**Pearson Edexcel International Advanced Level**

**Friday 2 June 2023**

Afternoon (Time: 1 hour 30 minutes)

Paper reference **WPS03/01**

**Psychology**

**International Advanced Level**

**UNIT 3: Applications of Psychology**

You do not need any other materials.

Total Marks

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section A, and **ALL** questions from **EITHER** Option 1 criminological psychology **OR** Option 2 health psychology.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

### Information

- The total mark for this paper is 64.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- The list of formulae and statistical tables are printed at the start of this paper.
- Candidates may use a calculator.

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

## FORMULAE AND STATISTICAL TABLES

### Standard deviation (sample estimate)

$$\sqrt{\left(\frac{\sum(x - \bar{x})^2}{n - 1}\right)}$$

### Spearman's rank correlation coefficient

$$1 - \frac{6 \sum d^2}{n(n^2 - 1)}$$

### Critical values for Spearman's rank

Level of significance for a one-tailed test					
	0.05	0.025	0.01	0.005	0.0025
Level of significance for a two-tailed test					
N	0.10	0.05	0.025	0.01	0.005
5	0.900	1.000	1.000	1.000	1.000
6	0.829	0.886	0.943	1.000	1.000
7	0.714	0.786	0.893	0.929	0.964
8	0.643	0.738	0.833	0.881	0.905
9	0.600	0.700	0.783	0.833	0.867
10	0.564	0.648	0.745	0.794	0.830
11	0.536	0.618	0.709	0.755	0.800
12	0.503	0.587	0.678	0.727	0.769
13	0.484	0.560	0.648	0.703	0.747
14	0.464	0.538	0.626	0.679	0.723
15	0.446	0.521	0.604	0.654	0.700
16	0.429	0.503	0.582	0.635	0.679
17	0.414	0.485	0.566	0.615	0.662
18	0.401	0.472	0.550	0.600	0.643
19	0.391	0.460	0.535	0.584	0.628
20	0.380	0.447	0.520	0.570	0.612
21	0.370	0.435	0.508	0.556	0.599
22	0.361	0.425	0.496	0.544	0.586
23	0.353	0.415	0.486	0.532	0.573
24	0.344	0.406	0.476	0.521	0.562
25	0.337	0.398	0.466	0.511	0.551
26	0.331	0.390	0.457	0.501	0.541
27	0.324	0.382	0.448	0.491	0.531
28	0.317	0.375	0.440	0.483	0.522
29	0.312	0.368	0.433	0.475	0.513
30	0.306	0.362	0.425	0.467	0.504

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

## Chi-squared distribution formula

$$\chi^2 = \sum \frac{(O-E)^2}{E}$$

$$df = (r - 1)(c - 1)$$

## Critical values for chi-squared distribution

Level of significance for a one-tailed test						
	0.10	0.05	0.025	0.01	0.005	0.0005
Level of significance for a two-tailed test						
df	0.20	0.10	0.05	0.025	0.01	0.001
1	1.64	2.71	3.84	5.02	6.64	10.83

26	31.80	35.56	38.89	41.92	45.64	54.05
27	32.91	36.74	40.11	43.20	46.96	55.48
28	34.03	37.92	41.34	44.46	48.28	56.89
29	35.14	39.09	42.56	45.72	49.59	58.30
30	36.25	40.26	43.77	46.98	50.89	59.70
40	47.27	51.81	55.76	59.34	63.69	73.40
50	58.16	63.17	67.51	71.42	76.15	86.66
60	68.97	74.40	79.08	83.30	88.38	99.61
70	79.72	85.53	90.53	95.02	100.43	112.32

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

### Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

### Critical values for the Wilcoxon Signed Ranks test

<i>n</i>	Level of significance for a one-tailed test		
	0.05	0.025	0.01
	Level of significance for a two-tailed test		
	0.1	0.05	0.02
N=5	0	-	-
6	2	0	-
7	3	2	0
8	5	3	1
9	8	5	3
10	11	8	5
11	13	10	7
12	17	13	9

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

2 Natasha is a child psychologist. She was asked to investigate the effectiveness of a new scheme to help parents who found it hard to securely attach to their babies. Natasha counted the number of interactions parents had with their babies before and after taking part in the new scheme.

- Condition A: The parents' interactions with their babies before they took part in the new scheme.
- Condition B: The same parents' interactions with their babies after they took part in the new scheme.

The mean number of interactions for each condition was calculated by Natasha.

Her results are shown in **Table 1**.

Condition A	Condition B

- 5 Helene investigated the effectiveness of a new play scheme. The play scheme aims to improve the emotional and cognitive development in children from a deprived area.

Helene measures the development of the children when they start the play scheme, after three months and then after a year. She observes the children and tallies behaviours that indicate emotional and cognitive development.

Helene also uses questionnaires with open and closed questions, which she devised herself. The questionnaires are given to parents of the children and workers at the play scheme.

After analysing her results, Helene found that the play scheme did improve the emotional and cognitive development of most of the children after three months and there was further improvement a year later.

Discuss whether Helene's investigation is scientific.

You must make reference to the context in your answer.

7 Anatole conducted an experiment to see if self-fulfilling prophecy affected participants' perceptions of how likely someone is to commit theft from a shop.

- Condition A: ten participants were given a scenario about a person who came from a wealthy area.
- Condition B: nine different participants were given the same scenario but the person came from a deprived area.

Anatole then asked his participants to say whether the person in the scenario would commit a theft from a shop or not.

(a) Describe the experimental/research design Anatole used in his experiment.

(2)

---

---

---

---

---

---

---

The results from Anatole's experiment are shown in **Table 2**.

Condition	Number of participants who said the person would commit the theft	Number of participants who said the person would not commit the theft
The scenario said the person came from a wealthy area.	3	7
The scenario said the person came from a deprived area.	8	1

**Table 2**

- (b) Calculate the percentage of participants who said the person would commit the theft, out of all participants.

You **must** give your answer to **one** decimal place.

- 9 Greg is a criminological psychologist who was asked to create a psychological (case) formulation on Mary who did not engage with any therapies she was offered whilst in prison. Greg had several sessions with Mary to find out details about her past and present relationships. He also asked her about her current economic and social circumstances. During the psychological (case) formulation Greg also found out how Mary interprets her current and past circumstances.

Based on the psychological (case) formulation Greg was able to recommend further therapies that he thought would be more successful for Mary.

Explain **one** strength and **one** weakness of Greg using a psychological formulation for Mary.
