**Paper 1: Social and Cognitive Psychology**

Sample assessment material for first teaching  
September 2015

**Time: 1 hour 30 minutes**

Paper Reference

**WPS01/01**

**You do not need any other materials.**

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

## Information

- The total mark for this paper is 64.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- The list of formulae and critical value tables are printed at the start of this paper.
- Candidates may use a calculator.

## Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

## FORMULAE AND CRITICAL VALUE TABLES

### Standard deviation (sample estimate)

$$\sqrt{\left(\frac{\sum(x - \bar{x})^2}{n - 1}\right)}$$

### Spearman's rank correlation coefficient

$$1 - \frac{6 \sum d^2}{n(n^2 - 1)}$$

### Critical values for Spearman's rank

N	Level of significance for a one-tailed test				
	0.05	0.025	0.01	0.005	0.0025
	Level of significance for a two-tailed test				
	0.10	0.05	0.025	0.01	0.005
5	0.900	1.000	1.000	1.000	1.000
6	0.829	0.886	0.943	1.000	1.000
7	0.714	0.786	0.893	0.929	0.964

**The calculated value must be equal to or exceed the critical value in this table for significance to be shown.**

### Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

### Critical values for the Wilcoxon Signed Ranks test

	Level of significance for a one-tailed test		
	0.05	0.025	0.01
	Level of significance for a two-tailed test		
<i>n</i>	0.1	0.05	0.02
N=5	0	-	-
6	2	0	-
7	3	2	0
8	5	3	1
9	8	5	3
10	11	8	5
11	13	10	7
12	17	13	9

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

## SECTION A

**Answer ALL questions. Write your answers in the spaces provided.**

- 1 (a) Chetna wanted to investigate levels of conformity in her local library. She staged a study where confederates were either silent (condition one) or noisy (condition two). For each condition she recorded how many of the other library users made a noise. She interviewed each library user after each condition, and asked them how they felt about the noise in the library, and about their own noise levels. The interviews were conducted one day apart.

Explain **one** ethical issue that Chetna would need to consider before she recruited participants for her investigation.

(2)

.....

.....

.....

.....

- (b) Chetna chose to gather both qualitative and quantitative data for her investigation into levels of conformity.

Define the term 'qualitative data'.

(1)

.....

.....

- (c) State **two** ways in which Chetna gathered qualitative data to investigate non-conformity in her study.

(2)

1 .....

2 .....

- (d) Chetna used an experimental method when she set up the two conditions.  
Explain an appropriate experimental design for this part of her study.

(3)

.....

.....

.....

.....

.....

.....

- (e) **Table 1** is a tally chart showing conformity in silent and noisy conditions.

	Condition one	Condition two
Conforming behaviour	### ### II	### ### ### I
Non-conforming behaviour	II	IIII

**Table 1**

Calculate the percentage of non-conforming behaviour in condition two of Chetna's investigation.

(1)

**(Total for Question 2 = 9 marks)**

## SECTION B

Answer ALL questions. Write your answers in the spaces provided.

- 4 Mr Evans conducted an experiment to test the multi-store model of memory. He gave his class two lists of words to remember; 'list one' on Monday and 'list two' on Friday. He presented each list one word at a time for one second on a whiteboard.

Below are the lists of words shown to the class.

List one	List two
Frog	Big
Dog	Large
Log	Huge
Hog	Great
Blog	Vast
Fog	Giant

- (a) Mr Evans used immediate recall and delayed recall.

Explain the purpose of using immediate **and** delayed recall as a way of testing the multi-store model of memory.

(2)

.....

.....

.....

.....

(b) **Table 2** shows the results of Mr. Evans's memory test.

	List one		List two	
	Immediate recall	Delayed recall	Immediate recall	Delayed recall
<b>Participant A</b>	2	5	5	2
<b>Participant B</b>	3	4	6	3
<b>Participant C</b>	4	5	4	2
<b>Participant D</b>	2	3	5	4
<b>Participant E</b>	3	4	6	2
<b>Participant F</b>	4	6	6	2
<b>Participant G</b>	1	3	4	3
<b>Participant H</b>	2	4	5	2
<b>Participant I</b>	3	4	5	5
<b>Participant J</b>	3	5	6	2

