International Advanced Level  
Paper 3: Applications of Psychology

Thursday 26 October 2017 – Afternoon <b>Time: 1 hour 30 minutes</b>	Paper Reference <b>WPS03/01</b>
--	------------------------------------

<b>You do not need any other materials.</b>	Total Marks
---	-------------

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **ALL** questions in Section A, and **ALL** questions from **EITHER** Option 1 criminological psychology **OR** Option 2 health psychology.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

### Information

- The total mark for this paper is 64.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- The list of formulae and statistical tables are printed at the start of this paper.
- Candidates may use a calculator.

### Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

## FORMULAE AND STATISTICAL TABLES

### Standard deviation (sample estimate)

$$\sqrt{\left(\frac{\sum(x - \bar{x})^2}{n - 1}\right)}$$

### Spearman's rank correlation coefficient

$$1 - \frac{6 \sum d^2}{n(n^2 - 1)}$$

### Critical values for Spearman's rank

N	Level of significance for a one-tailed test				
	0.05	0.025	0.01	0.005	0.0025
N	Level of significance for a two-tailed test				
	0.10	0.05	0.025	0.01	0.005
5	0.900	1.000	1.000	1.000	1.000
6	0.829	0.886	0.943	1.000	1.000
7	0.714	0.786	0.893	0.929	0.964
8	0.643	0.738	0.833	0.881	0.905
9	0.600	0.700	0.783	0.833	0.867
10	0.564	0.648	0.745	0.794	0.830
11	0.536	0.618	0.709	0.755	0.800
12	0.503	0.587	0.678	0.727	0.769
13	0.484	0.560	0.648	0.703	0.747
14	0.464	0.538	0.626	0.679	0.723
15	0.446	0.521	0.604	0.654	0.700
16	0.429	0.503	0.582	0.635	0.679
17	0.414	0.485	0.566	0.615	0.662
18	0.401	0.472	0.550	0.600	0.643
19	0.391	0.460	0.535	0.584	0.628
20	0.380	0.447	0.520	0.570	0.612
21	0.370	0.435	0.508	0.556	0.599
22	0.361	0.425	0.496	0.544	0.586
23	0.353	0.415	0.486	0.532	0.573
24	0.344	0.406	0.476	0.521	0.562
25	0.337	0.398	0.466	0.511	0.551
26	0.331	0.390	0.457	0.501	0.541
27	0.324	0.382	0.448	0.491	0.531
28	0.317	0.375	0.440	0.483	0.522
29	0.312	0.368	0.433	0.475	0.513
30	0.306	0.362	0.425	0.467	0.504

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

**Chi-squared distribution formula**

$$X^2 = \sum \frac{(O-E)^2}{E}$$

$$df = (r - 1)(c - 1)$$

**Critical values for chi-squared distribution**

df	Level of significance for a one-tailed test					
	0.10	0.05	0.025	0.01	0.005	0.0005

70	79.72	85.53	90.53	95.02	100.43	112.32

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

### Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

### Critical values for the Wilcoxon Signed Ranks test

	Level of significance for a one-tailed test		
	0.05	0.025	0.01
	Level of significance for a two-tailed test		
<b>N</b>	0.1	0.05	0.02
N=5	0	-	-
6	2	0	-
7	3	2	0
8	5	3	1
9	8	5	3
10	11	8	5
11	13	10	7
12	17	13	9

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

**(Total for Question 1 = 4 marks)**

- 2 Samad and Amna investigated attachment in infants aged one to two years old using Ainsworth's strange situation procedure. The sample comprised of 20 families where both parents were in full-time employment.

**Table 1** shows results for the observed reunion behaviour.

	Reunion behaviour		
	Infant shows positive and happy responses when caregiver returns	Infant approaches caregiver, but resists contact, may even push them away	Infant shows little interest when caregiver returns
<b>% of infants</b>	70	15	15

**Table 1**

- (a) Give **one** conclusion that could be made from this investigation.

(1)

.....

.....

- (b) Ainsworth suggested the 'caregiver sensitivity' hypothesis as an explanation for different attachment types.

Define what is meant by 'caregiver sensitivity'.

(1)

.....

.....

- (c) Describe the research methodology used by Samad and Amna in their investigation.

(2)

.....

.....

.....

.....

.....

.....

.....

(d) The strange situation procedure has been used cross-culturally.

Explain **one** reason why cross-cultural research is carried out when studying children.

- 13** Agnetha and Jon researched the link between coping strategies and anxiety. Group A participants were given appraisal focusing strategies to use. Group B participants were given problem focusing strategies to use.

Participants self-rated their anxiety levels using a score out of ten, with ten being high anxiety. Scores were recorded in relation to three scenarios that were given to participants before and after trialling the coping strategy.

The results of the research are shown in **Table 4**.

Scenario	Mean decrease in anxiety levels in Group A (appraisal focusing)	Mean decrease in anxiety levels in Group B (problem focusing)
Crowded room	6.31	7.97
Late for work	6.20	6.46
Lost their keys	4.12	5.84
