credit.</p> <p>(0 marks)</p>		<p>candidates have the overall idea of the greenhouse effect – that this is an effect which traps some radiation, or heat – others can tell you that carbon dioxide is a greenhouse gas and that the Earth is warming up and there is some connection between the two – but they do not appear to have any idea what the connection is. Although this question was targeted at lower ability candidates, it was clear that this is an idea that is very poorly understood below C grade. A lot of candidates thought that the greenhouse gases were trapped in the atmosphere and could not escape. Some said that the Earth's radiation was carbon dioxide, or pollution, and some went on to say this was trapped by the ozone layer.</p>
