# Psychology

**International Advanced Level**

**Paper 3: Applications of Psychology**

Sample assessment materials for first teaching  
September 2015

**Time: 1 hour and 30 minutes**

Paper Reference

**WPS03/01**

**You do not need any other materials.**

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section A, and **all** questions from **EITHER** Option 1 criminological psychology **OR** Option 2 health psychology.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

## Information

- The total mark for this paper is 64.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- The list of formulae and critical value tables are printed at the start of this paper.
- Candidates may use a calculator.

## Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

## FORMULAE AND STATISTICAL TABLES

### Standard deviation (sample estimate)

$$\sqrt{\left(\frac{\sum(x - \bar{x})^2}{n - 1}\right)}$$

### Spearman's rank correlation coefficient

$$1 - \frac{6 \sum d^2}{n(n^2 - 1)}$$

### Critical values for Spearman's rank

	Level of significance for a one-tailed test				
	0.05	0.025	0.01	0.005	0.0025
	Level of significance for a two-tailed test				
<i>N</i>	0.10	0.05	0.025	0.01	0.005
5	0.900	1.000	1.000	1.000	1.000
6	0.829	0.886	0.943	1.000	1.000
7	0.714	0.786	0.893	0.929	0.964
8	0.643	0.738	0.833	0.881	0.905
9	0.600	0.700	0.783	0.833	0.867
10	0.564	0.648	0.745	0.794	0.830
11	0.536	0.618	0.709	0.755	0.800
12	0.503	0.587	0.678	0.727	0.769
13	0.484	0.560	0.648	0.703	0.747
14	0.464	0.538	0.626	0.679	0.723
15	0.446	0.521	0.604	0.654	0.700
16	0.429	0.503	0.582	0.635	0.679
17	0.414	0.485	0.566	0.615	0.662
18	0.401	0.472	0.550	0.600	0.643
19	0.391	0.460	0.535	0.584	0.628
20	0.380	0.447	0.520	0.570	0.612
21	0.370	0.435	0.508	0.556	0.599
22	0.361	0.425	0.496	0.544	0.586
23	0.353	0.415	0.486	0.532	0.573
24	0.344	0.406	0.476	0.521	0.562
25	0.337	0.398	0.466	0.511	0.551
26	0.331	0.390	0.457	0.501	0.541
27	0.324	0.382	0.448	0.491	0.531
28	0.317	0.375	0.440	0.483	0.522
29	0.312	0.368	0.433	0.475	0.513
30	0.306	0.362	0.425	0.467	0.504

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

### Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

### Critical values for the Wilcoxon Signed Ranks test

	Level of significance for a one-tailed test		
	0.05	0.025	0.01
	Level of significance for a two-tailed test		
<i>n</i>	0.1	0.05	0.02
N=5	0	-	-
6	2	0	-
7	3	2	0
8	5	3	1
9	8	5	3
10	11	8	5
11	13	10	7
12	17	13	9

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

## SECTION A

Answer ALL questions. Write your answers in the spaces provided.

- 1 (a) Jacob was teaching his younger brother how to complete a puzzle. Jacob's younger brother had not seen a puzzle before.

Using your knowledge of Vygotsky's theory of cognitive development, describe **one** way in which Jacob could teach his brother to complete a puzzle.

(2)

.....

.....

.....

.....

- (b) Explain **one** reason why Vygotsky's theory of cognitive development could be considered a better way of teaching Jacob's brother to complete a puzzle compared to Piaget's theory.

**QUESTION 2 BEGINS ON THE NEXT PAGE.**

- 2 Claude investigated Erikson's psychosocial stages of development using a questionnaire. Claude was particularly interested to see whether teachers and charity workers showed a greater level of caring compared to other participants. The level of caring was measured by a scoring system, where a high score related to a greater level of caring shown by the participant.

Claude scored each participant on traits of generativity and stagnation. Participants with generativity traits were given a high score and those with stagnation traits given a low score.

**Table 1** shows the mean scores in the investigation.

	<b>Teachers and charity workers</b> <b>(Mean age 40 years)</b>	<b>Other participants</b> <b>(Mean age 40 years)</b>
<b>Mean score (out of 20)</b>	14	8
<b>Standard deviation</b>	4	1.2

**Table 1**

- (a) Interpret the data in **Table 1**.

(2)

.....

.....

.....

.....

- (b) State what Erikson meant by generativity.

**(Total for Question 2 = 6 marks)**

- 3 (a) A study looked at the relationship between the security of infant attachment and factors such as infant temperament (negative emotions and positive mood), maternal sensitivity (the amount the mother responded to the child's needs) and parental confidence in their child-rearing skills.

The data was gathered using questionnaires with the mothers. The correlation co-efficients, along with an indication of the levels of significance, are shown in **Table 2**.

Note: \* =  $p < 0.05$ , \*\* =  $p < 0.01$

	Infant positive mood	Parental confidence	Maternal sensitivity	Infant attachment security
Infant positive mood	-	-0.26*	0.50**	0.44**
Parental confidence	0.26*	-	-0.17	0.24*
Maternal sensitivity	0.50**	-0.17	-	0.32*
Infant attachment security	0.44**	0.24*	0.32*	-

**Table 2**

Give the number of significant findings in **Table 2**.

(1)

**QUESTION 7 BEGINS ON THE NEXT PAGE.**

- 7 (a) Amelie and Kai undertook research to explore the accuracy of eyewitness testimony. They asked each participant 20 questions about what they saw during a film clip of a street robbery. The questions required a 'Yes/No' response, and they recorded whether participants' responses were correct or incorrect.

The results of the study are shown in **Table 3**.

Participant	Number of correct responses	Number of incorrect responses
A	14	6
B	10	10
C	16	4
D	15	5
E	12	8
F	16	4
G	9	11
H	18	2
<b>Total</b>	<b>110</b>	<b>50</b>

**Table 3**

Calculate the range of correct responses given by the participants.

(1)

- (b) Amelie and Kai overheard two participants saying they had guessed the answers, responding 'Yes' or 'No' randomly to the questions, as this would give them a 50:50 chance of being correct.

Calculate the percentage of participants that showed greater accuracy than if they had been guessing the answer.