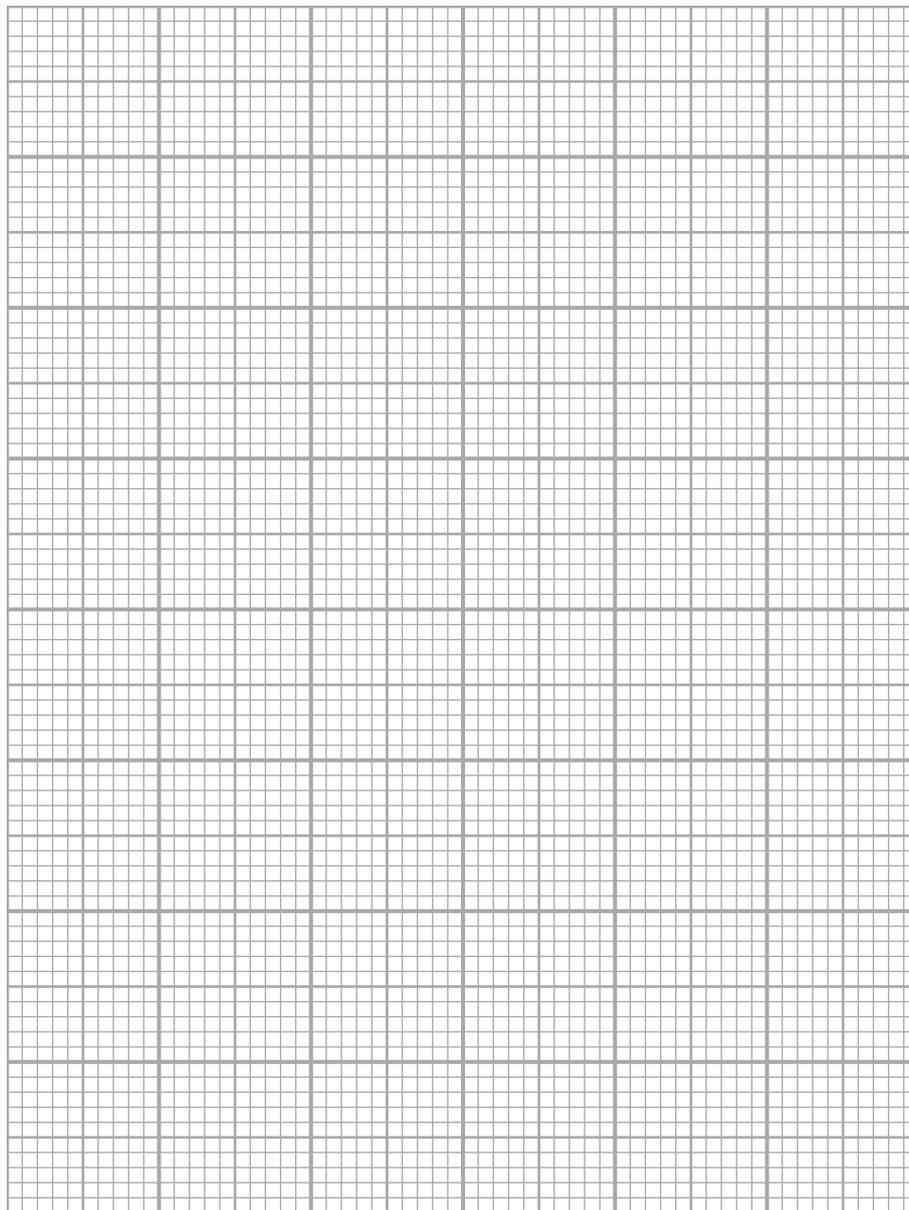

**Table 2**

Using the data in **Table 2**, draw a histogram to illustrate the frequency of the immediate recall of words in list one.

You should title and label your histogram appropriately.

- (c) Calculate the average immediate recall of list two, using an appropriate measure of central tendency.

(1)

- (d) A Wilcoxon Signed Ranks test was used to calculate statistical significance for delayed recall. The calculated (T) value was 4 ( $T=4$ ) for a one-tailed test at  $p<0.05$  with  $N=9$ .

Determine whether this result is significant or not.

The critical value table can be found in the formulae and statistics table at the front of the paper.

(1)

- (e) Explain the findings of Mr. Evans's study, using your knowledge of encoding in short-term memory **and** long-term memory described by the multi-store model of memory.
